the best way of making yourself "first class" from the point of view of personal efficiency is to train your mind by means of Pelmanism.

Pelmanism eliminates the feelings of Frustration and Inferiority, and many other weaknesses as well. So why suffer from these mental failings any longer?

Pelmanism develops and strengthens your Will-Power, your Determination and your powers of Initiative and Concentration. Whatever your age, whatever your occupation, Pelmanism will free your mind from unhappy conditions and change for the better your whole outlook on life.

Remember—Everything you do is preceded by your attitude of mind

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian. Write for particulars and specimen lesson of the language that interests you, which will be sent gratis.

**Pelman Languages Institute,
200, Norfolk Mansions, Wigmore Street
London W.1**

applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

The Pelman Course is simple and interesting and takes up very little time. The lesson-books are printed in a handy pocket-size enabling you to study them while travelling or in spare moments during the day. You can enrol on the most convenient terms. The Course is fully described in a book entitled *The Science of Success*, which will be sent you, gratis and post free, on application to:—

Shorter Edition, Orange Paper Cover, 694 pages — 12s. 6d. net

PREFACE TO THE 89TH ANNUAL

(1957)

In this 89th volume of "WHITAKER", in addition to the many new features, number of the basic sections have been re-shaped. For example, the Parliamentary Constituencies are now presented alphabetically, with full cross references, in a form which, it is thought, will prove more convenient to the general reader.

Information about Civil Aviation in the United Kingdom has been greatly augmented. Lists are published for the first time of airfields available to civil aircraft, of independent British air transport companies, and of the principal Commonwealth and foreign lines operating in this country.

The increasing public interest throughout the country in historic houses has prompted a concise list of the principal houses open to the public, with information on hours of opening and charges for admission. More complete descriptions about houses in the immediate neighbourhood of London continue to be given.

The new rates of pay for all ranks of the three services, which came into force last April, and the new principles governing them, have caused the re-introduction after a number of years of full tables showing the present details of Service pay, including that of National Service officers.

A special section has been incorporated in the Diary of Events dealing with the Suez Canal crisis, a subject which has also received due attention in the illustrations section, which is once more a feature of the Almanack.

The general information about Trade Unions and Employers' Associations has been rearranged and grouped together for convenience with the list of Unions in the "Directory" part of the book.

The Municipal Directory shows the new and greatly increased figures of Rateable Value in the various local authority areas in England and Wales, and particulars of Party Representation in the London Boroughs have been added to those already given for the rest of England.

A list of the governing bodies of British sport has been added to the Sports section, and the Editor is especially grateful to the Central Council of Physical Recreation for co-operation in its compilation.

Once more the Almanack records alterations of status in the international sphere, and new articles on Tunisia and the Sudan, in their recently acquired position as independent states, are included. The changing scene in Morocco and Indo-China, as well as in many countries of the British Commonwealth, has also been fully depicted.

The Editor would once again express his thanks to all those who have corresponded with him during the year, and who by their kind compliance with his requests for information or by their suggestions, large or small, have again contributed very materially to the value of the Almanack.

*Local Organisers and
Collectors give their help free*

One day in the year—Poppy Day—is devoted to Haig's Fund. Upon the money collected depends—to a great extent—the existence of the largest welfare organisation of its kind in the world. The needs of the ex-service community do not lessen with the years and Poppy Day donations cannot alone finance current commitments and the urgent expansion programmes at present under way. Will you therefore please remind your clients that legacies and bequests in favour of Haig's Fund are of paramount importance.

BRITISH LEGION HAIG'S FUND

(Registered under the War Charities Act, 1940)

Success through service...

It started with a single office in Perth, Scotland. And in less than three generations the 'General Accident' has become one of the greatest Insurance Companies in the world. An almost phenomenal achievement—but the result of very natural causes, for an ever-widening circle of clients finds that the 'General Accident' offers more efficient service and more generous terms than are obtainable elsewhere. The Bonus Scheme on Fire and Household Policies is only one example of the special advantages available from the 'General Accident'.

The outstanding success of the 'General Accident' was built—and is still being built—on a reputation for service that is second to none . . .

General Accident

The ASSOCIATION of PRACTISING and COMMERCIAL ACCOUNTANTS LIMITED (BY GUARANTEE)

Fellows and Associates are entitled to use the designatory letters—F.P.C.A., and A.P.C.A., and to describe themselves as Associated Public Accountants. Examinations are held in June and December and the Syllabus of Examinations and Conditions of Membership will be sent without charge upon application to

THE SECRETARY, 334 KING STREET, LONDON, W.6
Riverside 2694

The FACULTY of SECRETARIES LIMITED (BY GUARANTEE)

Founded in 1930 the Faculty provides a central organisation for Secretaries and Administrative Officers of Public Bodies and Local Government Authorities, and is well represented both at home and abroad including South Africa where there is a large membership.

The examinations have been widely recognised by the Ministry of Labour and by Public and Municipal Undertakings.

Fellows and Associates use the Qualifying letters F.F.C.S., and A.F.C.S., and the distinctive title of "Corporate Secretary".

The official journal is "The Corporate Secretary" published quarterly.

Regulations as to admission to membership, examination syllabus, etc. can be obtained from:

THE REGISTRAR, DEPT. W., G.P.O. BOX 9, GUILDFORD

REED'S SCHOOL

(Founded 1813)

SANDY LANE, COBHAM, SURREY

- ★ An Independent Boarding Grammar School for fatherless boys.
- ★ Recognised by the Ministry of Education.
- ★ Foundationers granted considerable reductions (even up to full fees).
- ★ Enquiries about the work of the school are always welcome.

PHILIP HORTON, Secretary

32 QUEEN VICTORIA STREET, E.C.4

Telephone: CITY 3625

OCCURRENCES DURING PRINTING

The Royal Family and Court

- Oct. 1.—Princess Margaret sailed from Mauritius in *Britannia* after three days' stay.
 Oct. 5.—She arrived in Zanzibar for two days' visit.
 Oct. 8.—The Princess landed at Dar es Salaam, where she opened the new deep-water berths.
 Oct. 9.—The Queen returned from Balmoral with her children, and in the evening went with the Duke of Edinburgh to the Duke of Kent's 21st birthday party.
 Oct. 10.—The Queen and the Duke of Edinburgh attended the Horse of the Year Show at Harringay.
 Oct. 15.—The Duke of Edinburgh left London Airport on first stage of his four-month world tour.
 Oct. 17.—The Queen opened the world's first large-scale nuclear power station at Calder Hall, Cumberland.

Politics and Official

- Oct. 2.—At Labour Party Conference at Blackpool, Mr. Aneurin Bevan was elected Treasurer of the Party by majority of 274,000 over his nearest opponent, Mr. George Brown.
 Oct. 11.—Mr. Sandys told Conservative Party Conference at Llandudno that Government had decided on progressive abolition of rent control.
 Oct. 18.—It was announced that Sir Walter Monckton, Minister of Defence, had resigned, but would remain in the Cabinet as Paymaster-General, an office vacant since Dec. 1955. The membership of the Cabinet was thus increased from 18 to 19. Mr. A. H. Head succeeded Sir Walter as Minister of Defence, Mr. J. H. M. Hare became Secretary of State for War in place of Mr. Head and Mr. J. S. MacLay Minister of State for Colonial Affairs in place of Mr. Hare.

Sir Frederick Hoyer Millar, British Ambassador in Bonn, was appointed to succeed Sir Ivone Kirkpatrick as Permanent Under-Secretary, Foreign Office, upon the latter's retirement in Feb., 1957.

Education

- Oct. 12.—Lord Nuffield gave £100,000 to establish a chair of dental research in the new department of Dental Science at the Royal College of Surgeons.

Legal

- Oct. 8.—Manchester Crown Court opened by Lord Goddard.

Aviation

- Oct. 1.—R.A.F. Vulcan bomber crashed while coming in to land at London Airport on return from record-breaking flight to Australia and New Zealand. Four members of crew of six were killed.
 Oct. 10.—All nine members of crew of R.A.F. twin-engined Neptune bomber killed when it crashed on mountainside at Mull of Kintyre.
 Oct. 11.—U.S.A.F. Liftmaster reported missing between Lakenheath, Suffolk and the Azores with 50 passengers and crew of 9 on board.

Accidents

- Oct. 13.—Six soldiers died as result of head-on collision between two trains on Longmoor military railway, Hampshire.

Commonwealth

- Oct. 8.—Greek Cypriot sentenced to death for murder of a British sergeant.
 Oct. 10.—Singapore Government ordered dismissal of two teachers, expulsion of 140 pupils and banning of all assemblies in schools.
 Oct. 10 and 11.—Serious rioting in Kowloon, Hong Kong, during the celebration of the Chinese Nationalist "Double Tenth" Day. Some 45 persons were killed, and more than 3,000 arrested.
 Oct. 11.—Britain's first atom bomb to be dropped from an aircraft was released by an R.A.F. Valiant over Maralinga, S. Australia.
 Oct. 12.—Britain gave notice that she would raise at the U.N. General Assembly the question of support from Greece for terrorism in Cyprus.

Foreign and International

- Oct. 7.—Four Free People's Party members of Dr. Adenauer's cabinet, Herr Blücher, Herr Neumayer, Dr. Preusker and Dr. Schafer, resigned.
 Oct. 8.—Eight-power conference opened at Fedala, near Casablanca, to discuss the future of Tangier. Prince Moulay ben el Mehdi Alaoui appointed first Moroccan Ambassador in London.
 Two Polish youths sentenced to 4½ year's imprisonment and another to four years for being concerned in the death of a policeman during the Poznan riots in June.
 Oct. 9.—Mr. Hilary Minc, first deputy Premier of Poland, asked to be relieved of his duties.
 Oct. 11.—Heavy fighting between Israel and Jordan frontier troops, with casualties on both sides.
 Oct. 12.—After political crisis lasting four months, Dr. Drees formed a reconstructed Dutch Cabinet with members of four parties.
 Oct. 18.—Nobel Prize for Medicine awarded jointly to Prof. André Cournand and Prof. Dickinson Richards, of the U.S.A., and Dr. Werner Forssmann of West Germany.

Suez Crisis

- Oct. 1.—First meeting of Canal Users' Association at which it was decided to set up three committees: organizational, operational and financial.
 Oct. 5.—Security Council met to discuss Suez problem. M. Pineau and Mr. Selwyn Lloyd put case for Western powers.
 Oct. 8.—U.S.S.R. and Egyptian delegates at Security Council contested Western case and made joint proposal for a negotiating body.
 Oct. 9.—Statement from 10 Downing Street said that it was still necessary to retain reservists on active service.

Obituary

- Oct. 7.—Maud Allan, famous American dancer, aged 73.
 Oct. 9.—Una Mary, Baroness de Ros, holder of the Premier Barony of England, aged 77.
 Oct. 13.—Rt. Rev. John Charles Jones, Bishop of Bangor since 1949, aged 52.
 Oct. 17.—Lt.-Gen. Sir Gordon Macready, Bt., K.B.E., C.B., C.M.G., D.S.O., M.C., former Assistant C.I.G.S. and economic adviser to Control Commission for Germany, aged 65.
 Oct. 18.—Sir Robert Hodgson, K.C.M.G., K.B.E., diplomat, aged 82.

Mean Longitude of Ascending

Node on January 1, 237°.

PHENOMENA

January 3. Earth at Perihelion, i.e. at least distance (91,400,000 miles) from the Sun.

9^d 9h. Mars in conjunction with the Moon. Mars 3° S.

10. Mercury in inferior conjunction with the Sun.

20^d 20h. Jupiter in conjunction with the Moon. Jupiter 6° N.

21^d 16h. Mercury in conjunction with Venus. Mercury 2° 8 N.

25. Uranus in opposition.

26^d 0h. Saturn in conjunction with the Moon. Saturn 0° N.

29^d 16h. Venus in conjunction with the Moon. Venus 4° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h	d	h
Dec.	1	24	Dec.	16 23
Jan.	1	22	Jan.	16 21
Feb.	1	20	Feb.	15 19

Draco (below the Pole),
Ursa Minor (below the Pole),
Camelopardus, Perseus, Auriga, Taurus, Orion, Eridanus and Lepus.

MONTHLY NOTES

January 1. New Year's Day.

— Bank Holiday in Scotland.

— County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25 last.

6. *Old Christmas Day. Dividends on Consols, etc., due.

7. Christmas Fire Insurances must be paid.

* See note, page 94.

** Centenary.

Mean semi-diameter in arc 16'.3; in time 1m 10s.

* In the sense Apparent minus Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time

MORNING AND EVENING STARS

MERCURY is at inferior conjunction on the 10th but becomes visible as a morning star towards the end of the month. Although not very bright, it may possibly be glimpsed low in the south-east before sunrise. Venus passes nearly 3° south of Mercury on the 21st, at which time Mercury is almost stationary.

VENUS is a morning star, rising in the south-east nearly two hours before the sun at the beginning of the month. It is now moving away from the earth on the far side of its orbit. Magnitude -3.3.

MARS does not come to opposition in 1957, but remains a rather faint object, moving rapidly eastwards throughout the year. In January it is an evening star, setting about midnight, and moves from Pisces into Aries, its brightness decreasing from magnitude +0.3 to +0.8.

JUPITER rises in the east before midnight, and is at a stationary point on the 17th, when it will be seen in Virgo, between the stars beta and gamma of that constellation. Phenomena of Jupiter's four great satellites are given on page 150.

SATURN is a morning star (magnitude +0.7), moving direct on the borders of Ophiuchus and Scorpius, a few degrees north of the red star Antares (magnitude +1.2). On the 26th the Moon, then a waning crescent, passes less than half a degree south of Saturn; as seen from Australia the planet will be occulted. These close conjunctions of the Moon and Saturn occur each month throughout the year.

URANUS is in opposition on January 25, and may be found in Cancer, about 2° west of the Praesepe cluster. The planet is only just visible to the naked eye, but may be found in a small telescope as a greenish disk of diameter 4".

24	S.	Sexagesima. St. Matthias			
25	M.	John Foster Dulles b. 1888. Sir J. Tenniel d. 1914			
26	Tu.	Wren d. 1723. Sir Harry Lauder d. 1950			
27	W.	John Evelyn d. 1706. John Steinbeck b. 1902			
28	Th.	Sir Basil Embry b. 1902. Alfonso XIII d. 1941			

CONSTELLATIONS

The following constellations are near the meridian at

	d	h	d	h
Jan.	1	24	Jan.	16
Feb.	1	22	Feb.	15
Mar.	1	20	Mar.	16

Draco (below the Pole), Camelopardus, Auriga, Taurus, Gemini, Orion, Canis Minor, Monoceros, Lepus, Canis Major and Puppis (Argo).

PHASES OF THE MOON

d h m

First Quarter.....	7	23	23
Full Moon.....	14	16	38
Last Quarter.....	21	12	18

d h

Perigee (221,550 miles) ..	14	11
Apogee (252,630 ..) ..	27	15
Mean Longitude of Ascending Node on February 1, 235 .		

MONTHLY NOTES

- February 1. Pheasant and partridge shooting ends.
2. Scottish Term Day. 5. Elizabeth II ends.
6. Elizabeth II begins. 8. Half-Quarter Day.
20. * Old Half-Quarter Day.

* NOTE—Astronomically the "Old" Style equivalent should be 13 days (not 12 days) later than the "New" Style from 1901 onwards (owing to 1900 not being a Leap year) but the habits of a century are not easily changed. ** Centenary.

QUARTER DAYS

(England, Wales and Northern Ireland)

Lady Day.....	March 25	Michaelmas.....	September 29
Midsummer.....	June 24	Christmas.....	December 25

HALF-QUARTER DAYS are Feb. 8, May 9, Aug. 11 and Nov. 11.

SCOTTISH TERM DAYS

Candlemas.....	February 2	Lammas.....	August 1
Whitsunday.....	May 15	Martinmas.....	November 11

Removal Terms are May 28 and November 28.

Mean semi-diameter in arc 16'.2; in time 1^m 07^s.

* In the sense Apparent *minus* Mean. Throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest western elongation on the 2nd, and may be found during the first week of the month low in the south-east before sunrise.

VENUS is moving rapidly in towards the sun, but is still above the horizon for a short while before sunrise in the south-east.

MARS is an evening star in Aries, but is growing fainter as its distance increases. On February 6th the planet will be seen very close to the Moon, and an occultation will occur just before midnight. At this time the planet will be low in the west, and its reappearance from behind the moon is only likely to be visible in the north of England and in Scotland. For details, see page 146.

JUPITER is a brilliant evening star (magnitude -2.0) with a slow retrograde motion in Virgo. It rises in the early evening, and is conspicuous in a part of the sky where there are no very bright stars.

SATURN is a morning star, rising some hours before the Sun. On the morning of the 22nd, Saturn will be seen about 1½° east of the Moon, which will then be at last quarter. This conjunction will be seen as an occultation in S. America.

Titan, Saturn's largest satellite, may easily be seen with a small telescope, especially at the times of greatest elongation. In February, Titan is at greatest western elongation on the 2nd and 18th, and at greatest eastern elongation on the 10th and 26th.

Perigee (223,100 miles) ...	14 22
Apogee (252,140 ..) ...	27 04
Mean Longitude of Ascending Node on March 1, 234°.	

MONTHLY NOTES

- March 1. Auditors of Boroughs, Eng. and W., to be elected.
 6. Lent begins (ends midnight April 20).
 8. Last day for sending list of persons employed in factories.
 17. Bank Holiday in Northern Ireland.
 25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Quarter Sessions to be held 21 days before or after this date.
 31. Financial Year 1956-57 ends.

** Centenary.

Mean semi-diameter in arc 16'.1; in time 1m 05".

* In the sense Apparent *minus* Mean. Throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 20th and is too close to the Sun to be seen this month.

VENUS is approaching superior conjunction and is also invisible during March.

MARS moves from Aries into Taurus this month, and may be found about 3° south of the Pleiades in mid-March. It continues to grow fainter (magnitude +1.2 to +1.6) and is noticeably less bright than the nearby red star *Aldebaran*.

JUPITER comes to opposition on March 17th (magnitude -2.0) and is visible all night. The

planet can be half a magnitude brighter than this at an October opposition, when it is nearest the Sun; but in 1957 it is not far from aphelion, and is about 50 million miles farther away from the sun.

SATURN continues to form a conspicuous group with *Antares* and the bright stars of northern Scorpius. It is a morning star, rising after midnight in the south-east, and on the 24th it reaches a stationary point and then begins to retrograde. The brightness increases during the month (magnitude +0.6). Titan is at western elongation on the 6th and 22nd, and at eastern elongation on the 14th and 30th.

PHENOMENA

April 5d 4h. Mars in conjunction with the Moon. Mars 3° N.

13d 14h. Jupiter in conjunction with the Moon. Jupiter 6° N.

14. Venus in superior conjunction with the Sun.

15. Mercury at greatest eastern elongation (20°).

18d 3h. Saturn in conjunction with the Moon. Saturn 0° S.

21. Neptune in opposition.

29-30. Annular Eclipse of the Sun. See p. 146.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Mar. 1 24	Mar. 16 23	
April 1 22	April 15 21	
May 1 20	May 16 19	

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Major, Leo Minor, Leo, Sextans, Hydra and Crater.

PHASES OF THE MOON

● New Moon.....	29 23 54

	d h
Perigee (226,090 miles) ...	12 01
Apogee (251,500 ") ...	23 21

Mean Longitude of Ascending Node on April 1, 232°.

According to the Summer Time Act, 1925, Summer Time 1957 should begin at 2 A.M., G.M.T., on April 14 and should end on October 6 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

April 1. Ramadān begins.

—, Refreshment House Licences to be renewed.

5. Income Tax Year (1956-57) ends. 6. *Old Lady Day.

8. Lady Day Fire Insurances must be paid.

15. County Sheriffs (Eng. and W.) begin term of office.

16. First day of Jewish Passover. Israel Independence Day.

19. Good Friday. Banks and Stock Exchange closed.

20. Lent ends at midnight.

22. Bank and General Holiday, England, Wales and N. Ireland.

30. Ramadān ends.

* See note p. 94.

** Centenary.

Mean semi-diameter in arc 16'.0; in time 1m 05s.

* In the sense Apparent minus Mean. From April 1-15 apply as in March (see page 99) and for the remainder of the month as in May (see page 107).

MORNING AND EVENING STARS

MERCURY is at greatest elongation on the 15th and there is a favourable opportunity of seeing the planet as an evening star during the first half of the month. The planet is then at its brightest, and is well placed north of the equator and clear of the western horizon after sunset.

VENUS is at superior conjunction on the 14th, after which date it is theoretically an evening star, although still too close to the Sun to be visible.

MARS still moves direct through Taurus, but now sets before midnight. Its rapid motion is very obvious as it passes between the Hyades and Pleiades; it will be about 7° north of Aldebaran (which is fully half a magnitude brighter) on the 3rd.

JUPITER is a conspicuous evening star in the southern sky on the borders of Virgo and Leo. Magnitude -2.0 to -1.9.

SATURN now rises at midnight in the south-east and its brightness increases steadily as it approaches opposition (magnitude +0.6 to +0.4). Titan is at western elongation on the 7th and 23rd, and at eastern elongation on the 15th and 30th.

NEPTUNE is at opposition on the 21st, and may be found in Virgo, about three quarters of the distance from Spica to the 4th magnitude star kappa Virginis, 12° to the east. In a telescope, Neptune appears as a greenish disk of diameter 2" and magnitude 8.

Mean semi-diameter in arc 15'.8; in time 1^m 07^s.

* In the sense Apparent minus Mean. Throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is too close to the Sun to be seen during the month. At the time of inferior conjunction on the 6th, it passes in transit across the face of the Sun, but the event occurs at midnight and is not visible in this country. For details, see page 146.

VENUS now moves rapidly away from the Sun, and may be seen as an evening star, setting north of west more than an hour after sunset at the end of the month. Magnitude -3.4.

MARS passes into Gemini at the beginning of the month, and is now a rather inconspicuous object of the 2nd magnitude, setting in the west before midnight.

JUPITER now moves into Leo, and reaches a

stationary point on the 19th. Its brightness diminishes (magnitude -1.9 to -1.7) but it forms a striking group with *Denebola* and the other stars of the Lion.

SATURN is approaching opposition and growing brighter (magnitude +0.4 to +0.2). It is now more than 20° south of the equator, so that even in southern England it scarcely attains 18° of altitude above the southern horizon. Titan is at western elongation on the 9th and 24th and at eastern elongation on the 16th.

There is a total eclipse of the Moon at a convenient hour on the night of May 13. The Moon, which will be low in the south at the time, is eclipsed for more than an hour (for details see page 146).

PHENOMENA

June 1d 9h. Mars in conjunction with the Moon. Mars 6° N.

1. Saturn in opposition.

1. Mercury at greatest western elongation (24°).

6d 1h. Jupiter in conjunction with the Moon. Jupiter 6° N.

11d 14h. Saturn in conjunction with the Moon. Saturn 0° S.

21. Summer Solstice.

29d 11h. Venus in conjunction with the Moon. Venus 6° N.

30d 0h. Mars in conjunction with the Moon. Mars 6° N.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
May	1 24	May 16 23
June	1 22	June 15 21
July	1 20	July 16 19

Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra.

PHASES OF THE MOON

	d h m
) First Quarter.....	5 07 10
○ Full Moon.....	12 10 02
(Last Quarter.....	20 10 22
● New Moon.....	27 20 53

	d h
Perigee (229,070 miles)...	3 04
Apogee (251,390 ..)...	18 11
Perigee (226,130 ..)...	30 08

Mean Longitude of Ascending Node on June 1, 229°.

See note on Summer Time, page 102.

MONTHLY NOTES

- June 4. Eton celebration day (George III's birthday).
 5. Jewish Pentecost (Feast of Weeks) begins.
 —. Constitution Day, Denmark.
 10. Bank and General Holiday, England, Wales and N. Ireland.
 21. Longest day.
 24. Midsummer Day. Quarter Day. Sheriffs of London to be elected by the Liverymen.
 —. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.

** Centenary.

Mean semi-diameter in arc 15'.8; in time 1^m 09^s.

* In the sense Apparent minus Mean. From June 1-14 apply as in May (see page 107) and for the remainder of the month as in July (see page 115).

MORNING AND EVENING STARS

MERCURY is at greatest western elongation on the 1st, and rises about an hour before the Sun. The planet is not well seen in these latitudes in the summer, however, since it is easily lost in the glare of the dawn sky.

VENUS is an evening star and sets about one hour after the Sun. It reaches its most northerly point in mid-June (magnitude -3.3).

MARS moves into Cancer in the middle of June, and will be seen in the western evening sky as a 2nd magnitude star below *Castor* and *Pollux* at the beginning of the month. It passes less than a degree north of Uranus on the evening of the 29th, but some optical aid will be necessary to see the two planets against the bright twilight sky.

JUPITER is still a brilliant object in the evening sky, and moves back into Virgo at the beginning of the month (magnitude -1.7 to -1.5). The tilt of the planet's north pole away from the Sun is now more than 2°, and as a result of this, satellite IV (Callisto) is no longer eclipsed at each revolution.

SATURN is at opposition on June 1st and may be seen throughout the short summer night some degrees north of *Antares*. The rings are now open at an angle of 26° and will reach their maximum tilt in 1958. The magnitude of the planet is now +0.2, but this is not a particularly favourable opposition, since the planet is not only low in the sky but is also approaching aphelion, and is at a great distance from both Earth and Sun. Titan is at eastern elongation on the 1st and 17th, and at western elongation on the 9th and 25th.

Mean semi-diameter in arc 15'·8; in time 1^m 08^s.

* In the sense Apparent minus Mean. Throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 4th, but becomes visible as an evening star towards the end of the month. Mercury is very close to Mars on the evening of the 23rd but the planets will be difficult to observe in the twilight sky.

VENUS is still a brilliant evening star, but begins to set earlier. This is not a very favourable elongation, since the planet has a more southerly declination than the Sun for most of the year, and sets only 1 to 1½ hours after sunset. Venus passes about 1° north of Uranus on the evening of the 5th, and will be quite close to Mars on the 11th.

MARS is now close to the Sun and is only a 2nd magnitude star. The conjunction with Venus on the 11th will give an opportunity of recognizing

Mars, which will then be less than ½° south of Venus.

JUPITER now sets before midnight and decreases in brightness to magnitude -1·3. The angular distance which separates Venus and Jupiter decreases rapidly during the month; and Venus will pass Jupiter towards the end of August.

SATURN is a bright evening star, moving retrograde in Ophiuchus. On the 18th it will be about 6° north of Antares; this is the second conjunction of the planet with this star during the present opposition; the first occurred on December 21 last, and the third will be on September 6, 1957. On the evening of the 8th, Saturn (magnitude 0·4) will be seen near the 11-day old Moon, and from S. Africa the planet will be seen to be occulted. Titan is at eastern elongation on the 3rd and 19th, and at western elongation on the 11th and 27th.

Mean semi-diameter in arc 15'.8; in time 1m 05s.

* In the sense Apparent minus Mean. Throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest eastern elongation on the 13th and will be an evening star at the beginning of the month. It is not very bright, however, and is moving rapidly south, setting only a short time after sunset.

VENUS continues to be an evening star (magnitude -3.4). There is a conjunction with Jupiter on the 22nd, and on that evening the two planets will be seen in the western sky, Venus being the brighter and the more southerly.

MARS is approaching conjunction, and will not be visible in August.

JUPITER is still visible in the evening sky, setting about an hour after sunset. The planet crosses the equator on the 21st, and for the next six years will

be seen among the southern constellations. A close conjunction with Venus will be seen on the following day, and is referred to above.

SATURN reaches a stationary point on the 12th, on the borders of Ophiuchus and Scorpius. It may still be seen after the other planets have set, low in the south-west, but recognizable as the brightest star in that part of the sky. On the 4th, Saturn (magnitude +0.6) will be close to the Moon, which is then just past first quarter. Titan is at eastern elongation on the 4th and 20th and at western elongation on the 12th and 28th.

The meteor shower known as the Perseids is the most reliable one of the year, reaching its maximum on August 12th. In 1957, however, the Moon, just past full, will interfere with this spectacle.

PHENOMENA

September 14th. Saturn in conjunction with the Moon. Saturn 1° S.

9. Mercury in inferior conjunction with the Sun.

21. Mars in conjunction with the Sun.

23. Autumnal Equinox.

25. Mercury at greatest western elongation (18°).

26th 18th. Venus in conjunction with the Moon. Venus 2° S.

28th 14th. Saturn in conjunction with the Moon. Saturn 1° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Aug. 1	24	Aug. 16 23
Sept. 1	22	Sept. 15 21
Oct. 1	20	Oct. 16 19

Draco, Cepheus, Lyra, Cygnus, Vulpecula, Sagitta, Delphinus, Equuleus, Aquila, Aquarius and Capricornus.

PHASES OF THE MOON

	d h m
First Quarter.....	1 04 34
Full Moon.....	9 04 55
Last Quarter.....	17 04 02
New Moon.....	23 19 18
First Quarter.....	30 17 49

	d h
Apogee (252,520 miles)...	8 17
Perigee (222,290 ")...	23 05
Mean Longitude of Ascending Node on September 1, 224°.	

See note on *Summer time*, page 126.

MONTHLY NOTES

September 1. Partridge shooting begins. Salmon close-time begins. Lists of Jurors to be affixed to church doors for the first three Sundays.

8. Malta's National Day (1565).

9. Harvest Moon.

26. Jewish New Year (A.M. 5718).

28. Sheriffs of London to be sworn in.

29. Michaelmas. Quarter day. Lord Mayor of London elected. —. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.

** Centenary.

Mean semi-diameter in arc 15'.9; in time 1m 04s.

* In the sense Apparent minus Mean. Except on September 1 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at inferior conjunction on the 9th and at greatest elongation west on the 25th. Thus it will not be visible until the end of the month, when it appears as a morning star in the east before sunrise. Mercury is brightest after western elongation, and the most favourable period for seeing the planet will be the last week of September, and the first week of October.

VENUS is now well south of the Sun and at the end of the month sets in the south-west only about an hour after sunset.

MARS is in conjunction on the 21st, and will not be seen during September.

JUPITER is approaching conjunction and is too close to the Sun to be visible this month.

SATURN is now moving direct in Ophiuchus, and again passes north of *Antares* on the 6th. There is an interesting and somewhat unusual occultation of Saturn on the 28th, which is visible in this country. The 5-day old Moon will be low in the east, and the occultation occurs (see page 146) just after midday; it is not possible to see this event without a telescope. Magnitude of Saturn +0.8. Titan may be seen at eastern elongation on the 5th and 21st, and at western elongation on the 13th and 29th.

PHENOMENA

October 5. Jupiter in conjunction with the Sun.

20^d 12h. Venus in conjunction with Saturn. Venus 4^h 1 S.

23. Total Eclipse of the Sun. See p. 146.

24. Mercury in superior conjunction with the Sun.

26. Neptune in conjunction with the Sun.

26^d 4h. Saturn in conjunction with the Moon. Saturn 1^o S.

26^d 15h. Venus in conjunction with the Moon. Venus 6^o S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Sept. 1 24	Sept. 15 23	
Oct. 1 22	Oct. 16 21	
Nov. 1 20	Nov. 15 19	

Ursa Major (below the Pole), Cepheus, Cassiopeia, Cygnus, Lacerta, Andromeda, Pegasus, Capricornus, Aquarius and Piscis Austrinus.

Mean Longitude of Ascending Node on October 1, 222°.

According to the Summer Time Act, 1925, Summer Time 1957 should begin at 2 A.M., G.M.T., on April 14 and should end on October 6 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

October 2. Pheasant shooting begins.

5. Yom Kippur (Jewish Day of Atonement).

8. Hunter's Moon.

11. *Old Michaelmas Day.

12. Columbus Day, U.S.A.

14. Michaelmas Fire Insurances must be paid.

29. Turkish National Holiday.

* See note, p. 94.

** Centenary.

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent minus Mean. Throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is favourably placed for observation as a morning star during the first week of the month. It is then quite bright and well north of the Sun, and should be looked for in the east before sunrise. Mercury is at superior conjunction on the 24th.

VENUS is growing brighter as its distance from the earth decreases, and by the end of the month the magnitude is -3.9. The planet is well south of the equator, and in mid-October passes between Antares and Saturn.

MARS now begins to be seen as a morning star of the 2nd magnitude in Virgo. At the end of the

month it rises more than an hour before the Sun and on the morning of the 28th will be found about 3° north of Spica (magnitude +1.2). Mars is still moving rapidly eastwards, and is now south of the equator.

JUPITER is in conjunction on the 5th, but may be visible as a morning star at the end of the month. Whereas Mars rises at about the same time each morning, Jupiter comes into view about 3 minutes earlier each day, and by the end of October will rise a hours before the Sun. (Magnitude -1.2.)

SATURN now sets in mid-evening in the southwest (magnitude +0.8). The more brilliant planet Venus passes 4° south of Saturn on the 20th.

Mean semi-diameter in arc 16'.2; in time 1^m 09^s.

* In the sense Apparent minus Mean. Throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is an evening star throughout the month, but sets shortly after the Sun, and is unlikely to be seen from this country until the end of November. It is then fairly bright, but low in the south-west after sunset.

VENUS comes to greatest eastern elongation on the 18th, and at this time appears in a small telescope like the Moon at last quarter. The planet now reaches its farthest point south of the equator, and begins to come north again. At the end of the

month it sets about 3 hours after the Sun, and has a magnitude of -4.2.

MARS is a morning star in Virgo, but at the end of the month moves into Libra. It still rises at about 5.30 a.m., and is seen to the east of the more brilliant Jupiter.

JUPITER rises some hours before the Sun and brightens during the month to magnitude -1.3. On the 1st it passes rather more than 3° north of Spica. Details of some of the phenomena of Jupiter's satellites are given on page 150.

SATURN is now approaching conjunction, and sets shortly after the Sun.

PHENOMENA

December 8. Mercury at greatest eastern elongation (21°).

9. Saturn in conjunction with the Sun.

16d 18h. Jupiter in conjunction with the Moon. Jupiter 2° N.

18d 21h. Mars in conjunction with the Moon. Mars 1° S.

22. Winter Solstice.

24. Venus at greatest brilliancy.

24d 18h. Venus in conjunction with the Moon. Venus 6° S.

25. Mercury in inferior conjunction with the Sun.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h		d	h
Nov.	1	24	Nov.	15	23
Dec.	1	22	Dec.	16	21
Jan.	1	20	Jan.	16	19

Ursa Major (below the Pole), Ursa Minor (below the Pole), Cassiopeia, Andromeda, Perseus, Triangulum, Aries, Taurus, Cetus and Eridanus.

PHASES OF THE MOON

	d	h	m
○ Full Moon.....	7	06	16
☾ Last Quarter.....	14	05	45

Mean semi-diameter in arc 16'.3; in time 1^m 11^s.

* In the sense Apparent minus Mean. From December 1-25 apply as in November (see page 131) and for the remainder of the month as in January (see page 91).

MORNING AND EVENING STARS

MERCURY is at greatest eastern elongation on the 8th, and should be looked for in the first week of the month as an evening star in the south-west after sunset. The planet is at inferior conjunction on the 25th.

VENUS reaches its greatest brilliancy on the 24th (magnitude -4.4), when it appears in a telescope as a crescent. The planet is now moving rapidly north again, and may be seen at the end of the year in the south-west for nearly 3 hours after sunset. Venus will be a brilliant morning star throughout most of 1958.

MARS is a morning star in Libra, moving at the

end of the month into Scorpius. It is still only of the 4th magnitude, but will grow steadily brighter as it approaches the opposition of November, 1958.

JUPITER is still moving direct in Virgo, and rises in the eastern sky in the early hours of the morning. It brightens during the month to magnitude -1.5, and will be in opposition again in April, 1958.

SATURN is in conjunction on the 9th and will not be visible during the month. It reappears in the beginning of 1958 as a morning star on the borders of Ophiuchus and Sagittarius, and comes to opposition in June, when the rings will be opened to their widest extent.

Introduction to Astronomical Section

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Nautical Almanac* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which, although given by the Summer Time Act, 1925, may be altered by Order in Council and are seldom known at the time of going to press.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 11th edition, 1950; 17s. 6d.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time if in force.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning

of the month at 22h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 22h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0h) are used for converting mean time to sidereal time and vice versa, as illustrated on pages 141-142.

The time SUN SOUTHS is the G.M.T. of transit of the Sun at Greenwich, or the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34', and the Sun's semi-diameter to be 16', the time

given is that when the true zenith distance of the Sun's centre is $90^\circ + 34' + 16''$ or $90^\circ 50'$, or, in other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

- (1) *Sunset*, defined as above.
- (2) *Civil twilight*, when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight must cease. In England it varies from about 30 to 50 minutes after sunset.
- (3) *Nautical twilight*, when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

These four steps are now tabulated each year in the *Nautical Almanac*. Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always

less by the amount of the horizontal parallax, i.e. nearly $1''$.

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as $8''$, because of libration. A positive sign indicates westerly longitude, or to the right hand, and applies between New Moon and First Quarter—or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from -90° to $+90^\circ$. Interpolation between two such values may be performed by taking the complement of either of them to 180° , and changing the sign. Thus the value -83° may be treated as $+97^\circ$, or the value $+85^\circ$ as -95° .

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-axis minor is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

A knowledge of the light to be expected from the Moon is of value, especially in war time, as prominent objects and water areas can be easily seen in strong moonlight. Thus the age of the Moon, and its times of local rising and setting (which may vary even more than in the case of the Sun) need to be known. In summer the Full Moon never attains a great height, whereas in winter "the Moon rides high".

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57''$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56° . They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks. To obtain the G.M.T. of the phenomenon

as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be *added* if west (as it usually is in Great Britain) or *subtracted* if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4^m$ and $15' = 1^m$.

The column MOON SOUTHS gives the G.M.T. of transit of the Moon over the meridian of Greenwich. It is independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda^\circ/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $151^\circ 05'$ east, so $\lambda = 13^h 55^m$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1957 Jan. 8 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich..... Jan.	7	16	42
λ		13	55
$0.58 \times (17^h 25^m - 16^h 42^m)$			25
G.M.T. of transit at Sydney.....	8	7	02
Corr. to N.S.W. Standard Time....		10	00
Local standard time of transit.....	8	17	02

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

A departure has been made from the former practice of giving the times of rising and setting of the planets, as they cannot be seen when on the horizon. As a new standard of reference by which the visibility may be gauged, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because

changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. when the planet souths at Greenwich is also given; it follows columns relating to times when the planet is in the east and precedes those relating to times when the planet is in the west. By this arrangement the times given for any date are consecutive, but it has sometimes been necessary to extend the hours beyond 24; thus Jan. 22^d 26^h is the same as January 22^d 02^h. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $3''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and now they will slowly widen until they reach their next maximum opening in 1958.

TIME

Greenwich Mean Time

Time is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere with respect to the Sun; it is 4^m longer than a rotation with respect to the stars, because of the revolution of the Earth round the Sun. The length of the solar day varies for two reasons, namely the ellipticity of the Earth's orbit and the fact that the plane of the equator does not coincide with the plane of the ecliptic. Mean time clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. The length of the mean solar day is constant, although that of the apparent day, or the interval from one transit of the Sun across the meridian to the next, varies for the reasons given above.

The mean solar day may be regarded as the period of rotation about the earth of a fictitious body called the Mean Sun, whose motion is uniform; and the zero of measurement is the instant when the Mean Sun is on the meridian. At this

instant it is mean noon for all places on that meridian, and Mean Time, measured in this way for some standard meridian, is usually chosen as the standard time for a whole country. It is the use of the meridian of Greenwich which gives rise to the expression Greenwich Mean Time (G.M.T.), which is taken as a standard. For astronomical purposes, G.M.T. is used, the day beginning at midnight, and a 24-hour system being adopted. Thus Greenwich p.m. times, in civil reckoning, must be increased by 12 hours to give G.M.T.

Apparent Solar Time

The time shown by a sundial is called apparent solar time. It differs from mean solar time by the equation of time, which is the total effect of the two causes mentioned that make the length of a solar day non-uniform. The equation of time reaches its maximum values in February (-14^m) and early November ($+16^m$); it has a zero value on four dates during the year, and it is only on these dates (approximately April 25, June 14, September 1 and December 25) that a sundial shows mean time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. As that point has a slow retrograde motion ($50''$ a year), known as precession, the length of the sidereal day, or $23^h 56^m 04^s.091$ of mean time, is $0^s.008$ less than the true period of rotation. The zero for sidereal time is when the First Point of Aries is on the meridian. In observatory practice sidereal time is found by comparing the observed time of transit of a star, as recorded by a sidereal clock, with the known true time of transit, namely the star's apparent right ascension. Any discrepancy, when adjusted for certain instrumental corrections, is the error of the sidereal clock. From this corrected sidereal time, the error of a mean time clock is found by comparison and computation as described below.

To convert standard mean time to local sidereal time, if many conversions are to be done for any one place, we may form once and for all the constant P , defined as

$$P = \text{longitude of standard meridian} + \text{acceleration corresponding to this longitude} - \text{local longitude}$$

where the acceleration of sidereal on mean time is taken from the table on page 145. West longitudes are considered to be positive, but, to avoid any subtractions, negative values of P may be replaced by their complement to 24^h . Then

$$\text{L.S.T.} = \text{sidereal time at } 0^h \text{ G.M.T. (page II of each month)} + P + \text{standard mean time} + \text{acceleration corresponding to this time.}$$

Example.—Required the L.S.T. at Melbourne (Long. $= -9^h 39^m 54^s$) at 1957 February 26^d 12^h 34^m 56^s Standard Time (10^h fast on G.M.T.).

E*

Long. of standard meridian.....	$-10^h 00^m 00^s$
Acceleration (same sign).....	$-1^m 39^s$
Sum	$-10^h 01^m 39^s$
Local long. with reversed sign....	$+9^h 39^m 54^s$
<hr/>	
P	$-21^m 45^s$
Complement to 24^h	$23^h 38^m 15^s$

For the given mean time

Sidereal time (page 95).....	$10^h 22^m 18^s$
P , as found above.....	$23^h 38^m 15^s$
Standard mean time.....	$12^h 34^m 56^s$
Acceleration from page 145....	$1^m 58^s$
(always positive).....	6^s
<hr/>	
Sum = L.S.T.....	$22^h 37^m 33^s$

One line may be saved by making a special table in which P is combined permanently with the acceleration for integral hours. Such a table for Melbourne would have the entry $23^h 40^m 13^s$ ($= 23^h 38^m 15^s + 1^m 58^s$) for the argument 12^h .

To convert local sidereal time to standard mean time we may first form the constant Q from

$$Q = \text{local longitude} - \text{retardation corresponding to this longitude} - \text{longitude of standard meridian.}$$

For Melbourne

Local longitude.....	$-9^h 39^m 54^s$
Retardation from page 145....	$+1^m 58^s$
(opposite sign).....	$+1^m$
Long. of standard meridian, with reversed sign.....	$+10^h 00^m 00^s$
<hr/>	
Sum = Q	$+1^m 1^s$

We then have

$$\text{Standard mean time} = \text{preceding transit of First Point of Aries (page II of each month)} + Q + \text{L.S.T.} - \text{retardation corresponding to L.S.T.}$$

To reverse the above example, we first note that the L.S.T. is greater than the complement to 24^h of the transit of Aries, so that the transit required is that on Feb. 25.

Transit of Aries (page 95).....	$25^h 13^m 30^s.04$
Q , as found above.....	$01^m 01^s$
L.S.T.....	$22^h 37^m 33^s$
<hr/>	
Sum	$26^h 12^m 38^s.08$
Retardation from page 145....	$-2^m 36^s$
(always negative).....	-6^s
Sum = standard mean time....	$26^h 10^m 34^s.08$

An alternative method is:

$$\text{Standard mean time} = (\text{L.S.T.} - \text{sidereal time at } 0^h \text{ G.M.T., as tabulated}) - \text{retardation corresponding to this difference} + Q.$$

In the example	h	m	s
L.S.T.....	22	37	33
Sidereal time at 0h.....	10	22	18
Difference.....	12	15	15
Retardation from page 145.....	—	1	58
(always negative).....	—	—	2
Sum.....	12	13	15
Q, here positive.....	—	21	41
Sum = standard mean time.....	12	34	56

Owing to the omission of decimals of a second from the times given on the monthly pages, the answers obtained by these two methods may differ by one second.

Rhythmic Time Signals

For the purpose of comparing the time shown by a distant clock with that of the Greenwich standard, signals of the rhythmic or Vernier clock type are broadcast from the Post Office Wireless Station at Rugby each day at 10h and 18h. The zero signal coincides exactly with a beat of the standard clock, and those that follow are at intervals of 60/61 seconds. The comparison is made by noting the coincidence of a beat of the distant clock beating seconds, with a signal. If a tick of the clock coincides with the zero signal, it is clear that the clocks differ by an integral number of seconds. If, however, coincidence does not come at the zero signal, but at the n th signal, the difference of the clocks in seconds is that integral number with $n/61$ added.

Variable Rotation of the Earth

The accuracy of clocks and of time signals is essentially dependent on the uniform rotation of the earth, but it has been known for many years that the speed of the earth's rotation is diminishing. This was first disclosed by a comparison of records of ancient eclipses with the times of these events as computed from modern theory. This slow change (amounting to about one-thousandth of a second in a century) is believed to be due to tidal friction in narrow seas.

The greater accuracy of modern crystal clocks has shown that there are seasonal variations in the earth's rate of rotation, together with small but irregular fluctuations, some of which may occur quite suddenly. The seasonal variation, which causes the earth to be slow in spring and fast in autumn, may be due to the seasonal movements of masses of air and water over the earth's surface. The variation is very small, and may cause an error in time-keeping of 60 milliseconds in the course of the year.

SUMMER TIME IN THE UNITED KINGDOM

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time*

Act, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War, the duration of Summer Time was extended, and in some years Double Summer Time was in force. The dates of the actual duration since its inception are:

1916 May 21—Oct. 1	1937 Apr. 18—Oct. 3
1917 Apr. 8—Sept. 17	1938 Apr. 10—Oct. 2
1918 Mar. 24—Sept. 30	1939 Apr. 16—Nov. 19
1919 Mar. 30—Sept. 29	1940 Feb. 25—Dec. 31
1920 Mar. 28—Oct. 25	1941 Jan. 1—Dec. 31
1921 Apr. 3—Oct. 3	1942 Jan. 1—Dec. 31
1922 Mar. 26—Oct. 8	1943 Jan. 1—Dec. 31
1923 Apr. 22—Sept. 16	1944 Jan. 1—Dec. 31
1924 Apr. 13—Sept. 21	1945 Jan. 1—Oct. 7
1925 Apr. 19—Oct. 4	1946 Apr. 14—Oct. 6
1926 Apr. 18—Oct. 3	1947 Mar. 16—Nov. 2
1927 Apr. 10—Oct. 2	1948 Mar. 14—Oct. 31
1928 Apr. 22—Oct. 7	1949 Apr. 3—Oct. 30
1929 Apr. 21—Oct. 6	1950 Apr. 16—Oct. 22
1930 Apr. 13—Oct. 5	1951 Apr. 15—Oct. 21
1931 Apr. 19—Oct. 4	1952 Apr. 20—Oct. 26
1932 Apr. 17—Oct. 3	1953 Apr. 19—Oct. 4
1933 Apr. 9—Oct. 8	1954 Apr. 11—Oct. 3
1934 Apr. 22—Oct. 7	1955 Apr. 17—Oct. 2
1935 Apr. 14—Oct. 6	1956 Apr. 22—Oct. 7
1936 Apr. 19—Oct. 4	

DOUBLE SUMMER TIME

1941 May 4—Aug. 10	1944 Apr. 2—Sept. 17
1942 Apr. 5—Aug. 9	1945 Apr. 2—July 15
1943 Apr. 4—Aug. 15	1947 Apr. 13—Aug. 10

SUMMER TIME ABROAD

Variations of the Standard time are used and the dates of adoption are decided annually. In some countries the variations occur in winter and are called Winter Time†.

British Commonwealth:—	Foreign Countries:—	Israel
Bermuda	Albania	Madagascar
Canada (except Yukon)	Azores	Madeira
Channel Islands	China	French
Gold Coast†	Dominican Republic†	Morocco
Hong Kong	Formosa	Nicaragua
Trinidad Is.	Friendly Is.	Pescadores Is.
	Hungary	Poland
	Iceland	Philippines
	Irish Republic	Portugal
		Tripolitania
		U.S.A.

Some of the astronomical information in this ALMANACK has been taken from the *Nautical Almanac*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

Standard Time

IN the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. In some countries (†) Standard Time is no longer used and the time given in the table below is that in normal use.

The large territories of the United States, Canada

zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast on Greenwich Time.

- 12 hrs. F... Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
- 11½ " F... Norfolk I., Nauru I.
- 11 " F... New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
- 10 " F... Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Marianas Is.
- 9½ " F... South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.
- 9 " F... Manchuria, Japan, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuril Is.
- 8½ " F... Mollucca Is., Korea.
- 8 " F... Port Arthur, East China, Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, Indo-China, N. Borneo, Formosa, Pescadores Is.
- 7½ " F... Malay Peninsula, Singapore, Indonesian Borneo and Java.
- 7 " F... China (on the Yangtze Kiang from Chungking to Shasze), Hainan I., Pakhoi, S. Sumatra, Christmas I. (Indian Ocean), Thailand (Siam).
- 6½ " F... Burma, Andaman and Nicobar Is., Cocos-Keeling Is., N. Sumatra.
- 6 " F... Pakistan (East).
- 5½ " F... India, Portuguese India, Ceylon, Laccadive Is.
- 5 " F... Chagos Archipelago, Pakistan (West).

In the Tonga Islands the time 12h. a.m. fast and in Chatham Is.† 12h. 15m. fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15° S.	172½° W.	53° N.	170° E.
51° S.	180°	5° S.	178°	65½° N.	169° W.
45° S.	172½° W.	48° N.	180°	75° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of "Sun Souths" given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12h fast on G.M.T.) of sunset on May 24

at Auckland. The latitude is 36° 50' south (or minus) and the longitude 174° 39' east. Taking the declination as +20°·7, we find

4 00	-48	8 00	+ 2	12 00	+49	16 00	+48	20 00	- 1	24 00	-49

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1' throughout the year for all latitudes up to 60°.

Example.—On July 4 at 23^h 17^m G.M.T. in longitude 2^h 34^m west, the altitude of *Polaris*

(corrected for dip, etc.) is found to be 41° 56'.

The local sidereal time is found by the method given on page 241 to be 15^h 34^m. Hence

Observed altitude	41° 56'
Correction from table ..	+5'
Latitude	42° 47'

MEAN AND SIDEREAL TIME

MEAN REFRACTION

Acceleration				Retardation				Alt. Ref.	
h	m	s		h	m	s		Alt.	Ref.
1	0	10	13	2	0	10	13	1	20
2	0	20	14	2	0	20	14	2	30
3	0	30	15	2	0	30	15	3	40
4	0	39	16	2	0	39	16	4	50
5	0	49	17	2	0	49	17	5	60
6	0	59	18	2	0	59	18	6	70
7	1	09	19	2	1	09	19	7	80
8	1	19	20	2	1	19	20	8	90
9	1	29	21	2	1	29	21	9	100
10	1	39	22	2	1	39	22	10	110
11	1	48	23	2	1	48	23	11	120
12	1	58	24	2	1	58	24	12	130

The length of a sidereal day in mean time is 23^h 56^m 04^s. Hence 1^h M.T. = 1^h + 9^s 86^s S.T. and 1^h S.T. = 1^h - 9^s 83^s M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the

required acceleration or retardation. Thus the acceleration for 12^h 26^m (which lies between the entries 9^m 07^s and 15^m 13^s) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for 45^m 46^s is 7^s.

Example.—Convert 14^h 27^m 35^s from S.T. to M.T.

Given S.T.	14 27 35
Retardation for 14 ^h	2 18
Retardation for 27 ^m 35 ^s ..	5

Corresponding M.T. 14 25 12

For further explanation, see pages 241-242. The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1957

ECLIPSES

In the year 1957 there will be four eclipses, two of the Sun and two of the Moon.

1. An annular eclipse of the Sun on April 29-30, visible only in Arctic regions. A partial eclipse will be seen in eastern Asia, the north Pacific Ocean and parts of Canada.

2. A total eclipse of the Moon on May 13-14, visible generally in western Asia, the Indian Ocean, Africa, Europe, the Atlantic Ocean and the eastern parts of America. In Great Britain the eclipse will commence an hour after sunset, the Moon entering the shadow (umbra) at 20^h 45^m on the 13th. The total phase lasts from 21^h 52^m until 23^h 10^m and the eclipse ends at 17 minutes after midnight.

3. A total eclipse of the Sun on October 23, visible only from a small area near the South Pole. A partial eclipse will be seen at sunrise in South Africa and Madagascar.

4. A total eclipse of the Moon on November 7, visible from North America, the Pacific Ocean, Arctic regions, Australasia and parts of Asia. Mid eclipse occurs at 14^h 27^m G.M.T., and the total phase lasts for 30 minutes.

TRANSIT OF MERCURY

The circumstances under which Mercury can be seen to transit across the face of the Sun are similar to those of a solar eclipse. Owing to the inclination of the planet's orbit to the ecliptic, the phenomenon can occur only when the planet is near one of the nodes of the orbit. The earth is at the longitude of the nodes of the orbit of Mercury in early May and November and transit of Mercury occurs only at these times. November transits may occur at intervals of 7, 13, or 46 years, but May transits are less frequent, since the 7-year period is not possible. The transit of 1957 May 5 is visible in North America, Asia and Australasia, and commences at 23^h 59^m. Mercury will pass across the Sun's upper limb, the transit ending at 2^h 30^m on May 6. The last May transit was in 1937 and the next will be in 1970. November transits occurred in 1940 and 1953, and will occur in 1960 and 1973.

During a transit Mercury appears as a small black spot (visible only in the telescope) and it moves across the Sun's disc from east to west—the opposite direction from the movement of the Moon in an eclipse of the Sun.

OCCULTATIONS OF STARS

The planets Saturn and Mars are both occulted during the year, and the disappearance of Mars on February 6, when the Moon is at first quarter, should be well seen in this country just before midnight. Saturn will be occulted on September 28, but as seen from Greenwich this event occurs $\frac{1}{2}$ hour after noon, and will require a telescope. The planet Mercury will be occulted on August 27, but this will only be visible from eastern Asia.

A new series of occultations of the bright star *Spica* begins in 1957 in the southern hemisphere. At the end of the year, owing to the changing

orientation of the Moon's orbit, these phenomena become visible in Europe and North America, but none is predicted for this country. The brightest star for which occultations are predicted for Greenwich and Edinburgh is β Capricorni on the evening of October 2.

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6.5 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29', Long. 0°) and Edinburgh (Lat. 55° 56', Long. 3° 11' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a\Delta\lambda + b\Delta\phi$ to the given G.M.T.

As an illustration the reappearance of β Capricorni on October 2 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude.....	0°0	+3°2
Long. of Liverpool.....	+3°0	+3°0
$\Delta\lambda$	+3°0	-0°2
Latitude.....	51°5	55°9
Lat. of Liverpool.....	53°4	53°4
$\Delta\phi$	+1°9	-2°5
	<i>h m</i>	<i>h m</i>
G.M.T.....	22 31.6	22 18.7
$a\Delta\lambda$	-3°9	+0°3
$b\Delta\phi$	-3°2	+5°5
G.M.T. at Liverpool.....	22 24.5	22 24.5

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No occn. = star not occulted.

Low = star's altitude less than 10°.

Sun = Sun not sufficiently below the horizon.

Graz = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the Star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3" a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. $51^{\circ} 30'$) the meridian altitude of *Sirius* is found thus:

Altitude of equator.....	$36^{\circ} 30'$
Declination south.....	$16^{\circ} 39'$
Difference.....	$27^{\circ} 51'$

The altitude of *Capella* (Dec. $+45^{\circ} 57'$) at lower transit is:

Altitude of pole.....	$51^{\circ} 30'$
Polar distance of Star...	$44^{\circ} 03'$
Difference.....	$7^{\circ} 27'$

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 136). The stars *Sirius* and *Canopus* and the planets *Venus* and *Jupiter* are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

*α Herculis, mag. 3.1 to 3.9.

δ Cephei, mag. 3.7 to 4.4. Spectrum F₅ to G₀.

Jupiter's satellites transit across the disc from east to west, and pass behind the disc from west to east. The shadows that they cast also transit across the disc. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of

Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

Although the angle at which the orbits are seen is less than 3° in 1957, this is enough to restrict the number of phenomena of satellite IV, and after the beginning of May there are no eclipses or shadow transits of this satellite.

The list of phenomena given includes most of the eclipses and some of the shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse

Sh. = Shadow transit

c. = commences

f. = finishes

RADIO NOISE FROM JUPITER

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955 on wavelengths of 13.5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Similar evidence has been obtained from other quarters, and an investigation is now being made to discover possible correlations between these radio outbursts and the times at which visible markings on the belts of Jupiter transit across the centre of the disk.

The Stellar System

The celestial bodies, consisting of the Sun, Moon, planets and fixed stars, have the appearance of being attached to the inner surface of a sphere. The apparent daily rotation of this sphere, which carries the celestial bodies round us from east to west across the sky, is due to the rotation of the Earth with ourselves upon it from west to east. The fixed stars that constitute the great majority of the celestial bodies remain, as far as the naked eye can judge, absolutely fixed in their positions relative to one another. The Sun, Moon and planets, on the other hand, can easily be watched as the weeks go by, moving against the background of the fixed stars. This difference is simply a distance effect, for the Sun, Moon and planets, together with our own Earth, are all members of the same system, the so-called solar system, the dimensions of which are minute in comparison with the distances of the fixed stars. In fact, the nearest star is more than 6000 times as far away as the most distant planet, Pluto, and about 250,000 times as far away as the Sun.

Most of the stars are travelling through space at several miles a second; yet they are so remote that to the naked eye their present configurations are practically the same as they were 5000 years ago. The Sun is an ordinary star with a real brightness somewhat below the average; yet it shines 10,000 million times more brightly than *Sirius*, the brightest star, a million million times more brightly than the faintest naked-eye stars, and a million million million times more brightly than the faintest stars within reach of our large telescopes. Similarly, though the planets Venus, Mars, and Jupiter are the brightest objects in the night sky, they are really such small bodies that from even the nearest star they would be quite invisible in our largest telescopes. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes 1½ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; about 5½ hours from the planet Pluto; four years from the nearest star; and about 500 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many "light years" distant.

The total number of stars in the sky visible to the naked eye is about 4500, not all of which can be seen at any one time, or from any one latitude. About 2000 million stars can be photographed with the largest telescopes and it is estimated that the total number of stars in our stellar system is about 50,000 million.

THE STRUCTURE OF THE UNIVERSE

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. The faintest naked-eye stars are about the sixth magnitude, which is exactly 100 times fainter than the first. With the largest telescopes we can photo-

graph stars of about the 21st magnitude, which is 100 million times fainter than the first. All stars of the ninth magnitude or brighter have been catalogued and their magnitudes accurately measured. For fainter stars the number brighter than any given magnitude has been determined from measurements and counts in sample areas. If the universe consisted of stars distributed uniformly through an endless space, the number of stars brighter than any particular magnitude should be four times as great as the number brighter than the next lower (brighter) magnitude. It is actually found, however, that this ratio diminishes continuously as the stars become fainter, and falls to about 2 in the neighbourhood of the 16th magnitude. This must mean either that the universe of stars is of limited extent and that there are few or no stars beyond a certain distance, or that there is some sort of obscuring mist scattered through space which prevents our seeing the more distant stars.

Although the brighter stars are scattered more or less at random, the fainter naked-eye stars obviously tend to congregate in the vicinity of the Milky Way. The rate at which the stars appear to thin out is most rapid in directions at right angles to the Milky Way. This must mean that the stellar system extends to much greater distances in the direction of the Milky Way than at right angles to it. It is now known that the stellar system is shaped rather like a watch, its diameter being much greater than its thickness, while its central parts are thicker than its outer parts. The diameter is about 200,000 light years, and the thickness about 5000 light years in the outer parts, increasing to about 15,000 towards the centre. Though we in the solar system are situated well within the stellar system, we are placed somewhat eccentrically, being about 35,000 light years from its centre and 15,000 from its edge. The explanation of the appearance of the Milky Way is now clear: when looking in its direction, we are looking through a very deep stratum of stars, whereas in other directions the stratum is comparatively shallow. When we examine the Milky Way with the telescope, or photographically, we find its pale light broken up into countless stars, which in places appear so closely packed as to form an almost continuous background of light.

The flattened stellar system, also known as the galaxy or galactic system, contains the vast majority of observable stars. Besides individual stars it contains aggregations: the great star clouds, into which even with the naked eye the Milky Way is seen to be broken up; and the so-called open clusters, many of which can be seen with a good field-glass. Another class of object found in the galaxy is the diffuse nebula; these are irregularly-shaped, and sometimes very extensive, patches of hazy light composed of glowing gas. In close association with these are the dark diffuse nebulae, which appear like dark lanes or holes in the Milky Way, but in reality are vast clouds of very fine dust, blotting out the stars that lie beyond them. Though the bright nebulae, of which that in Orion is the

most beautiful, require to be seen with a telescope. The more extensive of the dark nebulae are readily seen with the naked eye as rifts or discontinuities in the Milky Way. The objects already described tend to congregate towards the Milky Way, but there is another class of object, which appears to avoid the immediate neighbourhood of the Milky Way. These are the globular clusters scattered in a more or less spherical distribution. The complete stellar system is thus conveniently likened to a currant bun, which after being split in two and buttered, has been put together again. The buttered layer represents the galaxy proper, containing the majority of the stars, the open clusters and the diffuse nebulae; while the currants scattered indiscriminately throughout the bun represent the globular clusters and the minority of individual stars. There is a general obscuring haze, much more widespread and rarefied than that composing the dark nebulae, and closely confined to the galactic plane. This has the effect of hiding very distant objects lying in, or close to, the direction of the Milky Way, while leaving practically undimmed equally distant objects lying well away from the Milky Way. This is why the globular clusters appear to avoid the vicinity of the Milky Way, for those that should appear closest are blotted out by the absorbing medium.

The brighter stars form a cluster to which our own Sun belongs. This local cluster is somewhat flattened in shape, with a diameter of about 2000 light years and a thickness of about 700. It is possible that it is essentially similar to the star clouds and clusters seen in the Milky Way.

We come finally to the extra-galactic nebulae—far outside the galaxy. Like the globular clusters, and for the same reason, they appear to avoid the galactic plane. Like the diffuse nebulae they have a hazy appearance in the telescope, but unlike them many are seen on photographs to have a curious spiral structure. Analysis of their light reveals the spectrum of starlight and not that of a glowing gas as in the case of the diffuse nebulae. The theory that they are stellar systems too remote for individual stars to be distinguished is borne out by the detection, in a few of the nearest, of the brightest of their component stars. Not all have a spiral form; some have an elliptical outline and others are quite irregular in shape. Recent observations substantiate the vague suggestion made about 150 years ago by William Herschel that they are "island universes"—systems essentially similar to, and independent of, our own stellar system. The two nearest are the Magellanic clouds, easily visible to the naked eye in the southern hemisphere, at distances of a little under 100,000 light years. The Andromeda Nebula, the nearest in the northern hemisphere, and faintly visible to the naked eye, is about 1,500,000 light years away. The faintest and most distant that can be photographed are about 500 million light years away. It is estimated that within that distance there are no fewer than 100 million such systems. In view of recent work, there is now little doubt that our own Galaxy has the same spiral structure as that of many extra-galactic nebulae.

STELLAR SPECTRA

The bright stars and many of the fainter have been examined spectroscopically, and it is found that their spectra can be arranged in a sequence of types, denoted by the letters, O, B, A, F, G, K, M, N, which merge imperceptibly one into the next. The sequence is closely correlated with colour and with surface temperatures. O and B stars, exemplified by the bright white Orion stars, are the hottest and have spectra characteristic of helium and hydrogen. A and F stars, like *Vega* and *Sirius*, are also white stars, characterized by very strong hydrogen lines. Stars from F to K, which include our Sun and *Capella*, show increasing numbers of metallic lines and are yellow in colour. Finally the M and N stars, like *Betelgeuse* and *Antares*, are the coolest, orange or red in colour, and give complex molecular spectra. The redder stars fall into two groups—large, rarefied stars of great luminosity called "giants", and small dense stars of small luminosity called "dwarfs". Certain details in the spectra enable us not only to distinguish between the two groups, but also to give a reliable estimate of a star's "absolute magnitude" or the magnitude it would have if placed at a certain standard distance; this and its apparent magnitude immediately give us its distance.

DISTANCES OF THE STARS

The first determination of a star's distance was made in 1836. The direct or trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit—which nowadays is always done photographically. The distances of a few thousand stars have been found in this way, but the method has very little accuracy for distances greater than about 100 light years. The distances of 4000 stars, found by the spectroscopic method already noted, have been published by Mount Wilson Observatory. This method will carry one, for the brightest stars, to a distance of several thousand light years. The statistical distance of a group of stars can be determined from their mean parallax motion (see *Stellar Motions*). The distances of double stars in orbital motion round one another can be found on the assumption that together they are twice as massive as the Sun.

The absolute magnitude of a "Cepheid" variable star, whose period of light fluctuations is extremely regular, is closely correlated with the period of variation. Hence a knowledge of the absolute magnitude and a measurement of the apparent magnitude give us at once the distance. Thus many extremely luminous Cepheids have given us the distances of the globular clusters or spiral nebulae in which they are situated.

STELLAR MOTIONS

The so-called fixed stars are very slowly changing their positions relative to one another. The apparent movement of each star, known as its proper motion, is due partly to the star's peculiar motion, namely its actual movement through space, and partly to the movement of our own Sun through space,

which causes an apparent motion in the opposite direction, called the star's parallax motion. The parallax motion can be used for determining the average distance of a group. The velocities of stars directly towards or away from the Earth, i.e. their so-called radial velocities, can be found by measuring their spectral lines, the lines being shifted towards the blue end of the spectrum

in an approaching star, and vice versa. From proper motions and radial velocities we find that the solar system is travelling at about 12 miles a second, approximately in the direction of the bright star *Vega*. The Sun and the nearer stars with it, forming the local cluster, tend to move together but the stellar system as a whole is rotating about the centre of the galaxy.

TIMES OF MINIMA OF ALGOL (β PERSEI) in 1957

Jan.	Feb.	Mar.	Apr.	July	Aug.	Sept.	Oct.	Nov.	Dec.
d h	d h	d h	d h	d h	d h	d h	d h	d h	d h

25 10	25 23	26 16	24 08	25 02	25 15	26 04	24 20	25 09	24 01
28 07	28 20	29 12	27 05	27 23	28 12	29 00	27 17	28 06	26 22
31 04			30 01	30 19	31 08		30 13		29 19

These are approximate times of the middle of the period of diminished light.

NEW STARS OR NOVE

A nova is a star which in a few days brightens up many thousands of times, generally by 10 to 15 magnitudes, and then begins to fade, at first rapidly and then more slowly, returning to its original brightness about a year later. Sometimes at greatest brightness novae are easily visible to the naked eye, and occasionally, as with *Nova Aquilae* in 1918, they may temporarily outshine all other stars in the sky. With the routine use of photography, the discovery of faint novae has become much more frequent, usually several being discovered each year. The cause of the brightening is a sudden and very rapid expansion of the star; though the reason for the expansion is not known, it is thought that it may be a normal event in the evolutionary development of every star. The absolute magnitude of a nova at maximum brightness appears to be fairly constant; the appearance of novae in some of the nearer spiral nebulae have given a valuable check on the distances of these extragalactic systems. In a super-nova, which represents a celestial explosion on a still vaster scale, the absolute magnitude at maximum brightness is some hundred million times that of the Sun. Hence super-novae in the most distant systems are becoming of the greatest value in gauging the distances of the remoter parts of the universe.

DOUBLE AND BINARY STARS

A considerable number of stars that appear as single to the naked eye are found to be double in the telescope; in many of these the two bodies are in orbital motion round one another—two suns, in fact, revolving round their common centre of gravity. The periods of these so-called binary stars range from about six years up to several hundred years. Some binaries are so close together

that they appear single even in the largest telescope, their binary character being revealed only by the spectroscopic. When their orbits are nearly edgewise to the Earth, their motions must be periodically directed towards and away from the Earth, so that their spectral lines, previously superimposed, separate and appear double. Spectroscopic binaries are much closer than visual binaries and have periods ranging from less than a day to a few years. If the orbits of a spectroscopic binary are almost exactly edgewise to the Earth, the two components will periodically eclipse one another, so that the combined light of the two stars will fluctuate. The best known of the so-called eclipsing binaries is *Algol*, or β Persei, a star normally of the second magnitude. At perfectly regular intervals of slightly less than 2^d 21^h it fades to about one-third of its normal brightness, taking 4½ hours to reach its minimum, and, after a brief interval, another 4½ hours to regain its full light. The times at which the minima of this star can be conveniently observed are given in the accompanying table. Studies of the three different types of binary stars have given us accurate information in certain cases of their masses, densities and sizes.

VARIABLE STARS

We have already referred to the Cepheid variables, which are generally believed to be pulsating stars, alternately expanding and contracting. Another type is the long-period variable, in which the periods are generally about one year and are not perfectly regular. A good example is *Mira Ceti* with a period of about 330 days, fluctuating between naked eye brightness and tenth magnitude. Finally there are variable stars in which the periods and fluctuations are entirely irregular.

NEBULÆ AND CLUSTERS

Object	Constellation	R.A.	Dec.	Description
		h m	°	
47 Tucanæ	Tucana	0 22	-72.4	2nd finest globular cluster, 42' diam., lucid
M31	Andromeda	0 40	+41.0	Great Spiral Nebula, $2^{\circ} \times \frac{1}{2}^{\circ}$, lucid
Nub. Minor	Tucana	0 50	-73.9	Lesser Magellanic Cloud, 10 sq. deg., lucid
M33	Triangulum	1 31	+30.4	Spiral nebula, $1^{\circ} \times \frac{1}{2}^{\circ}$
H VI 33, 34	Perseus	2 18	+56.9	Double cluster, each 36' diam., lucid
Pleiades	Taurus	3 45	+23.9	Open cluster, $1\frac{1}{2}^{\circ} \times 1^{\circ}$, lucid
Hyades	Taurus	4 26	+15.8	Open cluster, 3° across, lucid
Nub. Major	Dor.-Mensa	5 25	-69.3	Greater Magellanic Cloud, lucid
M1	Taurus	5 32	+22.0	"Crab" nebula, $3' \times 1'$
M42	Orion	5 33	-5.4	"Great" nebula, lucid, round θ Orionis
30 Dor.	Dorado	5 39	-69.1	"Looped" nebula and cluster
M37	Auriga	5 49	+32.5	Nearly globular cluster, 20' diam.
M35	Gemini	6 06	+24.4	Loose cluster, 40' diam., just lucid
H IV 45	Gemini	7 26	+21.0	Planetary nebula. Bright nucleus
M 44	Cancer	8 37	+20.2	"Praesepe" or "Beehive" cluster, 1° sq.
Dun. 297	Carina	10 01	-59.9	Loose cluster, 30' diam., lucid
θ Carinæ	Carina	10 42	-64.2	Open cluster, 70' diam., lucid
Dun. 309	Carina	10 43	-59.4	"Keyhole" nebula, 80' diam., round η Argus
Dun. 323	Carina	11 04	-58.4	Loose cluster, 60' oval, with 6th mag. star
κ Crucis	Crux	12 51	-60.1	Loose cluster, 10' diam., just lucid
ω Centauri	Centaurus	13 24	-47.1	Finest globular cluster, 45' diam., lucid
M51	Can. Ven.	13 28	+47.4	Bright double spiral nebula
M3	Can. Ven.	13 40	+28.6	Globular cluster, 18' diam., lucid
M5	Serpens	15 16	+2.3	Globular cluster, 15' diam., lucid
M13	Hercules	16 40	+36.6	3rd finest globular cluster, 15' diam., lucid
Dun. 520	Scorpius	16 52	-39.4	Loose cluster, 10' diam., lucid
M92	Hercules	17 16	+43.2	Globular cluster, 8' diam., just lucid
Dun. 366	Ara	17 37	-53.6	Globular cluster, 18' diam., lucid
M6	Scorpius	17 37	-32.2	Loose cluster, 25' diam., lucid
M7	Scorpius	17 51	-34.8	Bright open cluster
M23	Sagittarius	17 54	-19.0	Loose cluster, 25' diam.
M20	Sagittarius	17 59	-23.0	"Trifid" nebula, 20' diam.
H IV 37	Draco	17 59	+66.8	Helical planetary nebula
M8	Sagittarius	18 01	-24.4	"Lagoon" nebula, 25' diam., lucid
M22	Sagittarius	18 33	-24.0	Globular cluster, 16' diam.
M11	Scutum	18 48	-6.3	Compact cluster, 10' diam., just lucid
M57	Lyra	18 52	+33.0	"Ring" nebula, 1' diam.
Dun. 295	Pavo	19 06	-60.1	Globular cluster, 28' diam., lucid
M27	Vulpecula	19 57	+22.6	"Dumb Bell" nebula, planetary, 5' diam.
M25	Pegasus	21 28	+12.0	Globular cluster, 6' diam.
M2	Aquarius	21 31	-1.1	Globular cluster, 8' diam.
H IV 18	Andromeda	23 23	+42.2	Small bright planetary nebula

RADIO STARS

In addition to the radiation on centimetre and metre wave lengths from the Sun, similar radio-waves are received from all parts of the sky, the general level of intensity showing a strong concentration towards the Milky Way. A large number of isolated sources have also been detected, and although these have been called "radio-stars" they do not seem to coincide in position with any visible stars. In certain cases the source of the emission has been identified; thus one important source in Taurus is identical with the Crab Nebula, which is known to be the remains of the super-nova of A.D. 1054.

The radiation would appear to be of both galactic and extra-galactic origin. Extra-galactic nebulae

of normal type (such as the Great Nebula in Andromeda) give rise to a radiation which is of the same total intensity as that of our own Galaxy. In a few other cases the source of the radio-waves would appear to be an unusual form of extra-galactic nebula. The very strong source in Cygnus appears to come from a peculiar nebula, whose spectrum suggests that this is actually two extra-galactic nebulae in collision, while two other cases are known in which the nebulous source has a filamentary structure and an abnormal spectrum. There is clearly a suggestion that these radio-waves come from sources in which something unusual is happening, but the subject is growing very rapidly, and is not yet in a position to explain the actual process by which these radio-waves are generated.

The Solar System

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about $5,700^{\circ}\text{C}$., but a relatively short distance inside the surface the temperature reaches $1,000,000^{\circ}$ and deeper in the interior, near the centre, it is believed to be in the region of $14,000,000^{\circ}$. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas"

does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling onto the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40° - 50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (1947 April) covered 7,000 million square miles at its greatest, or approximately 0.7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11.1 years.

Maxima		Minima	
1837.2	1907.0	1833.9	1901.7
1848.1	1917.6	1843.5	1913.6
1860.1	1928.4	1856.0	1923.6
1870.6	1937.4	1867.2	1933.8
1883.9	1947.5	1878.9	1944.2
1894.1		1889.6	1954.3

At present (1956 April) solar activity is rising rapidly and sunspot maximum during the first half of 1957 may be expected. A considerable number of fairly large spots have recently appeared and it is expected that solar activity at the forthcoming "maximum" will be equal to or even exceed the previous record maximum activity occurring during 1947-49.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as H α , the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm (rapid variations in the Earth's magnetic field, probably caused by the arrival of a stream of particles from the flare). A very few large flares have had

associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered skylight is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west, as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutinized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Her apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of her orbit, her elongations extend as far as 47° . Venus is the brightest planet and is several times brighter than any star; she can often be seen in full daylight with the naked eye.

Apart from the beauty of her phases, Venus is a disappointing object in the telescope, her extensive atmosphere being so highly reflective, probably owing to cloud, that her true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 8½-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $31^\circ 32' \text{N}$, $+81^\circ$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Further observations will be required to deduce the speed

of rotation of the planet, but it is considered that this cannot exceed a few weeks.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such light also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1941, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarsest details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, for that at the south pole has been known to disappear completely. Other substances, such as solid carbon dioxide, have been suggested, but frost or snow seems more probable. The nature

portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo changes of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits, which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock flying round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 421 miles in diameter, Pallas 280, Juno 150 and Vesta 241 (miles).

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other

hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931, when carefully planned photographic recording of the planet and the surrounding stars, enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced. Much closer, however, was Hermes, when discovered in 1937, flashing past the Earth only about 400,000 miles away—less than twice the distance of the Moon.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

Jupiter has four principal satellites—the first celestial objects discovered by the telescope, by Galileo. A fifth, very much smaller and fainter, and nearer to Jupiter, was discovered visually by Barnard in 1892. Since then seven others have been found photographically, but all are minute objects. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9h 50½m, while most of those in higher latitudes give periods between 9h 55m and 9h 56m, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878-80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot

is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order $-120^{\circ}\text{C}.$, which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

Saturn has nine satellites, of which the largest Titan, is easily seen with a small telescope. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phoebe, has a retrograde motion.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\text{h}} 15^{\text{m}}$, in higher latitudes $10^{\text{h}} 38^{\text{m}}$ has been found in the northern hemisphere and $10^{\text{h}} 37^{\text{m}}$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disc is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disc, which is quite obvious, though less than $4''$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. A period of rotation of $10\frac{1}{2}$ hours has been determined spectroscopically; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disc of well over $2''$ in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, was discovered by Lassell soon after the discovery of the planet. Triton revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite, found by Kuiper in 1949, revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude. Its orbit is now sufficiently well defined to allow positions of the planet to be given in the almanacs.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^d 7^h 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of 29½ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in

this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24-26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micro-meteorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors, shooting-stars or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids, Perseids, Geminids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams.

Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. At the other end of the scale are the micro-meteorites which are too small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous

patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. The majority of comets are still found accidentally, and it is rare for any observer to search for these objects. Thus the images of no fewer than ten comets were found in the years 1949-1955 on the plates taken by the 48-inch Schmidt telescope at Mt. Palomar. Like the majority of comets, these were all faint objects, and a really bright one only appears, on the average, every few years.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. The spectrum of a comet shows that its luminosity is due partly to reflected sunlight and partly to fluorescence excited by the intensity of the solar radiation. As the comet approaches the Sun, it grows brighter, and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, follow paths in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, the first for which a return was predicted, and whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach of photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

Apart from these two "annuals" there are seven periodic comets whose returns are expected in 1957: Daniel, Grigg-Skjellerup, Kopff (which made a very close approach to Jupiter in 1946), Arend-Rigaux, Pons-Winnecke, Shajn-Shaldach and Encke. Pons-Winnecke will be making its 16th return, and Encke its 45th, since they were discovered early last century. All of these are faint objects; for further details see the British Astronomical Association's *Handbook for 1957*.

The Earth

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^\circ$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^h 56^m$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^h 50^m$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day

as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is diminishing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-west at the end.

In 1576 Robert Norman, an English instrument maker, was impressed by the fact that a compass needle perfectly balanced before magnetization, was no longer in balance after being magnetized, but its north-seeking end was always lower. He devised an instrument to show that, in London, the needle would incline at about 72° to the horizontal if allowed to swing in a vertical plane defined by the direction indicated by an ordinary compass needle.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Cellibrand, observing near Greenwich in 1634,

found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about 2 p.m., after which there is a gradual return eastwards. The amplitude may be as much as $15'$ in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a freely suspended magnetized needle would be directed into the vertical. The north magnetic pole was located by Sir James Ross in 1831 in Arctic Canada at 70° N., 97° W. The Norwegian explorer, Amundsen, in 1904, placed the position about 35 miles north-east of Ross's site. Recent investigations by Canadian surveying parties indicate a position of approximately 73° N., 100° W., but other observations are in close agreement with the results of a recent analysis which place the pole at 76° N., 102° W. From observations by members of Mawson's Australian Antarctic Expedition in 1912 the inferred position of the South magnetic pole was approximately 71° S., 151° E. Results obtained during a French Antarctic Expedition in 1951-2 suggest a position in close agreement with that obtained from the above mentioned analysis, viz. 67° S., 142° E. The two magnetic poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic poles from the north and south geographical poles appear now to be about 1,000 and 1,600 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

It is evident that the compass needle will not, in general, indicate true north. For example, in Greenland it points 50° to the west, and in British Columbia 30° to the east. A line, running through places where the magnetic and true north coincide is known as an agonic line. One such passes from Hudson Bay through Ontario, Ohio, Carolina, the Bahamas, over South America to Buenos Aires and the South Atlantic; a second, from Sweden and the Baltic, across Poland to Rumania, Asia Minor, Egypt and Ethiopia, whence it passes south of Arabia, across northern India to China and eastern Russia, returning through the north-western Pacific Ocean to Siam, and thence through Sumatra to West Australia.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two

phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London			Greenwich		
1580	$11^\circ 15'$	E.	1820	$24^\circ 21'$	W.
1622	$6^\circ 00'$	E.	1840	$23^\circ 20'$	W.
1657	$0^\circ 00'$		1860	$21^\circ 14'$	W.
1692	$6^\circ 00'$	W.	1880	$18^\circ 33'$	W.
1723	$14^\circ 17'$	W.	1900	$16^\circ 29'$	W.
1773	$21^\circ 09'$	W.	1920	$14^\circ 09'$	W.
1805	$24^\circ 08'$	W.	1925	$13^\circ 10'$	W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart. The earliest world-chart of magnetic declination was published in 1701 by Edmund Halley, later Astronomer Royal. Charts of other magnetic elements, such as horizontal intensity, vertical intensity, and dip are also published.

Since the secular change in long periods is not predictable with sufficient accuracy in many parts of the world, information on the subject has to be obtained from fixed observatories. Magnetic Surveys both by sea and land must also be undertaken periodically.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1937 is $7^\circ 59'$ west and allowing an increase of $15'$ for each degree of latitude northwards and one of $33'$ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about $7^\circ 59' + 45' + 165'$, i.e. $11^\circ 29'$ west. The average annual change at the present time is about $7'$ decrease.

The phenomena of terrestrial magnetism have been the subject of continuous study at fixed observatories since early in the 19th century. The number of such observatories now approaches 100—widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Abinger, Surrey (formerly at Greenwich), at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands. The Abinger observatory, where the records are now being affected by artificial magnetic fields consequent upon the spread of industry, is in the process of being replaced by a new observatory at Hartland, North Devon. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the higher regions of the atmosphere. It is undoubted that the latter effects are closely associated with the position of the Sun and with the

state of activity of that body, for the diurnal oscillation of the needle everywhere follows local time, and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar

activity (as indicated by the occurrence of many sunspots) than in the quiet years.

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of auroræ. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicuous spot has been apparent near the centre of the Sun's disc a day or two before; but the appearance of a spot is by no means always followed by the occurrence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the Sun's surface.

The Zodiac

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about 50" a year is due to precession; the signs no longer coincide with the constellations whose names they bear.

It is unknown when or by what race the stars were first grouped into constellations; but undoubtedly the twelve figures that lie in the Zodiac have been considered of special importance from very early times, for indications of them are found more often than any others on ancient monuments. The First Point of Aries must have coincided with this constellation rather more than 2000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but we are on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew

name for the Zodiac. The latter word is evidently of Greek derivation.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about 2½ feet high and 1½ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Bagdad and its date is estimated to be about 1187–1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

These times of entry in 1957 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC

In 1957 the Sun enters—		h
♒ Aquarius, the Water Bearer.....	Jan.	20 08

Tidal Constants

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 167, 168, etc.) and adding thereto the quantities annexed. The time thus found will be Greenwich Time for British, Irish, French and Belgian Ports, and Amsterdam Time for Netherlands Ports. The rise of the tide at Springs and Neaps is given in the last two columns. An * denotes Range of Tide. During the period of SUMMER TIME one hour must be added to the times shown on pp. 167-178, before the system is applied.

The Standard Ports referred to in the heading are given in *italic*.

EXAMPLE—Required times of high water at Stranraer on April 6, 1957:—

(a) Morning Tide.

Appropriate time of high
water at Greenock 15h. 24m. April 5
Add tide interval 11h. 53m.

Sum 27h. 17m.

Subtract 24h. 24h. 0m.
Time of high water at
Stranraer, April 6th ... 3h. 17m. a.m.

(b) Afternoon Tide.

Appropriate time of high
water at Greenock 3h. 33m. April 6.
Add tide interval 11h. 53m.

Sum 15h. 26m.

Subtract 12h. 12h. 0m.
Time of high water at
Stranraer, April 6th ... 3h. 26m. p.m.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20-400 million years. Study of radio-activity has since shown cooling to have been slower. Flowers and others have a good reason to believe that the age of the earth is known to be less than suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALEOZOIC (Old Animal Life) PERIODS include:—

Cambrian, *Ordovician* and *Silurian* rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterised by N.E.-S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Herzian* because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some N.-S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R., *Triassic*, including New Red Sandstone, *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100-200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of

Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Würm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kromdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, i.e., was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Würm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mr. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Rhodesia are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the *Pithecanthropus* group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cromagnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 7 or 8 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillian and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesallie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skillfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palaeolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development

the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, north-west Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated *A.M.* (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated *P.M.* (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores *A.M.* and *P.M.*, and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until mid-night. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnus).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 1658, the lower figure showing the Historical Year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini 1057—Anno Lucis 5957*. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 5 of the present Queen began on 6. 1956. The system is used for dating Acts of Parliament. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI and 1 Elizabeth II.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556,

Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365½ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22. By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting; and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The date Nov. 9 is in accordance with Act of Parliament (24 Geo. II. c. 48), A.D. 1752. The Lord Mayor was previously

elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was finally fixed for Michaelmas Day in 1546, as it now is, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year

after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June, July and August, Mid-

summer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e., about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1957 is MMDCCLX (2710). A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 183. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissextilis dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty- eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 104th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 181). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the

German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700-1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872. China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It should be added that the word *style* actually connotes the date of the beginning of the year. It happened that a change of the latter from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A-G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

1962	March 7	April 22	May 31	June 10	xxiii	Dec. 2

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first day in Lent) can fall at earliest on February 4 and at latest on March 10.

Easter Day can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Regation Sunday is the Sunday next before Holy Thursday (Ascension Day).

Trinity Sunday is the Sunday next after Whit Sunday.

Corpus Christi falls on the Thursday next after Trinity Sunday.

There are not less than xxii and not more than xxvii Sundays after Trinity.

Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (See p. 183.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Nicene Council (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, *Easter-Day* is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that *Easter-Day* shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the

Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 223) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyte Sunday because the people were then Wyte and Wisdo full of" Wylde and illed them

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

Thistle Sunday (Scotland) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and *Abib* was to be the first month of the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II, a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (c. 120 B.C.) which differ little from those adopted at the present day. The year 5717 (1956–57 A.D.) is the 17th year of the 301st Metonic (Minor or Lunar)

Cycle of 19 years and the 5th year of the 208th Solar (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Iyar), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two, for reasons depending on circumstances such as those to be immediately stated. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in

A.M. 5717 (717) is an Embolismic Abundant year of 13 months, 55 Sabbaths and 385 days.

A.M. 5718 (718) is a Common Regular year of 12 months, 51 Sabbaths and 354 days.

A.M. 5719 (719) is an Embolismic Deficient year of 13 months, 54 Sabbaths and 383 days.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.

§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion. Some minor but important points may be mentioned. (a) The time used is that of the meridian of Jerusalem, which is 2h. 21m. in advance of Greenwich time; (b) the Jewish day begins at Sunset, which for computations of the Calendar is assumed to begin at 6 p.m. by time of Jerusalem; (c) in a month that follows one of 30 days, the day preceding its first day is also observed as the day of New Moon, the reason for this being somewhat obscure.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. *Hejira* years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the *Hejira*. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the *Hejira* year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a *Hejira* year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle,

if the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days. *Hejira* year 1376 gives a quotient of 45 and a remainder of 26, and is thus *kabishah*. A.H. 1377 and A.H. 1378, with remainders of 27 and 28, are common years.

HEJIRA YEARS 1376 AND 1377

Name and Length of Month	A.H. 1376	A.H. 1377
Muharram (30)...	1956 Aug. 8	1957 July 29
Saphar (29).....	Sept. 7	Aug. 28
Rabia I (30).....	Oct. 6	Sept. 26
Rabia II (29).....	Nov. 5	Oct. 26
Jomada I (30)....	Dec. 4	Nov. 24
Jomada II (29)....	1957 Jan. 3	Dec. 24
Rajab (30).....	Feb. 1	1958 Jan. 22
Shaaban (29).....	Mar. 3	Feb. 21
Ramadan (30)....	April 1	Mar. 22
Shawwal (29)....	May 1	April 21
Dulkaada (30)....	May 30	May 20
Dulhegga (29 or 30).....	June 29	June 19

NOTE.—A.H. 1378 (common year of 354 days) begins on 1958, July 18.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the *Olympiad* which received the name of the victor at the Games. The first recorded *Olympiad* is that of Choroebus 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1957 is, therefore, the year 2014 of the *Vikrama Era*. In Southern India, the *Saka Era*, with its epoch of March 3, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year A.D. 1957 is 1879 of the *Saka Era*. In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were

translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of

which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31

„ Taishō „ 1912 Aug. 1 to 1926 Dec. 25

„ Shōwa „ 1926 Dec. 26

Hence the year Shōwa 32 begins 1957 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiyōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

TEMPERATURE AND RAINFALL RECORDS

GENERAL: The maximum shade temperature of the air on record is 136° F. at Azizla (Uzzizla) in Tripoli on Sept. 13, 1922; the extreme lowest recorded temperature is -90.4° F. (122° below freezing point) at Verkhoyansk, Siberia, on Feb. 5 & 7, 1892. In the upper air temperatures as low as -133° F. have been recorded—e.g. over Agra (India), at a height of 16½ kilometres (54,000 feet).

The wettest place in the world is generally allowed to be Cherrapunji in Assam, where different stations have given averages of 424 and 499 inches per year, of which 90 per cent. fell in the six months April to September.

U.K.: The maximum shade temperature recorded in the air at 4 feet above the ground is 100° F. at Greenwich Observatory (Aug. 9, 1911).

The lowest shade temperatures are -17° F. at Braemar (Feb. 11, 1895) and -16° F. at Kelfo (Dec. 3, 1879).

The greatest rainfall recorded in a day was at Martinstown, near Dorchester, 11.00 inches in the 24 hours commencing 9 a.m. (July 18, 1955). Annual totals exceeding 240 inches were recorded at The

Stye, Borrowdale, in 1872, 1923, 1928 and 1954; at Ben Nevis Observatory in 1898 and at Llyn Llydaw, Snowdon, in 1909. The smallest annual rainfall was 1.4 inches at Mynydd-y-Ddraig, 1921.

The highest wind speed on record occurred at Llyn Llydaw, Snowdon, on January 31, 1953, in a gust of 125 miles per hour.

SUNSHINE RECORDS IN UNITED KINGDOM, 1955

Of the 330 stations reporting the number of hours of bright sunshine in the *Monthly Weather Reports* published by the Meteorological Office the following include the largest values in 1955, the recorded sunshine being given in hours:—Jersey 2169, Dale Fort (Pembroke) 2131, Guernsey 2129, Torquay 2073, Shanklin 2067, Scilly 2044. 1955 was the sunniest year over England and Wales since 1921, while July was the sunniest July since 1911. Over Scotland 1955 was the sunniest year since before 1906. The largest value in hours for stations in 1955 in Scotland was in the south-west at West Freugh with 1817.

TEMPERATURE AND SUNSHINE AT VARIOUS PLACES IN GREAT BRITAIN

Mean Temperature of the air (° F.) and Bright Sunshine (as mean hours per day) at representative British Health Resorts and Towns during the year July, 1955, to June, 1956, and the calendar year 1955. Also height of Climatological Station above mean sea level, altitude being given in feet. Fuller details of the weather are given in the *Monthly Weather Report* published by the Meteorological Office.

TEMPERATURE AND SUNSHINE AT VARIOUS PLACES IN GREAT BRITAIN

Mean Temperature of the air (° F.) and Bright Sunshine (as mean hours per day) at representative British Health Resorts and Towns during the year July, 1955, to June 1956, and the calendar year 1955. Also height of Climatological Station above mean sea level, altitude being given in feet. Fuller details of the weather are given in the *Monthly Weather Report* published by the Meteorological Office.

Entries of Maximum Temperature cover day period 9-21 h.; Minimum Temperature night period 21-9 h. and are entered to day of reading; Rainfall the 24 hours commencing at 9 h. on day of entry; Sunshine the 24 hours 0-24 h.; Pressure and Wind are recorded at 9 h. Wind is recorded in degrees, E=90°, S=180°, W=270° and N=360°. Pressure is corrected and reduced to M.S.L. Rainfall 1000 mm. = 39.37 in. Averages refer to the following standard periods:—Temperature, Pressure and Sunshine 1921-50; Rainfall, 1881-1915.

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of 69.17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901.8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The following estimate of the total population of the world by continents was published by the United Nations Statistical Office in July, 1955:

Continent, etc.	Area in Square Miles	Estimated Population (June, 1954)
Europe*	2,085,000	406,500,000
Asia*†	10,348,000	1,323,000,000
U.S.S.R.	8,337,000	214,500,000
Africa	11,699,000	216,000,000
North America†	8,523,000	233,000,000
South America	7,037,000	121,100,000
Oceania (including Australasia)	3,201,000	14,200,000
World	51,230,000	2,528,000,000

* Exclusive of U.S.S.R. † Including Central America (British West Indies, Bermuda, British Honduras, Costa Rica, Cuba, Dominican Republic and Haiti, Guatemala, Honduras, Nicaragua, Panama, Puerto Rico and Salvador, etc.) with an area of approximately 310,000 square miles (see p. 200); North America (Canada, Mexico, U.S.A. and Alaska), approximately 8,213,000 sq. miles.

† According to a United Nations estimate the population of Asia, excluding the far North, will have increased by 1980 to between 1,816,000,000 and 2,227,000,000.

The total population of the world rose from 2,493,000,000 in mid-1953 to 2,528,000,000 in mid-1954, an increase of 35,000,000. The figure for Asia includes an estimate (1948) for China of 463,493,000. It should be noted that the total population of China is given in the reports of the 1953 Census of China as 601,938,035. Of this figure 574,205,940 was stated to have been reached by direct census and 27,732,095 by "indirect census," the latter including 7,590,298 in Formosa, 11,743,320 Chinese resident or studying abroad and 8,397,477 in remote border regions where transport facilities were exceptionally bad.

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,337,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles; the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles; Brazil 3,220,000 sq. miles, and China 3,000,000 sq. miles.

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12' N., to Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include

the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

The population of Europe has been estimated by Dr. R. R. Kuczynski at 100,000,000 in 1600; 152,500,000 in 1700; 173,000,000 in 1789; and at 525,000,000 in 1934.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (89° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 52° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of Central America, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available.

With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

The *League of Nations Handbook*, which contained a large amount of statistical material, ceased to appear soon after the outbreak of the war of 1939-1945 and has been replaced by the *Monthly Bulletin of Statistics* prepared by the Statistical Office of the United Nations with the assistance of the statistical offices of the various governments and of specialized agencies. The *Monthly Bulletin* is published at the headquarters of the United Nations at Great Neck (Lake Success Branch), New York, U.S.A.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°–60° E. long., *Middle East* (Baluchistan to Burma) 60°–100° E. long., *Far East* (Siam to Japan) 100°–160° E. long.

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.—Adjoining Nebuchadnezzar's palace, 60 miles south of Bagdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHESUS.—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.
- V. THE COLOSSUS OF RHODES.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

THE WORLD'S LAKES

South America: Aconcagua	22,976
Australia: Kosciusko	7,328
New Zealand: Cook	12,349
Oceania: Charles Louis	18,000

* The Caucasus being taken physically, if not politically, as in Asia.

PRESIDENTS OF THE FRENCH REPUBLIC

The Third Republic

Committee of Public Defence	4 Sept. 1870
Louis Adolphe Thiers	31 Aug. 1871
Marshal MacMahon	24 May, 1873
Jules Grévy	30 Jan. 1879
Sadi Carnot (assass.: 14 June, 1894) ..	3 Dec. 1887
Jean Casimir Perier	27 June, 1894
François Félix Faure	17 Jan. 1895
Emile Loubet	18 Feb. 1899
Armand Fallières	18 Jan. 1906
Raymond Poincaré	17 Jan. 1913
Paul Deschanel	18 Feb. 1920
Alexandre Millerand	20 Sept. 1920
Gaston Doumergue	13 June, 1924
Paul Doumer (assass.: 7 May, 1932) ..	13 June, 1931
Albert Lebrun (deposed 1940)	10 May, 1932

The Fourth Republic

Maréchal Pétain, "Vichy" nominee, 11 July, 1940.

[After the liberation of Paris, General Charles de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault. On Oct. 13, 1946, a new Constitution was adopted and on Jan. 16, 1947 Vincent Auriol was elected by the National Assembly and the Council of the Republic.]

Vincent Auriol, born 1884	16 Jan. 1947
René Coty, born 1882	17 Jan. 1954

POPPES FROM 1700

Sovereign Pontiff.	Family Name.	Elected.
Clement XI	Albani	1700
Innocent XIII	Conti	1721
Benedict XIII	Orsini	1724
Clement XII	Corsini	1730
Benedict XIV	Lambertini	1740
Clement XIII	Rezzonico	1758
Clement XIV	Ganganelli	1769
Pius VI	Braschi	1775
Pius VII	Chiaramonti	1800
Leo XII	della Genga	1823
Pius VIII	Castiglioni	1829

Sovereign Pontiff.	Family Name.	Elected.
Gregory XVI	Cappellari	1831
Pius IX	Mastai-Ferretti	1845
Leo XIII	Pecci	1878
Pius X	Sarto	1903
Benedict XV	della Chiesa	1914
Pius XI	Ratti	1922
Pius XII	Pacelli	1939

Adrian IV (Nicholas Brakespear, the only Englishman elected Pope) was born at Langley, near St. Albans; elected Pope, on the death of Anastasius IV, 1154; died 1159.

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth. King Edward VIII was installed as Prince of Wales in Caernarvon Castle on July 13, 1911.

INDEPENDENT PRINCES, A.D. 844 to 1282

Rhodri the Great	844-878

See p. 215.

CHILDREN OF HER MAJESTY

H.R.H. PRINCE CHARLES PHILIP ARTHUR GEORGE, Duke of Cornwall and Duke of Rothesay, Earl of Carrick and Baron Renfrew, Lord of the Isles and Great Steward of Scotland, born at Buckingham Palace, November 14, 1948.

H.R.H. PRINCESS ANNE ELIZABETH ALICE LOUISE, born at Clarence House, August 15, 1950.

MOTHER OF HER MAJESTY

H.M. QUEEN ELIZABETH THE QUEEN MOTHER (Elizabeth Angela Marguerite) (daughter of the 14th Earl of Strathmore and Kinghorne), Lady of the Garter, Lady of the Thistle, Order of the Crown of India, Grand Master of the Royal Victorian Order, Dame Grand Cross of the Order of the British Empire, Royal Victorian Chain, Doctor of Civil Law, Doctor of Literature, Colonel-in-Chief the Bays, 7th Queen's Own Hussars, 9th Queen's Royal Lancers, Bedfordshire and Hertfordshire Regiment, Black Watch, K.O.Y.L.I., the Manchester Regiment, R.A.M.C., and the Royal Australian Army Medical Corps, Commandant-in-Chief W.R.A.C., Hon. Colonel London Scottish, Herts. Regt. (T.A.), City of London Yeomanry, Toronto Scottish Regt., and Black Watch (Royal Highland Regiment of Canada). Born Aug. 4, 1900, married April 26, 1923, Prince Albert Frederick Arthur George of Windsor, Duke of York, who succeeded to the throne as KING GEORGE VI, Dec. 11, 1936, and died February 6, 1952.

Residences.—Clarence House, St. James's, S.W.1.; Castle of Mey, Caithness, Scotland.

SISTER OF HER MAJESTY

H.R.H. PRINCESS MARGARET ROSE, C.L., G.C.V.O., Colonel-in-Chief, the 3rd The King's Own Hussars, the Suffolk Regiment, the Highland Light Infantry, Queen Alexandra's Royal Army Nursing Corps, Women's Royal Australian Army Corps, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame Grand Cross of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; born at Glamis Castle, Angus, Scotland, Aug. 21, 1930.

ORDER OF SUCCESSION TO THE THRONE

The Queen's son and daughter are in the order of succession to the throne, and after the Princess Margaret, the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal, her elder son and his sons, and her younger son and his son; then Princess Arthur of Connaught; then Lord Carnegie, son of the late Countess of Southesk; then Prince Olav of Norway and his children; then the children of the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alexandra of Hohenlohe-Langenburg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be fruitless to pursue the investigation any further.

Precedence in England

The Sovereign.	Comptroller of H.M.'s Household
The Duke of Edinburgh	Vice-Chamberlain of H.M.'s Household.
The Duke of Cornwall.	Secretaries of State under the degree of Baron.
The Duke of Gloucester.	Viscounts' eldest Sons.

Masters in Lunacy.

Companions and Commanders, e.g. C.B. ; C.S.I. ; C.M.G. ; C.L.E. ; C.V.O. ; C.B.E. ; D.S.O. ; M.V.O. (4th) ; O.B.E. ; I.S.O.

Eldest Sons of younger Sons of Peers.

Baronets' eldest Sons.

Eldest Sons of Knights in the same order as their Fathers.

M.V.O. (5th) ; M.B.E.

Younger Sons of the younger Sons of Peers.

Baronets' younger Sons.

Younger Sons of Knights in the same order as their Fathers.

Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers ; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands ; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross and Dames Commanders, *see* pp. 298-300.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor ; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—*See* Index.

The Queen's Household

George IV. Jan.	29, 1820	July 19, 1821
William IV. June	26, 1830	Sept. 8, 1831
Victoria June	20, 1837	June 28, 1838
Edward VII. Jan.	22, 1901	Aug. 9, 1902
George V. May	6, 1910	June 22, 1911
Edward VIII. Jan.	20, 1936	..
George VI. Dec.	11, 1936	May 12, 1937
Elizabeth II. Feb.	6, 1952	June 2, 1953

THE QUEEN'S BIRTHDAY, 1957

The date for the observance of the Queen's Birthday in 1957, both at home and abroad, will be Thursday, June 13. For the Customs and Excise Department, and the officers and servants of the dock companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 22.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a velvet coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the shield of St. George and the Star of the Order of the Garter. The Knights receive a small pension in addition to their Army pensions and quarters in Windsor Castle. They take part in the ceremonies of the Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.
Governor, Maj.-Gen. Edmund Hawes Smith, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Lt.-Colonel L. W. La T. Cockcroft, D.S.O., M.V.O.; Colonel J. A. Fraser, D.S.O., D.C.M.; Lt.-Colonel J. M. Mackenzie, D.S.O.; Lt.-Colonel L. Holbech, C.V.O.; D.S.O., O.B.E., M.C.; Lt.-Colonel F. C. Hitchcock, O.B.E., M.C.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Lt.-Colonel E. P. O. Boyle, M.V.O.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000
Salaries of Household	185,000
Expenses of Household	121,800
Royal Bounty, alms and special services	13,200
Supplementary Provision	95,000
	<u>£475,000</u>

Queen Elizabeth the Queen Mother ..	£70,000
The Duke of Edinburgh	40,000
The Duke of Gloucester	35,000
The Princess Margaret	6,000
The Princess Royal	6,000

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

March 31 (1900).—Birthday of Duke of Gloucester.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 25 (1897).—Birthday of the Princess Royal.

May 24.—Empire Day.

June 2 (1953).—Coronation Day.

June 10 (1921) Birthday of the Duke of Edinburgh.

June 13.—Queen's Official Birthday, 1957.

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 10.—Remembrance Sunday, 1957.

Nov. 14 (1948).—Birthday of the Duke of Cornwall.

Nov. 20 (1947).—Her Majesty's Wedding Day.

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases

where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) Daily from the announcement of the death up to and including the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of Great Britain.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1957

" 30.	St. Andrew.
Dec. 21.	St. Thomas.

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1898 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament; and from the date of the Union with Ireland 28 Irish Peers were so elected for life; the number of the latter is now reduced to 5 and the 23 vacancies are unlikely to be filled.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example.

Fees for Dignities were payable as Inland Revenue until abolished by the Finance Act of 1937. They were in the form of revenue stamps, as follows: for a Dukedom £350; a Marquessate £300; an Earldom £250; a Viscounty £200; a Barony £150; a Baronetcy £100.

PEERAGES CREATED SINCE THE LAST ISSUE

EARLS (2)—Attlee; Woolton. **VISCOUNTS (5)**—Cherwell; Cilcennin; Crookshank; De L'Isle; Ingleby. **BARONS (7)** Astor of Hever; Cohen of Birkenhead; Colyton; Evershed; Godber; McCorquodale of Newton; Weeks.

PEERAGES EXTINCT SINCE THE LAST ISSUE

VISCOUNT (1) Guillamore (l. cr. 1831); **BARONS (6)** Alness (cr. 1934); Courthope (cr. 1945); Perry (cr. 1938); Porter (Life Peerage, cr. 1938); Schuster (cr. 1944); Trent (cr. 1929).

PEERS WHO ARE MINORS

(As at Jan. 1, 1957)

ROYAL DUKES (1): Cornwall (b. 1948).
MARQUESES (2): Dufferin and Ava (b. 1938); Londonderry (b. 1937).

EARLS (5): Chichester (b. 1944); Erne (b. 1937); Gowrie (b. 1939); Kingston (b. 1943); Norbury (b. 1939).

VISCOUNTS (3): Gormanston (b. 1939); Gough (b. 1941); Ulswater (b. 1942).

SCOTTISH LORDS OF COURT OF SESSION

The word "Lord" prefixed to the names of Judges of the Court of Session, or to titles different from their names, is strictly an official honour and may be compared with the terms "Hon. Mr. Justice" and "Lord Chief Justice" in England, which replaced the titles "Baron" and "Lord Chief Baron." An Order in Council of February, 1905, authorized the retention of this Scottish honour for life, irrespective of retirement, and the style "Lady" is to be enjoyed by the wife and to continue in widowhood, though not after remarriage; but no distinction is conferred upon children. Lord in this case takes the prefix "Hon." in place of "Rt. Hon." of actual Lords, unless the Judges are also Privy Counsellors, in which case "Rt. Hon." is correct (see p. 253). There are 14 Lords of Session (see Index). The Chairman of the Scottish Land Court has the same rank and tenure as if he had been appointed a Judge of the Court of Session.

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A resolution to admit Peeresses in their Own Right to the House of Lords was defeated in that house in 1930, but when submitted on July 27, 1949, was carried by a substantial majority. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

DUCHESS IN HER OWN RIGHT.

Created.	Title, Order of Succession, Name, etc.	Eldest Son or Heir.
1900	<i>Fife</i> (and), Alexandra (H.R.H. Princess Arthur of Connaught), b. 1891, s. 1912, w. (see p. 214).	Lord Carnegie, b. 1920.

COUNTESSSES IN THEIR OWN RIGHT.—Style, The Countess of — Addressed as, My Lady.

Created.	Title, Name, etc.	Eldest Son or Heir.
1861	<i>Cromartie</i> , Sibell Lilian Mackenzie, b. 1878, s. 1895, w.	Viscount Tarbat, M.C., b. 1904.
1643 S.	<i>Dysart</i> , Wenefryde Agatha Greaves, b. 1889, s. 1935, w.	Lady Rosamund G., b. 1914.

LIFE PEERS

This class, once not infrequent, is now restricted to a very small number of *Law Lords*, at present nine. The first recent creation occurred in 1856 in the case of Lord Wensleydale, when the Peers decided that a Life Temporal Peer was not entitled to a seat in their House. An Act was accordingly passed giving power to the Sovereign to elevate two Judges of Appeal into Life Barons of Parliament and in 1876 the number was enlarged, so that the House now admits all the Lords of Appeal in Ordinary, whether active or retired. The wives of these Peers take the title of "Lady" with precedence as Baronesses and children of these Life Peers rank next after those of hereditary Barons and take the courtesy title of "Honourable."

Courtesy Titles (in actual use in 1957)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough and the "Earl of Aboyne" to the Marquessate of Huntly, and "Viscount Acheson" heir to the Earldom of Gosford; *the titles of second heirs are also given; e.g. Viscount Savernake, eldest son of the "Earl of Cardigan" heir to the Marquessate of Ailesbury.

.. In addition to these Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled "The Master of ——" e.g. "The Master of Falkland," eldest son of Viscount Falkland.

Marquesses.

*Blandford—Marlborough
Bowmont—Roxburghe
Douglas & Clydesdale
—Hamilton

Ancestor
Wodehouse—Kimberley
Worsley—Yarborough

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—S. or L. appended to the date of creation denotes a Scottish or Irish title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. R. indicates that the Peer is a representative peer for Scotland or Ireland. The mark * signifies that there is no "of" in the Marquessate or Earldom so designated; b. signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, &c. The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Clerk of the Council, W. G. Agnew.

Deputy Clerk of the Council, E. N. Landale.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) — P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of Army and Royal Air Force and (1942) Mercantile Marine only and rank immediately before the 4th Class of the F. be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 130 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

Trevelyan, Mrs. Janet Penrose, 1936.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since the death of Queen Victoria. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

Princess Wilhelmina of the Netherlands.

SECOND CLASS.

H.H. the Princess Marie Louise.
H.R.H. the Princess Alice, Countess of Athlone.

H.R.H. the Princess Alfonso d'Orleans-Bourbon.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

H.M. THE QUEEN, 1947.

H.M. Queen Elizabeth the Queen Mother, 1931.

H.R.H. the Princess Margaret, 1947.

H.R.H. the Princess Royal, 1919.

H.R.H. the Duchess of Gloucester, 1937.

H.R.H. the Duchess of Kent, 1937.

H.H. the Princess Marie Louise, 1893.

Margaret, Dowager Baroness Amptill, 1900.

Lady Victoria Patricia Helena Ramsay, 1911.

Margaret Etienne Hannah, Marchioness of Crewe, 1911.

Frances Charlotte, Viscountess Chelmsford, 1916.

Marie Adelaide, Marchioness of Willington, 1917.

Dorothy Evelyn Augusta, Countess of Halifax, 1926.

Pamela, Countess of Lytton, 1927.

H.H. Maharani Regent of Travancore, 1929.

Doreen Maud, Marchioness of Linlithgow, 1935.

Doreen Geraldine, Dowager Baroness Brabourne, 1937.

Eugenie Marie, Countess Wavell, 1943.

Florence Amery, 1945.

H.H. Maharani Tara Devi of Jammu and Kashmir, 1946.

Edwina Cynthia Annette, Countess Mountbatten of Burma, 1947.

Agnes Anne, Baroness Clydes-muir, 1948.

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.,
(and Ireland marked 1).

Badge of Baronets
of Scotland or Nova Scotia
(marked 2).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, *at the time of going to press*, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir —" (first or Christian name) and in writing as "Sir A— B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Sir Gerald Wollaston, K.C.B., K.C.V.O.; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Miss E. Blackwell; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 17, 1956)

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Baronetages Extinct (Since last issue)—

Bell of Mynthurst (U.K. 1909); Cowan (U.K. 1921); Ellis (U.K. 1932); Morrison-Bell of Harpford (U.K. 1923); Scarisbrick (U.K. 1909).

Baronetages Created—

Ackroyd; Anstruther-Gray; Gammans; Houldsworth; Howard; Hutchison of Rossie; Joynson-Hicks; Ponsonby; Smyth.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of —, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

- H.M. Queen Elizabeth The Queen Mother, K.G., Kt., C.I., G.M.V.O.

D.B.E.

NOTABLE HONOURS OF THE YEAR

Among the honours notified in the New Year and Birthday Honours Lists, 1956, were the following:
(For Peerages and Baronages created, see pp. 224 and 298).

ORDER OF MERIT

Lord Hailey.

COMPANIONS OF HONOUR

Visct. Cecil of Chelwood.
E. Gordon Craig.
Sir John Kotelawala.
Prof. Arnold Toynbee.
Arthur Waley.

G.C.B. (Military)

Air Chief Marshal Sir Basil Embry.
Admiral Sir Guy Grantham.
General Sir Eric Mansergh.

G.C.B. (Civil)

Sir Harold Emmerson.
Sir Ivone Kirkpatrick.

G.C.M.G.

Sir Frederick Hoyer Millar.
Sir Charles Peake.

G.B.E. (Military)

General Sir Miles Dempsey.
General Sir John Whiteley.

G.B.E. (Civil)

Earl De La Warr.
Sir John Erskine.
Sir John Morison.
Sir Christopher Warner.

K.C.B. (Military)

Vice-Admiral E. G. A. Clifford.
Air Marshal L. Darvall.
Vice-Adm. W. W. Davis.
Vice-Adm. M. H. Elliott.
Lieut.-Gen. Sir Francis Festing.
Lieut.-Gen. R. A. Hull.
Vice-Adm. C. John.
Air Marshal R. B. Jordan.
Lt.-Gen. G. W. Lathbury.
Air Marshal T. N. McEvoy.
Air Vice-Marshal D. Macfadyen.
Lieut.-Gen. W. P. Oliver.

K.C.B. (Civil)

Sir Frederick Brundrett.
Sir Gilbert Laithwaite.
E. F. Muir.
Sir Gordon Radley.
Air Marshal Sir Robert Sandby.

K.C.M.G.

C. B. Duke.
Air Commodore J. A. Easton (ret.).
Charles Empson.
Brig. R. Gambier-Parry.
J. W. Nicholls.
T. O. Pike.
H. S. Potter.
D. H. F. Rickett.

F. B. A. Rundall.
H. S. Stephenson.
R. E. Turnbull.
J. G. Ward.

K.C.V.O.

A. G. Anderson.
Prof. A. F. Blunt.
Lt.-Col. H. V. B. De Satgé.
Prof. A. E. Richardson.
Sir George Wilkinson, Bt.

K.B.E. (Military)

Air Marshal R. L. R. Atcherley.
Air Vice-Marshal L. J. V. Bates.
Maj.-Gen. A. D. Campbell.
Vice-Adm. J. W. M. Eaton.
Maj.-Gen. W. R. N. Hinde.
Lieut.-Gen. B. C. H. Kimmins.
Lieut.-Gen. H. Murray.
Air Marshal G. E. Nicholls.
Vice-Adm. C. F. W. Norris.
Rear-Adm. L. E. Rebbeck (ret.).
Vice-Adm. W. G. A. Robson.
Air Vice-Marshal J. R. Whitley.

K.B.E. (Civil)

Sir Hugh Beaver.
Maj. F. W. Cavendish-Bentinck.
J. K. Dunlop.
Sir Claude Gibb.
Alexander Glen.
Lord Glentanar.
Sir Fergus Graham, Bt., M.P.
J. D. Harford.
D. A. E. Harkness.
E. G. Harwood.
Sir Edwin Herbert.
Vyvyan Holt.
H. N. Hume.
A. McD. B. Hutt.
C. G. Jarrett.
C. E. Key.
W. H. T. Luce.
Sir Thomas Merton.
V. H. Raby.
W. J. Sullivan.
D. C. Watherston.

D.B.E. (Military)

Brig. Mary Raitton.

D.B.E. (Civil)

The Countess of Albemarle.
Miss Peggy Ashcroft.
Miss Margot Fonteyn.
Prof. Kathleen Lonsdale.
Mrs. L. N. Sayers.

KNIGHTS BACHELOR

A. I. Anderson.
Eric Ashby.
J. G. Banks.

W. F. Beale.
Brig. E. H. L. Beddington.
S. P. Bedson.
Maj. A. H. Bibby.
B. H. Blackwell.
Brig. A. D. Buchanan-Smith.
Maj. R. Bullin.
John Burgoyne.
Prof. H. G. Champion.
Douglas Clarke.
H. W. Clarke.
Prof. W. M. Coldstream.
Charles Connell.
C. B. Crabbe.
His Hon. E. T. Dale.
Henry Dalton.
G. H. Dowty.
Col. B. M. M. Edwards.
G. U. Farrant.
Lt.-Col. F. Flower.
L. E. Ford.
H. S. Gibson.
Col. A. G. Gomme-Duncan, M.P.
Harry Hardy.
R. G. Hawtrey.
Frank Higginson.
F. C. Hooper.
Leonard Hutton.
E. J. F. James.
H. F. H. Jones.
Brig. A. H. Killick.
Hersch Lauterpacht, Q.C.
William Lyons.
James McKinnon.
G. M. McNaughton.
Arthur Massey.
Prof. W. Mercer.
V. E. Negus.
George North.
W. C. Norton.
Tom O'Brien, M.P.
F. J. Osborn.
Thomas Peacock.
Prof. W. J. Pugh.
Prof. A. G. Pugsley.
A. S. Quartermaine.
Brig. R. H. Rayner.
J. J. Robertson.
S. G. Rowlandson.
W. W. F. Shepherd.
Brig. E. O. Skaife.
A. C. M. Spearman, M.P.
Col. F. C. Stern.
John Stewart.
G. S. Summers, M.P.
J. W. T. Thomas.
A. R. A. Weston.
Thomas Williamson.
M. G. Willmott.
J. F. Wolfenden.
Prof. S. Zuckerman.

THE VICTORIA CROSS, *V.C.*

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1856.*

The *V.C.* is worn before all other decorations, on the left breast, and consists in a cross-pattee of bronze, $1\frac{1}{2}$ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." In all three fighting Services, holders of the *V.C.* below commissioned rank (or below warrant rank in the Royal Navy) receive an annuity of £10 a year concurrently with the award, plus an addition of 6d. a day (£9 2s. 6d. a year) to the recipient's pension. In the case of a posthumous award, £50 is credited to the estate of a recipient, or the balance of £50 if that amount has not been paid during his lifetime; an additional annuity of £5 is paid for each bar, such bar being added for additional acts of bravery which would have entitled the recipient to the Victoria Cross if he or she had not already received it. In the event of an annuitant being unable to obtain a livelihood on leaving the Service, the amount of the annuity may be increased to £75. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, GC

The ribbon is dark blue threaded through a bar adorned with laurel leaves

FOR GALLANTRY

INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942).

The GC is worn before all other decorations (except the VC) on the left breast and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon 1½ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939. In the list below, the date of award of the Empire Gallantry Medal and of its exchange for the George Cross is noted.

SURVIVING RECIPIENTS OF THE GEORGE CROSS

THE GRAND PRIORY IN THE BRITISH REALM OF THE VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907, 1926 and 1955), St. John's Gate, Clerkenwell, E.C.1.

Sovereign Head H.M. Queen Elizabeth II.
Grand Prior H.R.H. The Duke of Gloucester,
 K.G., P.C., K.T., K.P., G.M.B., G.C.M.G.,
 G.C.V.O.

Lord Prior The Lord Wakehurst, K.C.M.G.

The Order had its origin in Jerusalem and Acre as an international lay confraternity for the relief of crusaders, and was later sovereign in Rhodes and in Malta, where its Knights kept galleys and galleons, to attack the Barbary Corsairs and to prevent the spread of Turkish rule in the Mediterranean, from 1530 till 1798. Like other ancient Orders of Chivalry, the Order of St. John had also Priorities and Commanderies in the different countries of Europe, those in England and Scotland being dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798, after which the Grand Magistrature eventually settled in Rome, with various Priorities and associations elsewhere in Europe.

In 1827 the Knights of France, with the authority of the Grand Magistrature, assisted in the reconstruction of what is now the Grand Priory in the British Realm of the Most Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at the Gatehouse which still remains in Clerkenwell as part of the ancient Priory of England. A Royal Charter was granted to this British Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a Maltese Cross of white enamel, with a lion and unicorn in alternate angles, of gold or silver according to grade, with a black watered ribbon; a medal is conferred for acts of gallantry involving risk of life. By a Royal Charter of June 22, 1926, members are divided into five classes:—(1) Bailiffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; and (5) Serving Brothers and Sisters. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, style, title or precedence.

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is responsible for the education of the public in First Aid and kindred subjects; and the St. John Ambulance Brigade.

Prelate—His Grace the Archbishop of Canterbury.
Chancellor—Lieut.-Gen. Sir Henry Pownall, K.C.B.,
 K.B.E., D.S.O., M.C.

Secretary-General—Charles Tunstall Evans, C.M.G.
Director-General of the St. John Ambulance Association, Horace F. Parshall, T.D.

Receiver-General—L. G. Whyte.

Hospitalier—Brig. Sir Stewart Duke-Elder, K.C.V.O.

Almoner—Major Robert Lindsay Loyd, O.B.E., M.C.
Genealogist—The Hon. Sir George Bellew, K.C.V.O.
Director of Ceremonies—C. H. C. Pirie-Gordon,
 O.B.E., D.S.C., F.S.A.

Commissioner-in-Chief, St. John Ambulance Brigade—(Vacant).

Librarian—Major Richard Williams, F.S.A.

Registrar—Sir Harry Luke, K.C.M.G., D.Litt.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons, and for 23 *Parliamentary Secretaries* of whom not more than 21 may be members of the House of Commons and not fewer than 2 of the Lords.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906.

THE PRINCIPAL PARTIES IN PARLIAMENT

(1900-1955)

General Election	Conservative and Unionist	Liberal	Labour
1900.....	402	185	11
1906.....	158	387	41
1910 (Jan.)....	273	275	40
1910 (Dec.)....	272	272	42
1918.....	382 (a)	161 (b)	74 (c)
1922.....	347	118 (d)	122
1923.....	258	157	191
1924.....	414	39	150
1929.....	260	59	287
1931.....	471	72 (e)	65 (f)
1935.....	387	54 (g)	166 (h)
1945.....	189	25 (i)	396 (j)
1950.....	298 (k)	9	315 (l)
1951.....	320 (m)	6	296 (l)
1955.....	344 (m)	6	277 (n)

NOTES.—(a) Including 48 Non-Coalition Unionists. (b) Including 28 Non-Coalition Liberals. (c) Including 63 Non-Coalition Labour. (d) Liberal National 59; Liberal 59. (e) Liberal National 35 (Simon); Liberal 33 (Samuel); 4 (Lloyd George). (f) National Labour 13 (MacDonald); Labour 52 (Henderson). (g) Liberal

National 33; Liberal 21. (h) National Labour 8; Labour 154; I.L.P. 4. (i) Liberal National 13; Liberal 22. (j) Labour 393; I.L.P. 3. (k) Incl. Nat. Liberal. (l) Irish Nationalists (a) and Speaker make total of 625. (m) Including associates. (n) Sinn Féin (a) and Speaker make total of 630. The 2 Sinn Féin members have since been disqualified, and there are now 346 Conservative and associate members.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," p. 318). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Counsellors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Counsellors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's Commonwealth tour in 1953-54, the Counsellors of State were Queen Elizabeth the Queen Mother, Princess Margaret, the Duke of Gloucester, the Princess Royal, and the Earl of Harewood.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. The Regency Act, 1953, has designated the Duke of Edinburgh as Regent, should a Regency become necessary during the minority of the children of her present Majesty.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusionists who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *tóraidhe* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679-80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendancy in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days, a period which has been surpassed only by the Rt. Hon. W. L. Mackenzie King, Prime Minister of the Dominion of Canada, 1921-30 and from 1935 to 1948.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political

reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951 and 1955 Elections.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour Candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a five-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,000; the Captain of the

Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant do.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £1,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £1,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl Fortescue), the Captain of the Queen's Bodyguard of the Yeomen of the Guard (The Earl of Onslow) and the (Political) Lords in Waiting (The Lords Hawke, Fairfax of Cameron and Chesham).

The *Labour Whips* are: The Earl of Lucan (*Chief Whip*); The Lords Burden, Kershaw and Haden-Guest.

The *Liberal Whip* is The Lord Amulree.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* are: H. W. Bowden (*Chief Whip*); E. Popplewell; A. Pearson; H. E. Holmes; W. A. Wilkins; A. C. Allen; G. E. C. Wigg; J. T. Price; G. H. R. Rogers.

The *Liberal National Whip* is Sir Herbert Walter Butcher.

The *Liberal Whip* is Major J. Grimond.

SCOTTISH REPRESENTATIVE PEERS

(Elected at the Palace of Holyroodhouse, May, 1955).

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland specially convened for that purpose.

Earl of Rothes.	Lord Saltoun.
Earl of Caithness.	Lord Sinclair.
Earl of Perth.	Lord Sempill.
Earl of Haddington.	Lord Balfour of
Earl of Lindsay.	Burleigh.
Earl of Airrie.	Lord Fairfax of
Earl of Selkirk.	Cameron.
Earl of Breadalbane	Lord Reay.
and Holland.	Lord Polwarth.
Lord Forbes.

PRIME MINISTERS.—Sir Robert Walpole, first Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the Journal of the House of Lords, the grievance being that the Sovereign should reside in confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

Her Majesty's Ministry

As reconstructed on Dec. 20, 1955

Prime Minister and First Lord of the Treasury, The Rt. Hon. Sir Anthony Eden, K.G., M.C., M.P., born June 12, 1897.
Secretary of State for Foreign Affairs, The Rt. Hon. John Selwyn Brooke Lloyd, C.B.E., T.D., Q.C., M.P., born July 28, 1904.
Lord President of the Council and Leader of the House of Lords, The Most Hon. the Marquess of Salisbury, K.G., P.C., born Aug. 27, 1893.
Chancellor of the Exchequer, The Rt. Hon. Harold Macmillan, M.P., born Feb. 10, 1894.
Secretary of State for Commonwealth Relations, The Rt. Hon. the Earl of Home, born July 2, 1903.
Lord High Chancellor, The Rt. Hon. Viscount Kilmuir, G.C.V.O., born May 29, 1900.
Secretary of State for the Home Department and Minister for Welsh Affairs, Major the Rt. Hon. Gwilym Lloyd George, T.D., M.P., born Dec. 4, 1894.
Secretary of State for the Colonies, The Rt. Hon. Alan Tindal Lennox-Boyd, M.P., born Nov. 18, 1904.
Secretary of State for Scotland, The Rt. Hon. James Gray Stuart, M.V.O., M.C., M.P., born Feb. 9, 1897.
Minister of Labour and National Service, The Rt. Hon. Iain Norman Macleod, M.P., born Nov. 11, 1913.
President of the Board of Trade, The Rt. Hon. George Edward Peter Thorneycroft, M.P., born July 26, 1909.
Minister of Housing and Local Government, The Rt. Hon. Duncan Sandys, M.P., born Jan. 24, 1908.
Lord Privy Seal and Leader of the House of Commons, The Rt. Hon. Richard Austen Butler, C.H., M.P., born Dec. 9, 1902.
Minister of Defence, The Rt. Hon. Sir Walter Turner Monckton, K.C.M.G., K.C.V.O., M.C., Q.C., M.P., born Jan. 17, 1891.
Chancellor of the Duchy of Lancaster, The Rt. Hon. the Earl of Selkirk, O.B.E., A.F.C., born Jan. 4, 1906.
Minister of Agriculture and Fisheries, The Rt. Hon. Derick Heathcoat-Amory, M.P., born Dec. 26, 1899.
Minister of Education, The Rt. Hon. Sir David McAdam Eccles, K.C.V.O., M.P., born Sept. 18, 1904.
Minister of Works, The Rt. Hon. Patrick George Thomas Buchan-Hepburn, M.P., born April 2, 1901.

The above form the Cabinet

MINISTERS OF CABINET RANK

First Lord of the Admiralty, The Rt. Hon. Viscount Hailsham, born Oct. 9, 1907.
Secretary of State for War, The Rt. Hon. Anthony Henry Head, C.B.E., M.C., M.P., born 1906.
Secretary of State for Air, The Rt. Hon. Evelyn Nigel Chetwode Birch, O.B.E., M.P., born 1906.
Minister of Supply, The Rt. Hon. Reginald Maudling, M.P., born March 7, 1917.
Minister of Transport and of Civil Aviation, The Rt. Hon. Harold Arthur Watkinson, M.P., born Jan. 25, 1910.
Ministers of State (Foreign Affairs), The Most Hon. the Marquess of Reading, P.C., C.B.E., M.C., T.D., Q.C., born Jan. 10, 1889; The Rt. Hon. Anthony Nutting, M.P., born Jan. 11, 1920.
Minister of State (Colonial Affairs), The Rt. Hon. John Hugh Hare, O.B.E., M.P., born Jan. 22, 1911.
Minister of State (Scottish Office), The Rt. Hon. Lord Strathclyde, born March 20, 1891.
Minister of State (Board of Trade), The Rt. Hon. Austin Richard William Low, C.B.E., D.S.O., T.D., M.P., born May 25, 1914.
Minister of Pensions and National Insurance, The Rt. Hon. John Archibald Boyd-Carpenter, M.P., born June 2, 1908.
Minister of Fuel and Power, The Rt. Hon. Aubrey Jones, M.P., born Nov. 20, 1911.
Postmaster-General, The Rt. Hon. Charles Hill, M.D., M.P., born January 15, 1904.
Minister of Health, The Rt. Hon. Robert Hugh Turton, M.C., M.P., born Aug. 8, 1903.
Minister without Portfolio, The Rt. Hon. the Earl of Munster, born Feb. 17, 1906.

PARLIAMENTARY UNDER SECRETARIES AND OTHER MINISTERS

Attorney-General, Rt. Hon. Sir Reginald Manningham-Buller, Bt., Q.C., M.P.
Solicitor-General, Sir Harry Hylton-Foster, Q.C., M.P.

Scottish Office (Joint), J. N. Browne, C.B.E., M.P.; J. Henderson Stewart, M.P.; N. M. S. Macpherson, M.P.
Supply, F. J. Erroll, M.P.
Trade, D. C. Walker-Smith, T.D., Q.C., M.P.
Transport and Civil Aviation (Joint), Rt. Hon. A. H. E. Molson, M.P.; J. D. Profumo, O.B.E., M.P.
Treasury, Rt. Hon. E. R. G. Heath, M.B.E., M.P. (do.) **Financial Secretary**, Rt. Hon. H. Brooke, M.P. (do.) **Economic Secretary**, Sir Edward Boyle, Bt., M.P.
Junior Lords, M. Redmayne, D.S.O., M.P.; G. Wills, M.P.; Hon. P. R. Legh, M.P.; E. B. Wakefield, C.I.E., M.P.; J. H. Harrison, T.D., M.P.
War Office, F. H. R. Maclean, C.B.E., M.P.
Works, J. R. Bevins, M.P.

Leader of the Opposition, The Rt. Hon. Hugh Todd Naylor Gaitskill, C.B.E., M.P., born April 9, 1906.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state, and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. The Finance Bill, which imposes taxation, and Consolidated Fund Bills, which authorise expenditure, must begin in the Commons and may not be amended by the Lords in any respect whatever. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of a Parliament), which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid but (since 1946) are entitled, if they attend regularly, to travelling expenses from their homes to the Palace of Westminster.

Since 1911 members of the House of Commons have received salaries and travelling facilities over the railways, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. In 1954 a sessional expense allowance of £2 for each Parliamentary day, excluding Fridays, was introduced. Members of Parliament contribute at the rate of £12 per annum towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits; income from investments in 1954-55 was £2,612 and expenditure in grants £5,534. The Capital Account (1955) stood at £83,855.

THE HOUSE OF LORDS

The House of Lords consists of some 870 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are either peers by descent of England, Great Britain or the United Kingdom, or peers of new creation, or "Law Lords" (who are life peers), or Irish Representative Peers (28 elected for life until 1922; now 23 vacancies), or Scottish Representative Peers (16 elected for duration of Parliament). About half the peerages of the Lords Temporal have been created since 1920. An Irish Peer not in the House of Lords is eligible for election as a member of the House of Commons for an English, Welsh or Scottish constituency.

THE HOUSE OF COMMONS

By the Representation of the People Act (1885) membership was increased from 658 (at which it had stood since 1801 through the Act of Union with Ireland) to 670, and by a similar Act (1918) it was increased to 707. By the Government of Ireland Act (1920) and the Irish Free State Agreement Act (1922) membership was decreased to 615. Irish representation being reduced from 105 to 13

members. By the Representation of the People Act of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the House of Commons (Redistribution of Seats) Act, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kept wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1240. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 231-ton Hour Bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 22½ feet in diameter, the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sunrise to sunset during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The Lord High Chancellor of England is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 16, 1742.

Henry Pelham, *Whig*, Aug. 25, 1743.
Duke of Newcastle, *Whig*, May 18, 1751.
Duke of Devonshire, *Whig*, Nov. 16, 1756.
Duke of Newcastle, *Whig*, July 2, 1757.
Earl of Bute, *Tory*, May 28, 1762.
George Grenville, *Whig*, April 15, 1763.
Marquess of Rockingham, *Whig*, July 10, 1765.
Earl of Chatham, *Whig*, Aug. 2, 1766.
Duke of Grafton, *Whig*, Dec. 1767.
Lord North, *Tory*, Feb. 6, 1770.
Marquess of Rockingham, *Whig*, March 27, 1782.
Earl of Shelburne, *Whig*, July 13, 1782.
Duke of Portland, *Coalition*, April 4, 1783.
William Pitt, *Tory*, Dec. 7, 1783.
Henry Addington, *Tory*, March 21, 1801.
William Pitt, *Tory*, May 16, 1804.
Lord Grenville, *Whig*, Feb. 10, 1805.
Duke of Portland, *Tory*, March 31, 1807.
Spencer Perceval, *Tory*, Dec. 6, 1809.
Earl of Liverpool, *Tory*, June 16, 1812.
George Canning, *Tory*, April 30, 1827.
Viscount Goderich, *Tory*, Sept. 8, 1827.
Duke of Wellington, *Tory*, Jan. 26, 1828.
Earl Grey, *Whig*, Nov. 24, 1830.
Viscount Melbourne, *Whig*, July 18, 1831.
Sir Robert Peel, *Tory*, Dec. 26, 1834.
Viscount Melbourne, *Whig*, March 14, 1835.
Sir Robert Peel, *Tory*, Sept. 6, 1841.
Lord John Russell, *Whig*, July 6, 1846.
Earl of Derby, *Tory*, Feb. 28, 1852.
Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
Viscount Palmerston, *Liberal*, Feb. 10, 1855.
Earl of Derby, *Conservative*, Feb. 25, 1858.
Viscount Palmerston, *Liberal*, June 18, 1858.
Earl Russell, *Liberal*, Nov. 6, 1865.
Earl of Derby, *Conservative*, July 6, 1866.
Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
W. E. Gladstone, *Liberal*, Dec. 9, 1868.
Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
W. E. Gladstone, *Liberal*, April 28, 1880.
Marquess of Salisbury, *Conservative*, June 24, 1885.
W. E. Gladstone, *Liberal*, Feb. 6, 1886.
Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
W. E. Gladstone, *Liberal*, Aug. 18, 1892.
Earl of Rosebery, *Liberal*, March 3, 1894.
Marquess of Salisbury, *Conservative*, July 2, 1895.
A. J. Balfour, *Conservative*, July 12, 1902.
Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
H. H. Asquith, *Liberal*, April 8, 1908.
H. H. Asquith, *Coalition*, May 26, 1915.
D. Lloyd George, *Coalition*, Dec. 7, 1915.
A. Bonar Law, *Conservative*, Oct. 23, 1922.
S. Baldwin, *Conservative*, May 22, 1923.
J. R. MacDonald, *Labour*, Jan. 22, 1924.
S. Baldwin, *Conservative*, Nov. 4, 1924.
J. R. MacDonald, *Labour*, June 8, 1929.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
N. Chamberlain, *Coalition*, May 28, 1937.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Conservative*, May, 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
Sir A. Eden, *Conservative*, April 6, 1955.

Of the 42 Prime Ministers 18 sat in the House of Lords and 23 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat, in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. Recent decisions of the House refused a writ to Viscountess Rhondda (on the ground of her sex) in 1922 and granted one to the second Lord Sinha in 1939, eleven years after his father's death in 1928. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the *Chiltern Hundreds* and the *Manor of Northstead* as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on sufrage, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within two minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (see p. 313).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g. ineligibility to sit or owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the *Clerk of the House of Commons*, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than three demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing exclusively with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made that the question be now put. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the Closure. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of

Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The Speaker of the House of Commons is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscounty. The Speaker's most severe disciplinary measure against a member is to *Name him*. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion that the Speaker do now leave the Chair. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660. Sir H. Grimston.	1685. Sir John Trevor.
1661. Sir E. Turner.	1688. H. Powle.
1673. Sir J. Charlton.	1694. Paul Foley.
1673. Edwd. Scymour.	1698. Sir T. Lyttleton.
1678. Sir Robt. Sawyer.	1700. Robert Harley
1679. Serjeant William Gregory.	(Earl of Oxford and Mortimer).
1680. W. Williams.	1702. John Smith.

PARLIAMENT OF GREAT BRITAIN.

1708. Sir Richard Onslow (Lord Onslow).	1761. Sir John Cust.
1710. Wm. Bromley.	1770. Sir F. Norton.
1713. Sir Th. Hammer.	1780. C. W. Cornwall.
1715. Spencer Compton (Earl of Wilmington).	1788. Hon. W. Grenville (Lord Grenville).
1727. Arthur Onslow.	1789. Henry Addington (Viscount Sidmouth).

PARLIAMENT OF UNITED KINGDOM.

1801. Sir John Mitford (Lord Redesdale).	
1802. Charles Abbot (Lord Colchester).	
1817. Charles M. Sutton (Viscount Canterbury).	
1835. James Abercomby (Lord Dunfermline).	
1839. Charles Shaw-Lefevre (Viscount Eversley).	
1857. J. Evelyn Denison (Viscount Ossington).	
1872. Sir H. W. B. Brand (Viscount Hampden).	
1884. Arthur Wellesley Peel (Viscount Peel).	
1895. William Court Gully (Viscount Selby).	
1905. James W. Lowther (Viscount Ullswater).	
1921. John Henry Whitley.	
1928. Hon. Edward Algernon FitzRoy.	
1943. Col. D. Clifton Brown (Viscount Ruffside).	
1951. William Shepherd Morrison.	

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Twenty-four women were elected at the 1955 Election (14 Labour, 9 Conservative and 1 Ulster Unionist), 3 more than at the Dissolution.

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

One hundred deposits were forfeited at the 1955 Election, 3 more than in 1951. Deposits were lost by 60 Liberal candidates, 15 Communists, 7 Welsh Nationalists, 5 Sinn Féin, 5 Independents, 3 Conservatives, 3 Independent Labour, 1 Labour and 1 Scottish Nationalist. Fifteen out of 17 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits was lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker. President, The Rt. Hon. Sir Anthony Eden, K.G., M.C., M.P.

Vice-Presidents, The Viscount Stansgate, D.S.O., D.F.C.; The Marquess of Salisbury, K.G.; The Earl of Scarborough, K.G.; The Rt. Hon. I. S. B. Lloyd, C.B.E., T.D., Q.C., M.P.; The Rt. Hon. H. T. N. Gaiskell, C.B.E., M.P. [M.P. Chairman, Col. M. Stoddart-Scott, O.B.E., T.D., M.D., Secretary, Maj-Gen. W. A. Dimoline, C.B., C.B.E., D.S.O., M.C.]

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" at the Coronation of His late Majesty King George V. in 1911, between representatives of the Dominion Parliaments and Members of the Lords and Commons, for the purpose of exchanging information and visits between Members of Parliament of the Commonwealth. The Association has branches in the Parliaments of the United Kingdom, Canada, Australia, New Zealand, the Union of South Africa, India, Pakistan, Ceylon, Federation of Rhodesia and Nyasaland, Malta, Gold Coast and Nigeria, in the State Parliaments of Australia, the Provincial Parliaments of Canada, the State Legislatures of India and Pakistan, the Territorial Parliaments of Southern Rhodesia and Northern Rhodesia, the Regional Legislatures of Nigeria and the Cameroons, the Parliaments of Bermuda, Bahamas, Barbados, Jamaica, Trinidad and Tobago, Kenya, Uganda, Mauritius, Northern Ireland, Jersey, the Isle of Man and Sierra Leone, and in the Legislatures of British Guiana, the Windward Islands, the Leeward Islands, British Honduras, Gambia, Singapore and the Federation of Malaya, making a total of 76 branches. The name of the Association was changed to its present form in 1948. Commonwealth Parliamentary Conferences and General Meetings are held in alternate years and meetings of the General Council every year, in different countries of the Commonwealth. There are associated groups in the Congress of the United States and the Parliament of the Republic of Ireland. Chairman of the General Council, J. W. Higgerty (S. Africa).

Secretary-General and Editor of Publications, Sir Howard d'Egville, K.B.E., LL.D., Houses of Parliament, S.W.1.

Secretary, United Kingdom Branch, Major J. G. Lockhart, C.B.E., Westminster Hall, Houses of Parliament, S.W.1.

REDISTRIBUTION OF CONSTITUENCIES

The Constituencies underwent considerable redistribution before the 1955 General Election as a result of the first general review by the Boundary Commissions under the *House of Commons (Redistribution of Seats) Act, 1949*. The number of constituencies was increased from 625 to 630. Eleven new divisions were created in England, and six abolished. In addition there were major alterations to 152 constituencies and minor redistribution in 30 constituencies in England, substantial changes in 20 divisions and minor ones in 7 divisions in Scotland, and minor alterations in 6 Welsh constituencies. There were no changes in Northern Ireland. The boundary commissions are permanent bodies and are entrusted with the task of maintaining a review of the present constituencies, and recommending any further changes which may become necessary.

VOTES CAST AT THE GENERAL ELECTIONS, 1945, 1950, 1951 AND 1955
AND AT BY-ELECTIONS SINCE 1945

General Election, 1945	
Labour.....	11,985,733
Conservative.....	8,693,858
Liberal.....	2,253,197
Liberal National.....	759,884
Ulster Unionist.....	441,109
Independent.....	287,345
Irish Nationalist.....	148,078
National.....	125,299
Communist.....	102,780
Common Wealth.....	96,247
Independent Conservative.....	40,948
Independent Labour Party.....	36,153
Scottish Nationalist.....	30,594
Welsh Nationalist.....	14,887
Democratic.....	1,809
Independent Socialist.....	472
Total.....	25,018,393

By-elections, 1945-50

At 50 by-elections between the General Elections of 1945 and 1950, the following votes were cast:—

Labour.....	740,914
Conservative and National Liberal.....	641,540
Ulster Unionist.....	87,435
Liberal.....	49,730
Independent.....	35,647
Irish Nationalist.....	24,422
Scottish Nationalist.....	13,040
Welsh Nationalist.....	12,775
Independent Labour Party.....	8,367
Communist.....	5,087

General Election, 1950

Labour.....	13,265,610
Conservative.....	11,166,026
National Liberal and Conservative.....	983,623
Ulster Unionist.....	352,334
Liberal.....	2,621,489
Independent.....	112,318

Labour Independent.....	26,014
Welsh Nationalist.....	17,680
Scottish Nationalist.....	10,630
Independent Labour Party.....	4,112
Total.....	28,769,477

By-elections, 1950-51

At 15 by-elections between the General Elections of 1950 and 1951 the following votes were cast:—

Conservative and Associate.....	265,535
Labour.....	264,977
Irish Labour.....	30,883
Liberal.....	2,752
Independent Labour Party.....	1,366
Communist.....	729
Independent.....	453

General Election, 1951

Labour.....	13,949,105
Conservative and Associate.....	*13,718,069
Liberal.....	730,552
Irish Nationalist.....	94,587
Others.....	19,640
	10,920
	7,299
	4,388
	62,135
Total.....	28,596,695

* Four Ulster Unionists were returned unopposed.

By-elections 1951-55

At 45 contested by-elections between the General Elections of 1951 and 1955, the following votes were cast:—

Conservative and Associate.....	751,421
Labour.....	705,176
Liberal.....	28,216
Welsh Nationalist.....	10,243
Independent.....	3,405
Scottish Nationalist.....	2,931
Communist.....	1,457

General Election, 1955

Conservative and Associate.....	13,311,938
Labour.....	12,405,246
Liberal.....	722,395
Sinn Féin.....	152,310
Welsh Nationalist.....	45,119
Communist.....	33,144
Scottish Nationalist.....	12,112
Others.....	78,490
Total.....	26,760,754

There were no unopposed returns. Votes cast totalled 76.8 per cent. of the electorate, as against 82.8 per cent. in 1951 and 84 per cent. in 1950. Conservative candidates and their associates received 48.8 per cent. of the votes cast (48.05 in 1951), Labour 46.3 per cent. (48.72), Liberals 2.7 per cent. (2.53), and others 1.2 per cent. (0.7).

By-elections, 1955-56

At 13 contested by-elections since the General Election of 1955, the following votes have been cast:—

Conservative and Associate.....	186,577
Labour.....	168,055
Sinn Féin.....	54,516
Liberal.....	29,597

THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division at the General Election of 1955.

ABBREVIATIONS.—A.-P. = Anti-Partition; C. = Conservative; Comm. = Communist; I.L.P. = Independent Labour Party; Ind. = Independent; L. = Liberal; Lab. = Labour; Nat. L. = National Liberal; Scott. Nat. = Scottish Nationalist; S.F. = Sinn Féin; U.U. = Ulster Unionist; Welsh Nat. = Welsh Nationalist. An asterisk * denotes membership of the last House for the same division; an obelisk †, for a different division.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1955-56

THE NEW OPPOSITION LEADER.—After twenty years as leader of the Parliamentary Labour Party, Mr. Attlee on Dec. 7 resigned the position, and on the same day it was announced by the Prime Minister that the Queen had approved that the dignity of an earldom should be conferred upon him. His colleagues at once placed on record their high appreciation of his services, and on the following day warm tributes were paid in the House of Commons to his work by Sir Anthony Eden and Mr. Clement Davies, for which Mr. Herbert Morrison expressed his own and his Party's thanks. The Prime Minister said that Mr. Attlee in the 33 years he had sat in the House had never made a personal enemy and he recalled the courage, the patience and the tenacity which Mr. Attlee had shown when they sat together in the Cabinet during the war. Mr. Morrison described his leader as essentially a Parliamentarian and said the House would agree that he not only served his party but served the country and the world to the best of his ability. To succeed Mr. Attlee in the leadership of the Opposition, three candidates were nominated on Dec. 8—Mr. Hugh Gaitskell, Mr. Herbert Morrison and Mr. Aneurin Bevan. Mr. Bevan agreed to withdraw to permit the unopposed election of Mr. Morrison, the deputy leader, if Mr. Gaitskell would also do so, but Mr. Gaitskell declined. The result of the ballot among Labour members was announced on Dec. 14, Mr. Gaitskell being elected by an overall majority of 47. Of 267 votes cast, Mr. Gaitskell received 157, Mr. Bevan 70 and Mr. Morrison 40. Mr. Morrison, after congratulating the new leader, tendered his resignation as deputy leader, and the party accepting this decision with regret passed a resolution of appreciation of his services. Subsequently, Mr. James Griffiths was elected deputy leader by 121 votes against 111 cast for Mr. Bevan. The House of Lords admitted Earl Attlee to membership on Jan. 25, when he took his seat and subscribed to the roll with the traditional ceremony.

THE FIGHT AGAINST INFLATION.—A considerable part of the Parliamentary proceedings of the year was occupied with measures to deal with the economic situation and the inflationary difficulties which arose. Immediately after the resumption of the first session in the autumn of 1955, Mr. R. A. Butler, then still Chancellor of the Exchequer, presented a second Budget, designed not to raise revenue but to improve the balance of payments. Introducing his proposals on Oct. 26, Mr. Butler said the Government regarded them as essential if the economic situation was to be tackled thoroughly and efficiently but he added that there had been a distinct improvement in the past month. The chief proposals were an increase in the purchase tax and the inclusion of some household goods previously exempt, a higher profits tax, a reduction and eventually the abolition of the housing subsidy, and a review of the spending programmes of local authorities. The Chancellor said the Government were determined to restore the balance of the economy without delay. The problems demanded a dual policy, combining both incentive and restraint, but while the incentive side of the Govern-

ment's policy, initiated in his April Budget, had worked to the advantage of the country as a whole, the disciplinary side, in the form of restriction on credit, had operated less rapidly than had been expected and intended. There were too many signs that new pressures might develop to reinforce those already shown, among the indications being the unsatisfied demand for materials and labour, new wage claims, and the continued rise in the level of dividend distribution. However, he added, we had room in which to make effective our determination to reinforce and maintain sterling, but we had no room for complacency. Coming to the action to be taken, he said the measures of restraint already imposed would be maintained and allowed to develop their full effect. The progressive operation of credit policy would now be reinforced by further, and more direct, measures designed to restrain demand in both the public and the private sectors of the economy, and to reduce expenditure on both investment and personal consumption. He claimed that the main possibilities of major economies in Government expenditure did not lie in cutting back existing

services, but in restraining the rate of development and in moderating the capital outlay on the expansion of services over the whole of the field where its cost affected Government finance. In the public sector the investment expenditure of the local authorities was a very important element. In future, housing subsidies would be concentrated as far as possible on slum clearance and providing new industrial facilities for excess population. The Exchequer housing subsidy for other purposes would be abolished as soon as possible and meanwhile would be reduced substantially. In addition the Government were asking local authorities not only to observe particular restraint in their current expenditure, but to review their capital expenditure to ensure that there was no increase on that of the previous year. To exercise a check on the volume of Government lending to local authorities, the Public Works Loan Board would ask all applicants for advances about their ability to raise the finance on their own credit, either in the stock market or the mortgage market. Local authorities who received loans would have to pay a rate reflecting not Government credit, as at present, but the credit of local authorities of good standing in the market for loans of comparable periods. The nationalized industries were surveying their capital projects and resources, and their proposals for future investment would be examined with a much more critical eye than in previous years, and while the hospital programmes already announced would not be reduced, hospital boards were being asked to ensure that only the most urgent works were undertaken. The roads programme already announced would also be carried out but would not be extended or accelerated and certain Government buildings would be discontinued, among them the new Colonial Office on the Westminster Hospital site. The Post Office must restrain the rate of its capital investment, and postal and telephone charges would be brought into closer relationship with the cost of the services offered. To encourage saving, the Chancellor announced the issue of a new Defence Bond, and the increase in the maximum permitted holding of the current issue of Savings Certificates from 1,000 units to 1,200 units. Then he came to his proposals regarding purchase tax, an increase of one-fifth in each rate, subject to certain exemptions, so that 25 per cent. became 30 per cent., 50 per cent., 60 per cent., and 75 per cent., 90 per cent. In addition, certain articles which were not taxed, among them a range of kitchenware, tableware and other household goods, would be made subject to the lowest rate of 30 per cent. Another change was the abolition of the D allowance schemes, which exempted a range of items of clothing, footwear, textiles, furs and furniture from purchase tax. These would now be liable to tax at rates of 5 per cent. or 10 per cent., furs remaining chargeable at 50 per cent. To give some help to the silverware and cut glass industry, the tax on most of these craft products would be reduced. The alterations should produce in a full year additional revenue of approximately £75,000,000, and their effect on the cost of living index would be an increase of a little under one point. Mr. Butler said he would not increase personal incomes or death duties, but he declared that profits should make some contribution to the effort of restraint which was required of all sections of the community and had decided to increase the rate of profits tax on distributed profits from 22½ per cent. to 27½ per cent. The yield would in a full year approach £40,000,000. In conclusion, the Chancellor said that the Government had always taken action in time and looked forward, and it was their conviction that by this action we could look forward

not only to many years of successful government but to a continuance of our standard of living and to the happiness of our people. The Opposition took the unusual course of challenging the resolution increasing the purchase tax, which was carried by 314 to 227, a Government majority of 87. Mr. Attlee led the Labour criticism and drew a picture of a young married couple sitting in a room without any furniture, looking sadly at the cut glass and silverware which their economic aunt had bought for them on the cheap. The net effect of this, as with all Mr. Butler's Budgets, he declared, was that it hit the small man. Mr. Gaitskell delivered the main Opposition attack on the following day, and said that the Chancellor had persistently and wilfully misled the public about the economic situation for electoral reasons, an accusation which Mr. Butler indignantly denied in an interjection. The Opposition, said Mr. Gaitskell, took no exception to the increase in the tax on distributed profits, but he criticized the proposal for dealing with local government finance, and described the reimposition of purchase tax on household goods as exceptionally mean and the abolition of the housing subsidy as outrageous. He concluded with a call for Mr. Butler's resignation, declaring that he had behaved in a manner unworthy of his high office and that he was plainly unable to carry on with credit any longer. The general debate was concluded on the third day, the Chancellor reserving his reply until Oct. 31, when after the Finance Bill had been read a first time, the House rejected by 329 to 261 a Labour motion of censure on the Government because of "incompetence and neglect" in their economic and financial policy and because the new proposals were unjust. Mr. Herbert Morrison, who introduced the resolution, said there was a strong case for its acceptance because of what was believed to be a deliberate deception, with malice aforethought, of the country during and before the general election. The Chancellor said the sole object of the supplementary Budget was to combat inflation, and he believed that it had brought that extra further pressure to bear in the right direction. He remarked that he would have thought that Mr. Gaitskell's disastrous attempt at forecasting in his only Budget of 1951 would have given him a lively recognition of some of the difficulties. In that year, we continued to lose our life-blood from reserves, but no measures were announced for correcting the situation and all that was shown by the records was that cheese imports were reduced. "So this marvellous roaring lion was a little mouse that could only gnaw at a bit of cheese," declared Mr. Butler amid Ministerial cheers. Turning to the alterations in purchase tax, he said the object of the Budget was to clear the way for exports by curbing home consumption and the over rapid surge forward of investment, and the difficulties that would be caused by the increases had been grossly exaggerated by the Opposition. The Government believed that the Budget would be successful and they asked the House to send out some sort of message to the country that if we faced the burdens in the right spirit we might progress forward to save that full employment and that standard of living which the Government had done so much to defend. The Bill was read a second time on Nov. 8 by 320 to 255, and in committee several Labour amendments to delete or vary the increases in purchase tax were defeated by majorities ranging from 40 to 50, the Chancellor making a few minor concessions in respect of certain articles which provided employment for blind or disabled persons. When the third reading was carried by 305 to 248 on Dec. 13, the Chancellor said he thought it would be wrong

for traders not to realize that purchase tax was an imposition which must stay as long as the inflationary difficulties remained. The Bill received the Royal Assent on Dec. 21, when Parliament adjourned for the Christmas vacation. By the time sittings were resumed the Prime Minister had made a number of changes in the Cabinet, Mr. Butler becoming Leader of the House of Commons and Mr. Harold Macmillan succeeding him as Chancellor. On Feb. 17 the latter had to outline further measures to counter inflation, or, as he expressed it, "to deal with the overload which has put such a strain on our balance of payments." He said we must make an even more determined attack on the roots of the trouble and enforce still further reductions in investment and consumption. After remarking that he regarded the increase of the Bank rate from $\frac{1}{4}$ per cent. to $\frac{5}{8}$ per cent. on the previous day as a timely move, which would reinforce the further disinflationary measures on which the Government had decided, Mr. Macmillan said he must look to the banks to continue their efforts to reduce the total of their advances. He proposed that no investment allowance should be given in respect of capital expenditure becoming due and payable, after that day, but that such expenditure should qualify for the rate of initial allowance in force in 1953. The Government also proposed to tighten up the terms of hire purchase. The minimum down payments for consumer goods would be increased from the present 15 per cent. and 33 $\frac{1}{3}$ per cent. to 20 per cent. and 50 per cent. respectively. Powers would be taken to control hiring of certain of these goods, and control would be extended to a comprehensive range of capital goods subject to a 50 per cent. down payment and maximum repayment period of two years. The Government must also play their part, and he had reviewed the plans of departments. Useful works already started must be completed, but some not yet started would be delayed. The nationalized industries had co-operated and had further reduced their programmes by just under £50,000,000, and capital expenditure financed direct by the central Government would be reduced by over £20,000,000 below what had been planned. School and hospital building programmes would stand, but a proportion of the former would be postponed until next year. Mr. Macmillan declared that it would not be right to put the whole burden on the future, and that in present circumstances, with full employment and high wages, it was difficult to justify the continuance of general consumer subsidies on their present scale. The Government had decided to reduce the bread subsidy, costing about £40,000,000 a year, by one penny on the 7 $\frac{1}{4}$ loaf, representing an immediate reduction in the subsidy of some £18,000,000 a year, and to increase the retail price of milk by a halfpenny a pint, saving some £20,000,000 a year of the subsidy of £37,000,000 a year. The increase in the two would add one point to the cost of living index, the Chancellor said. The problem of inflation, he went on, must be mastered if our personal lives were not to be darkened by continual anxiety and uncertainty and our country's position in the world seriously undermined. He believed that, although these measures would result in some sacrifice and some disappointment, they would be accepted as wise and timely. Leading the Labour criticism, Mr. Harold Wilson asked whether the introduction of building licences would not provide a better hope of stopping frivolous building expenditure than the "blunt instrument" of investment allowances, but the Chancellor said they had no intention of introducing the old licence system, and in reply to another question said they did not intend to have any form

of import control. After a two-day debate, the House of Commons on Feb. 21 carried by 325 to 258 a Government motion affirming its confidence in the measures to deal with the economic situation, and defeated a Labour amendment expressing no confidence in the Government or its proposals by 325 to 259. Mr. Macmillan, who introduced the resolution, said he would never be a party to any talk about the need artificially to create unemployment, and appealed to the Opposition not to set out deliberately to hamper and defeat the Government's efforts to cure inflation unless the Government adopted their particular method. On the cut in the subsidies on bread and milk, he claimed that the vast majority of those who would feel the changes at all would feel a loss which was only a fraction of the gains they had made in recent years. In fighting to end inflation they were fighting to defend full employment, and he urged that everyone should face inflation as a common enemy. Mr. Hugh Gaitskell, the new Opposition leader, winding up the Labour case, welcomed the Chancellor's declaration for full employment but asked whether this would be preserved by relying solely on general measures of deflation. He warned the Government that they would not get the self-discipline for which Mr. Macmillan had appealed and the sense of responsibility and restraint unless and until it was felt that fair play would be involved.

THE SPRING BUDGET.—In his first regular Budget opened on April 17, Mr. Macmillan continued the economy drive and outlined several proposals to increase private savings, including the institution of premium bonds on which no interest would be paid but which would provide the chance of winning tax-free prizes up to £1,000 after draws every three months. Among other features were an increase in the tobacco duty, the removal of the remainder of the bread subsidy, and an extension of family allowances. The Chancellor said that our reserves were really insufficient for their purpose and we were really trading beyond our capital resources. Measures already taken to correct the position had taken longer to act than had been expected and they had to be continually reinforced. In their efforts to check inflation, the Government had relied very largely on monetary policy, and he claimed that on the credit side it had operated with increasing effect. Turning to the figures for the year, Mr. Macmillan said that the summary above the line showed an estimated surplus of £148,000,000 and an actual surplus of £397,000,000, while below the line receipts were £219,000,000 and payments £757,000,000, the total net payments being £538,000,000, or £46,000,000 less than expected. The total of the National Debt now stood at £27,040,000,000, whereas on Sept. 3, 1939, it stood at about £8,400,000,000 and on Aug. 4, 1914, at about £645,000,000, and he commented that there were few nations, victors or vanquished, in these 40 years that had so honourably tried to meet their obligations at home and abroad. On the basis of existing taxation, the Chancellor said that Inland Revenue duties were expected to yield £2,700,000,000 in 1956-57, an increase of £161,000,000, and from income tax they expected to collect £2,102,000,000, or £159,000,000 more than last year. The estimated revenue from Customs and Excise duties was £2,130,000,000, an advance of £117,000,000, tobacco providing £680,000,000 of the total and purchase tax £510,000,000. The total tax revenue on existing taxation he estimated at £5,190,000,000, an increase of £297,000,000, and total expenditure at £4,745,000,000 an increase of £183,000,000. In

the latter total, defence accounted for £1,499,000,000, only £5,000,000 above last year's estimate, but civil expenditure was £112,000,000 higher at £2,481,000,000, the major item in the increase being £107,000,000 for social services. Above the line, the prospects were for a surplus of £445,000,000 on the basis of existing taxation and measures already announced. After stating that the Government had decided that the removal of the remainder of the bread subsidy should take effect at the end of September, the Chancellor said that for the next two years the capital requirements of the nationalized industries would be met out of the Exchequer to ensure stricter control of the whole operation of providing capital. He estimated that in 1956-57 issues of about £350,000,000 might be required. "So disappears, by my own murderous act, my beautiful overall balance," he commented. Any benefits which he might propose must make no inroads on next year's surplus and any prizes must be more than balanced by impositions. All his proposals, he declared, might be summarized by the word "savings". He first announced a new issue of National Savings Certificates on August 1, a 15s. certificate rising to 20s. in seven years, with a limit of 600 units. The current issue would remain on sale until August 1, and the limit on holdings of that issue would be raised from 1,000 units to 1,400 units. The current 4 per cent. issue of Defence Bonds would be closed and a new issue at 4½ per cent. would be encashable at par on six months' notice, but with a premium of £2 per cent. if held for the full currency of ten years. He did not propose to change the rate of interest of 2½ per cent. for deposits in the Post Office and Trustee Savings Banks, but he would exempt from income tax, the first £15 of income accruing from deposits costing the revenue about £8,000,000 in 1956-57 and about £10,000,000 in a full year. Relief from income tax and surtax would be granted in respect of premiums up to £500 or 10 per cent. of income paid by the self-employed to provide a deferred annuity on retirement, costing £7,000,000 this year but much more in subsequent years, when the relief might lead to new savings. The rate of stamp duty on house purchase would be reduced, costing £4,000,000 this year and £6,250,000 in a full year. Then Mr. Macmillan came to "something completely new for the saver in Great Britain"—a premium bond. This would not be a pool or a lottery where you spend your money, he said. The investor would save his money and get it back when he needed it, but as long as he held it saved his reward instead of interest would be the chance of winning a tax-free prize. The details would be announced later, but it would be a £1 bond and there would be a limit on individual holdings, 250 or a little more. Each bond held for a fixed period would qualify for a draw to take place every three months. Although not finally settled, the Chancellor said he had in mind to give an annual prize fund equal to 4 per cent. of the bonds drawn, divided into prizes ranging from a few top prizes of £1,000 to a larger number of prizes of smaller amount. Because of the organization necessary he doubted whether the issue could be made before the new year. Mr. Macmillan declared that the Government must make an effort of saving parallel to that which it was urging on private individuals. They had decided that a review of all Government expenditure, civil and military, should be put in hand at once. They were determined that this economy drive should bring savings amounting to not less than £100,000,000 on services provided for in the Estimates. After announcing the exten-

sion of the British wine duty to include stronger cider and perry and the closing of a loophole which enabled evasion of purchase tax on shooting brakes, the Chancellor said he wanted not merely to maintain the surplus but to increase it, and he was sure that part of the additional revenue which he needed could best be obtained from the tobacco duty, which he proposed to raise by 3s. a lb., involving an additional *ad.* on a packet of 20 cigarettes. It was estimated that this would bring in £27,000,000 in the present year and £28,000,000 in a full year. He had also decided to increase the rate of tax on distributed profits by 2½ per cent. and that on undistributed profits by ½ per cent., bringing the rates to 30 per cent. and 3 per cent. respectively. The yield next year would be £30,000,000. His last proposal was an increase in the family allowance scale for the third and subsequent children at the rate of 2s. a week, which would cost £10,000,000 in a full year. As a result of the various alterations £15,000,000 would be added to the estimated surplus, making it £460,000,000, in addition to the reduction of Government expenditure. "This is a Savings Budget", the Chancellor concluded, "and the savings will together make a foundation upon which we can take up without danger the task of increasing investment for the future. The rate of our progress during recent years makes it necessary to slacken the pace a little. But the great forward march goes on". Mr. Gaitskell briefly referred to "this very uninspiring Budget," but the main Opposition criticism was postponed until the following day, when Mr. Harold Wilson opened the attack, which was mainly directed against the introduction of premium bonds. Britain's strength, freedom and solvency, he declared, apparently depended on the proceeds of a squalid raffle. Thousands of people would be outraged by the proposal and he suggested that the Chancellor should take it out of his financial proposals. The Opposition also condemned the decision to end the bread subsidy and considered that the Government's treatment of old age pensioners remained shabby. The general debate ended on April 23 and was wound up by Mr. Macmillan, who did not complain about criticism put forward sincerely from conscientious motives against the premium bonds but said he found the attitude of the official Opposition rather distasteful pointing out that it was a Labour Budget which made the State a partner in football pools. The Government felt that there was all the difference in the world between a system of gambling where the punter lost his stake unless he won and a system of saving where the saver's money was held absolutely safe and the element of chance confined to the prizes. The resolution raising the duty of tobacco was carried by 298 to 217 on April 25, when the remaining resolutions were agreed to and the Finance Bill was given a first reading. The Bill was read a second time without a division on May 9. Explaining one of the clauses, Mr. Henry Brooke, Financial Secretary to the Treasury, said that it dealt with the taxation of the entertainment profession and was designed to protect the revenue by assessing professional entertainers in specified tax offices. The plan would help in getting the claims of this class of taxpayer dealt with more expeditiously, expertly and uniformly. Another clause provided that a person who did his work wholly abroad would be liable to tax on that part of his earnings which he remitted to the United Kingdom in any year in which he was resident here for tax purposes, but would not be liable to tax in any year in which he was not so resident. Mr. Harold Wilson said the Opposition were driven to the conclusion that the Chancellor was not relying on

the Budget, but on the monetary weapon. In Committee on June 5, an amendment to grant to old age pensioners relief from the increase in the tobacco duty was negatived by 260 to 205, Mr. Macmillan saying that the whole system of tobacco tokens was unsatisfactory and hard to administer, and hinting that the method ought to be reconsidered. The clause imposing the increase was carried by 255 to 199.

CAPITAL PUNISHMENT.—On Feb. 16, a debate took place on a Government motion "that this House is of opinion that, while the death penalty should be retained, the law relating to the crime of murder should be amended," to which Mr. Chuter Ede, the former Labour Home Secretary, moved the following amendment: "That this House believes that the death penalty for murder no longer accords with the needs or the true interests of a civilized society, and calls upon H.M. Government to introduce forthwith legislation for its abolition or for its suspension for an experimental period." On a free vote, Mr. Ede's amendment was carried by 293 to 262, and the motion, as amended, by 292 votes to 246. On Feb. 23 the Prime Minister announced that the Government did not consider it appropriate to bring forward a measure against which they had advised the House, but would find time for a second reading of the Death Penalty (Abolition) Bill, a private member's Bill sponsored by Mr. S. S. Silverman. On March 12 this Bill was read a second time after a motion for its rejection had been defeated by 286 to 262, again on a free vote. During the committee stage a number of amendments intended to limit the scope of the Bill were defeated or withdrawn, but one amendment, moved by Sir Hugh Lucas-Tooth with the intention of retaining the death penalty for a murder committed by a person already serving a sentence of life imprisonment, was carried by 198 to 194. The committee stage was concluded on May 29, when an amendment excluding Northern Ireland from the provisions of the Bill was agreed to. On the report stage the decision on Sir Hugh Lucas-Tooth's amendment was reversed and the Bill received its third reading on June 28 by 152 to 133. In the House of Lords, however, after a two-day debate, the Bill was, on July 10, refused a second reading by 238 to 95, Lord Salisbury forecasting the possibility that the Government might introduce a Bill in the following Session to amend the law of murder while retaining the death penalty.

RESTRICTIVE TRADE PRACTICES.—A major item of legislation during the Session was the Restrictive Trade Practices Act, which received the Royal Assent on Aug. 2. The Bill, as introduced in the House of Commons, provided for public registration of restrictive trade practices under an independent registrar empowered to take proceedings in a new Restrictive Practices Court, which would consist of three High Court judges, one judge of the Court of Session, one judge of the Supreme Court of Northern Ireland, and not more than nine (later amended to ten) lay members. The court would have the same status and powers as the High Court. Further provisions included the prohibition of collective enforcement of resale price maintenance and the formation of a smaller Monopolies Commission, to deal with matters inappropriate for reference to the new court. Mr. Peter Thorneycroft, in moving the second reading on March 6, emphasized that the onus of showing that a practice did not operate unreasonably to the detriment of the public would rest with the industry which sought to impose it. He said that it was intended that price rings should be among the first

matters to be considered. Opposition speakers criticized the Bill as failing to provide effective protection for the consumer, but the Opposition amendment was defeated by 319 to 252. The committee stage was concluded, after a large number of sittings, on May 17. Amendments moved by the Minister on re-committal on June 13, and agreed to, included one which empowered the Lord Chancellor, subject to an affirmative resolution of Parliament, to increase the number of judges to be nominated as members of the new Court, and another which excepted, *inter alia*, sole agency agreements from registration. The Bill was read a third time on the following day. The House of Lords inserted a new clause, moved by Lord Mancroft for the Government, providing that the part of the Bill dealing with resale price maintenance should come into operation within three months of the passing of the Bill. This, with some other Lords' amendments, was agreed to in the House of Commons on July 30.

ROAD TRAFFIC ACT.—Consideration of the Road Traffic Bill, originally introduced in the previous Session (see WHITTAKER'S ALMANACK, 1956) was resumed in standing committee in October and November, 1955. The Minister introduced an amendment to authorise "spot checks" of motor vehicles for mechanical efficiency and a new clause to permit the Commissioner of Police to carry out experimental traffic schemes in London by means of regulations. A further new clause, which was unopposed, separated the offences of being drunk in charge of a car and of driving or attempting to drive while under the influence of drink, and proposed heavier penalties and automatic disqualification for the latter. The committee sat altogether on 22 occasions, the last being on Feb. 2. The recommitment and report stages were taken on May 30 and 31, when a number of amendments and new clauses were passed. The Government re-introduced the proposal for compulsory testing of cars, Mr. Watkinson saying that it was proposed to restrict the testing to three simple matters—brakes, steering and lights. Mr. George Strauss said that the Opposition took grave exception to cars being tested by private garages except in special and unusual circumstances, but an Opposition amendment to limit the testing to inspectors appointed by the Minister or local authority was defeated by 216 to 171. During the discussions on the Bill, Mr. Watkinson announced that he proposed to lay an order raising the permitted maximum speed limit of heavy goods vehicles from 20 to 30 miles an hour. The House gave the Bill an unopposed third reading on June 1. In the House of Lords a government amendment was passed permitting speed limits of 40 miles an hour on some classified roads outside London for an experimental period of four years. The Lords gave the Bill a third reading on July 23, and after the Lords' amendments had secured the agreement of the Commons on July 30, the first Road Traffic Bill since 1934 received the Royal Assent on Aug. 2.

SMALL LOTTERIES.—A private member's Bill which finally reached the Statute Book was the Small Lotteries and Gaming Bill, introduced by Mr. Ernest Davies, the Labour M.P. for Enfield East, with the support of members from both sides of the House. The Bill proposed to legalise lotteries conducted by religious organizations, sports clubs and supporters' clubs, provided that the prize exceeded £100, that no ticket was sold for more than one shilling, and that not more than 10,000 tickets were sold. Further provisions were that the lottery should be advertised, and tickets sent through the post, to members only. Small

card or gaming parties with restricted admission fees and prizes would also be legal. The Bill was read a second time on Nov. 25, 1955, and the Government undertook to find time for subsequent stages. On report, an amendment was agreed to increasing from 7½ per cent. to 10 per cent. the amount of the proceeds which might be allocated to expenses. When the second reading debate took place in the House of Lords on April 26, the Bill was opposed by Lord Ammon, Lord Douglas of Barloch and the Archbishop of Canterbury, who took occasion to criticise the Chancellor of the Exchequer's proposal to issue premium bonds. The Lords, however, gave the Bill a second reading by 47 to 42. In committee the prohibition on children under sixteen selling lottery tickets, already made in the Bill, was extended to make it also illegal for them to buy tickets. The Bill was read a third time on May 17 and received the Royal Assent on July 5.

TEACHERS' SUPERANNUATION.—A new Teachers' (Superannuation) Bill was introduced in the House of Commons in Nov. 1955, in place of the Bill which had been withdrawn during the previous Parliament. It was designed to put the Teachers' Superannuation Account on a sound financial basis, and proposed the raising of the superannuation contribution payable by teachers from 5 to 6 per cent., with a similar increase in the amount payable by employers. The Bill, like its predecessor, aroused strong opposition, but the House gave it a second reading by 299 to 249 on Dec. 6. While the Bill was in standing committee, Sir David Eccles announced, on Jan. 31, that its effective date would be postponed from April 1 to Oct. 1, so that the increase in teachers' contributions would come into effect at the same time as their new salary scales. The Bill subsequently passed through all its stages, and received the Royal Assent on July 5.

HOUSING SUBSIDIES. Moving the second reading of the Housing Subsidies Bill on Nov. 17, 1955, Mr. Duncan Sandys said that it was the Government's intention, within a year or so, to abolish

altogether the basic subsidy on houses built for general needs. The present Bill was a first step towards abolition. It proposed to reduce the basic subsidy from £22 15. to £10, with corresponding reductions in the subsidies for flats, while retaining the present rate on flats or houses built for slum clearance, and increasing it to £24 in the case of new towns or town expansion schemes to deal with overspill of population. In committee, an amendment was accepted enabling local authorities to make contributions from the general rate fund to the housing revenue as they thought fit, but the Bill emerged from the committee and report stages substantially unaltered, and was read a third time on Feb. 15, and by the House of Lords on March 22.

OTHER LEGISLATION.—The Criminal Justice Administration Act, provides, *inter alia*, for the establishment of new courts at Liverpool and Manchester to be known as Crown Courts, and to supersede the existing criminal assizes and quarter sessions. The ordinary work of the new courts will be discharged by full-time Recorders. The Pensions (Increase) Act increased the pensions of about 400,000 retired public servants and members of the forces by between 6 and 10 per cent. to compensate them for the fall in the value of money. The total cost of the proposals was about £11,000,000. The Family Allowances and National Insurance Act provided for the increase from 8s. to 10s. a week for the family allowance for the third and subsequent children and for the raising of the age limit from 16 to 18 in the case of school children and apprentices. The Dentists Act established an independent General Dental Council.

ADJOURNMENT.—On August 2, after debates in both houses on the Suez Canal situation, Parliament adjourned until Oct. 23. On the previous day Mr. Butler had given an undertaking to Mr. Gaitskell that the Government would give serious consideration to any representations which the Opposition might find it necessary to make during the recess for the recall of Parliament at an earlier date. (See Events of the Year.)

NEW MEMBERS

Sixty-four candidates were returned at the 1955 Election who had not previously sat in the House of Commons. They were as follows:

CONSERVATIVES AND ASSOCIATES (49):—H. E. Atkins (Merton and Morden); Lord Balmiel (Hertford); J. W. Barter (Ealing, N.); J. C. Bidgood (Bury and Radcliffe); R. F. S. Body (Billericay); P. Bryan (Howden); R. Chichester-Clark (Londonderry); Lt.-Col. J. K. Cordeaux (Nottingham, Central); Capt. F. V. Corfield (Glos., S.); S. K. Cunningham (Antrim, S.); G. B. H. Currie (Down, N.); J. C. G. Dance (Bromsgrove); J. A. Biggs-Davison (Chigwell); Mrs. E. Emmet (East Grinstead); D. K. Freeth (Basingstoke); J. C. George (Glasgow, Pollok); Sir Henry D'Avigdor-Goldsmid, Bt. (Walsall, S.); W. Grant, Q.C. (Glasgow, Woodside); A. Green (Preston, S.); H. E. Gurden (Birmingham, Selly Oak); A. B. C. Harrison (Maldon); J. E. Harvey (Walthamstow, E.); J. M. Howard (Southampton Test); B. G. Irvine (Rye); J. C. Jennings (Burton); Dr. D. M. Johnson (Carlisle); F. W. Farey-Jones (Watford); D. M. Keegan (Nottingham, S.); J. A. Kershaw (Stroud); P. M. Kirk (Gravesend); G. W. Lagden

(Hornchurch); J. A. Leavey (Heywood and Royton); W. G. Leburn (Kinross and W. Perthshire); Hon. J. L. Lindsay (North Devon); Mrs. P. McLaughlin (Belfast, W.); M. V. Macmillan (Halfax); M. Madden (Hitchin); R. Mathew (Honiton); R. L. Mawby (Totnes); D. L. Spencer-Nairn (Cent. Ayrshire); N. A. Pannell (Liverpool, Kirkdale); H. P. Pott (Devizes); D. E. C. Price (Eastleigh); P. A. G. Rawlinson (Epsom); A. G. F. Rippon (Norwich, S.); A. Tiley (Bradford, W.); Miss J. H. Vickers (Plymouth, Devonport); W. S. L. Whitelaw (Penrith and the Border); W. Yates (The Wrekin); M. H. C. Hughes-Young (Wandsworth, Central).

LABOUR (15):—J. W. Ainsley (N. W. Durham); F. Allau (Salford, E.); T. C. Boyd (Bristol, N.W.); Mrs. J. S. Butler (Wood Green); J. D. Cronin (Loughborough); R. J. Edwards (Bilston); C. A. Oram (East Ham, S.); W. Stones (Consett).

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, e.g. the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salary scales shown in most cases in this section take into account the increases granted during 1956. In certain instances, however, the scale was still under review at the time of going to press and the old figure is given.

ADMIRALTY (See Royal Navy)

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1†

[Trafalgar: 7711]

Dean Bradley House, Horseferry Road, S.W.1.

[Abbey: 9030]

The Ministry of Agriculture, Fisheries and Food was constituted in its present form on April 7, 1955, when the former Ministry of Agriculture and Fisheries and Ministry of Food were combined.

The Department has a broad responsibility for food supplies, both home produced and imported, for food manufacture and food distribution. It is responsible generally for the efficiency of the agricultural, horticultural and fishing industries in England and Wales, and provides technical advice to farmers and horticulturists through the National Agricultural Advisory Service and to landowners through the Agricultural Land Service. The County Agricultural Executive Committees act as the Minister's local agents for many matters.

The Department administers in England and Wales the guarantee to farmers under Part I of the *Agriculture Act, 1947*, involving the operation of a deficiency payments scheme for fatstock, and deficiency payments schemes for the main cereal crops; a support price for eggs is also operated. It is also generally responsible for schemes for milk, potatoes and wool operated through producers' marketing boards.

Other important functions of the Department are: Administration of Part II of the *Agriculture Act, 1947*; administration of schemes to improve the quality of livestock; to control or eradicate plant diseases; to control pests, and to facilitate production on marginal land; responsibility for agricultural education; for research as applied to agriculture, horticulture and fisheries; and for such matters as land drainage; agricultural wages enforcement and labour supply, supply of fertilizers and seeds, and, with other Government Departments, the improvement of rural services such as housing, farm buildings, water supplies and electricity. The Department is also responsible for administering the Acts governing catching and landing of fish, and whaling; administering part of the food and drugs legislation, particularly matters dealing with the composition of food and with labelling and advertising; responsibility for questions concerning slaughterhouses, the inspection of meat, and for legislation bearing on the quality and cleanliness of milk.

The Minister is responsible for the Ordnance Survey and for Kew Gardens.

Minister of Agriculture, Fisheries and Food, THE RT. HON. DERRICK HEATCOAT AMORY, M.P. £5,000

Private Sec., J. H. Perrin.

Assistant Private Sec., P. Parkhouse.

Parliamentary do., Major P. H. B. Wall, M.C., M.P. unpaid.

Land Agent

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W. 1.

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the *Research Act, 1931*, the Committee of the Council is responsible for the organization and development of agricultural research and may, in particular, establish or develop institutions or departments of institutions and make provision for the maintenance of research relating to the advance of agriculture. The Council's finance is, under the 1956 Act, derived from the Agricultural Research Fund into which monies provided by Parliament for the purpose of the Act, and other sums received by the Council, are paid.

Council, The Lord Rothschild, G.M., Sc.D., Ph.D., F.R.S. (Chairman); Prof. S. J. Watson, D.Sc., F.R.S.E. (Deputy Chairman); L. G. Davidson; Prof. H. A. Krebs, M.D., F.R.S.; D. Lowe, C.B.E.; Prof. E. J. Maskell, Ph.D., F.R.S.; Prof. K. Mather, C.B.E., D.Sc., Ph.D., F.R.S.; Prof. P. B. Medawar, D.Sc., F.R.S.; Prof. L. P. Pugh; F. Rayns, C.B.E.; J. N. Ritchie, C.B.; Prof. H. G. Sanders, Ph.D.; W. C. Tame; Sir James Turner, I.L.D.; Prof. J. S. Young, M.C., M.D.; Prof. Sir Solly Zuckerman, C.B., M.D., D.Sc., F.R.S.

Secretary, Sir William Slater, K.B.E., D.Sc.
Deputy Secretary, W. G. Alexander, C.B.E.
Assistant Secretaries, W. Ness; P. A. C. Thorne.
Scientific Assistants to the Secretary, E. E. Cheesman, D.Sc.; R. Scarisbrick, Ph.D.; G. G. Samuel.
Principals, J. F. S. Law; L. S. Porter.
Chief Executive Officer, J. H. Shimwell.
Senior Executive Officers, C. S. Goodwin; T. E. Pearson.

For the Research Institutes under the control of the council, see *Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH**AGRICULTURAL BUREAUX**

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the

various Commonwealth Governments, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth. The Commonwealth Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to

from them.

Chairman, J. E. C. Coventry.

AIR MINISTRY

(see Royal Air Force)

AIR TRANSPORT ADVISORY COUNCIL

3 Dean's Yard, S.W.1

The Council is a statutory body which considers representations from the public regarding the air transport facilities provided by the Airline Corporations and the charges for any such facilities, and questions referred to it by the Minister of Transport and Civil Aviation. It also considers in accordance with terms of reference issued to it by the Minister of Civil Aviation on July 30, 1952, applications from the Airline Corporations and independent air transport companies to operate scheduled air services under the arrangements announced by the Minister on May 27, 1952.

Chairman, The Lord Terrington, K.B.E.
Deputy Chairman (vacant).
Members, Sir John Ure Primrose; J. J. Taylor, O.B.E.; Sir J. Gibson Graham, M.C.
Assessor, W. W. Burkett, C.B.E., M.C.
Secretary, R. F. Prosser, M.C.
Assistant Secretary, E. J. Horrex, M.B.E.

COLLEGE OF ARMS OR HERALDS COLLEGE

Queen Victoria Street, E.C.4

[City: 2762]

The College of Arms is open daily from 10-4 and an Officer of Arms is always in attendance to deal with enquiries by the public. But such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who all specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Hon. Sir George Rothe Bellew, K.C.V.O., F.S.A.

Clareux, Sir John Dunamace Heaton-Armstrong, M.V.O.

Norroy and Ulster, Sir Gerald Woods Wollaston, K.C.B., K.C.V.O., F.S.A.

Six Heralds

York, Aubrey John Toppin, M.V.O., F.S.A.
Richmond (and Registrar), Anthony Richard Wagner, C.V.O., F.S.A.

Windor, Richard Preston Graham-Vivian, M.C. (and Earl Marshal's Secretary).

Somerset, Michael Roger Trappes-Lomax.
Lancaster, John Riddell Bromhead Walker, M.V.O., M.C.

Chester, James Arnold Frere, F.S.A.

Four Pursuivants

Portcullis, The Master of Sinclair, M.V.O.
Rouge Dragon, Robin de la Lanne Mirreles.
Rouge Croix, Walter John George Verco, M.V.O.
Bluemantle (vacant).

COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[Edinburgh: 30137]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also

established by decrees of Lyon Court. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and to Dominion or Colonial petitioners (personal or corporate) of Scottish connection, and issues birthbrieves. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, K.C.V.O., I.L.D., F.S.A.Scot., Advocate £1,200

Three Heralds (£25 each)

Marchmont, Lt.-Col. John William Balfour Paul, D.S.O., F.S.A.Scot.

Rothsay, Lt.-Col. H. A. B. Lawson, F.S.A.Scot.

Albany, Major Charles Ian Fraser of Reelig.

Three Pursuivants (£16 13s. 4d. each)

Carrick James Monteith Grant, W.S.
Unicorn, Iain Moncreiffe of Easter Moncreiffe, Advocate.

Kinlyre, Charles Eliot Jauncey, Advocate.

Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson, £750

Procurator-Fiscal, Malcolm Robertson MacGregor, W.S.

Herald Painter, Miss Nora Gordon.

Master, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

5 Old Palace Yard, S.W.1.

[Whitehall: 39351]

Appointed in May, 1924 "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

BRITISH OVERSEAS AIRWAYS

CORPORATION

B.O.A.C. Headquarters, London Airport,

Hounslow, Middlesex

[Skyport: 5511]

Established in 1939, British Overseas Airways

Corporation acquired on April 1, 1940, the air

transport undertakings of Imperial Airways and

British Airways, which had been at the disposal of

the Secretary of State for Air since the outbreak

of war.

B.O.A.C. is the larger of the two Government

Corporations which are charged with the task of

developing and operating British scheduled air

transport services under the provisions of the Air

Corporations Act, 1949. Its functions are to

operate the Commonwealth and Empire, North

Atlantic, South Atlantic and Far Eastern routes

from the United Kingdom. In June, 1956, the routes, with these routes weekly in each s 736,736 per week.

The Members of the Corporation are appointed by the Minister of Transport and Civil Aviation.

BRITISH TRANSPORT COMMISSION

222 Marylebone Road, N.W.1

[Ambassador: 7711]

The British Transport Commission was established as a public authority under the provisions of the *Transport Act, 1947*. On Jan. 1, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the Railway Executive Committee, the railways and road services formerly controlled by the *London Passenger Transport Board*, and various canal and inland waterway undertakings specified in the Act, were vested in the Commission. The administration and development of these and other transport services was delegated to the public bodies known respectively as the *London Passenger Transport Board*, the *British Road Transport Commission*, the *British Inland Waterways Corporation*, and the *British Transport Canal Corporation*. In accordance with the 1947 Act the Commission acquired road haulage undertakings which in 1946 were engaged in carriage of goods involving routes of 40 miles, or upwards, and necessitating journeys beyond a 25 miles radius from the operating centre. Under the provisions of the *Transport Act, 1953*, however, the Commission was required to dispose of a major part of the property held by it for the purposes of the part of its undertaking carried on through the Road Haulage Executive. The 1953 Act also provided for the re-constitution of the Commission, the abolition of the Railway Executive and the reorganization of the railways. Under an Order of the Ministry of Transport, on and from Oct. 1, 1953, all the functions of the Railways, the Road Haulage, the Docks and Inland Waterways and the Hotels Executives, respectively, were assumed by the Commission.

Chairman, Gen. Sir Brian Robertson, Bt., G.C.B., G.B.E., K.C.M.G., K.C.V.O., D.S.O., M.C.
Deputy Chairman, Sir John Benstead, C.B.E.; *Members*, The Lord Rusholme; J. C. L. Train, C.B.E., M.C.; A. B. Valentine; J. W. Watkins, C.V.O., D.S.O., M.C.; Sir Reginald Wilson, each £5,000.

Part-time Members, H. P. Barker (£500); Sir Ian Bolton, Bt., H.M.L., O.B.E. (£1,000); D. H. Cameron of Lochiel; F. A. Pope, C.I.E. (£500); J. Ryan, C.B.E., M.C. (£500); Sir Harry Methven, K.B.E. (*unpaid*); T. H. Summerson (£500); Sir Cecil Weir, K.C.M.G., K.B.E., M.C. (£500).

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]

Overseas Offices

British Travel Centres: 336 Madison Avenue, New York; 39 South La Salle Street, Chicago 3; 606 South Hill Street, Los Angeles; 90 Adelaide

Street West, Toronto; 6 Place Vendôme, Paris; 22 Neue Mainzerstrasse, Frankfurt/Main; Leidseplein 29, Amsterdam; Norrmalmstorg 1, Stockholm C.

The functions of the Association can be summarized as follows: (a) to increase the number of visitors from overseas and (b) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 19 members, 8 of whom are nominated by the President of the Board of Trade: 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (2), the Welsh Tourist and Holidays Board (2) and the Northern Ireland Tourist Board (2). Four additional members representing the various interests concerned with travel and holidays in the United Kingdom may be appointed. The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Tourist Development Committee and the Holiday Development Committee, whose Chairmen are drawn from the Board. The Tourist Development Committee and Holiday Development Committee draw a proportion of their membership from the Board and the remainder from interested organizations.

Chairman, Sir Arthur Morse, C.B.E.

Deputy Chairman, J. Forbes.

Director-General, J. G. Bridges, O.B.E.

Deputy Director-General, L. J. Lickorish.

HISTORIC BUILDINGS COUNCILS

Established under the *Historic Buildings and Ancient Monuments Act, 1953*, to advise the Minister of Works on the exercise of his powers under the Act to make grants towards the repair or maintenance of buildings of outstanding historic or architectural interest, their contents and adjoining land, and, where necessary, to acquire such buildings or to assist the National Trusts or local authorities to acquire them. Under the Act £350,000 is available in 1956-57 for repair and maintenance grants and £500,000 for five years from the National Land Fund for the acquisition of outstanding buildings.

CHARITY COMMISSION

Ryder Street, St. James's, S.W.2

[Whitehall: 7621]

The Charity Commission was constituted under Act of Parliament in 1853 "for the better Administration of Charitable Trusts" in England and Wales. The powers of the Commissioners over all endowments held for solely educational purposes have now been transferred to the Minister of Education.

Chief Commissioner, F. W. W. McCombe, C.B., C.B.E. £3,250
 Commissioners, R. L. Daniell, £2,250 to £2,600;
 Sir Hugh Linstead, O.B.E., M.P. unpaid
 Secretary and Establishment Officer, M. J. Richards,
 O.B.E., M.C. £2,150
 Asst. Commissioners and Senior Legal Assistants, S.
 P. Grounds; O. H. Toyne; W. E. A. Lewis;
 E. L. Hayes; W. J. Wolfe; J. MacC. Armstrong;
 J. P. L. Redfern; F. H. Pratt. £1,315 to £1,700
 Accountant, Official Trustees' Dept., A. H. Anderton
 £1,260 to £1,510
 Senior Executive Officers, H. O'Neill; A. C. G.
 Carr; A. J. Walker £1,030 to £1,230

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

(Hours 9 to 5)

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of *Queen Anne's Bounty* (established 1704) and the *Ecclesiastical Commissioners* (established 1836). The main function of the Commissioners is the management of assets of the Church in order to endow and augment benefices, &c., and to carry out many administrative duties in relation thereto.

The Commissioners are required to carry all their revenues (including the income of special trusts administered by them) to a general income and expenditure account, the balance of which, after defraying secured charges, continuing grants and the cost of administration, etc., is available for special grants and provisions.

Summary of Income and Expenditure

(For the year to March 31, 1956)

Receipts:
 Estates (net) £2,904,407
 Dividends, interest, etc. 7,658,651
 Trust funds 664,332
 £11,227,390

Expenditure:
 Benefices, dignitaries, Church
 property (including payments
 out of trust funds) and
 administration, etc. £9,893,697
 Balance available for special
 grants and provisions. 1,333,693
 £11,227,390

Constitution.

The 2 Archbishops, the 41 diocesan Bishops, 5 deans, 10 other clerks and 10 laymen appointed by the Church Assembly; 4 laymen nominated by the Queen; 4 persons nominated by the Archbishop of Canterbury; The Lord Chancellor; The Lord President of the Council; the First Lord of the Treasury; The Chancellor of the Exchequer; The Secretary of State for the Home Dept.; The Speaker of the House of Commons; The Lord Chief Justice; The Master of the Rolls; The Attorney-General; The Solicitor-General; The Lord Mayor and two Aldermen of the City of London; The Lord Mayor of York and one

Assistant Directors, E. M. Tibbitt, O.B.E.; R. J. S. Orwin, M.B.E. £2,000

COLONIAL DEVELOPMENT CORPORATION

33 Hill Street, W.1

[Mayfair: 8484]

Established by the Overseas Resources Development Act, 1948, and charged with duties for securing development in Colonial territories with a view to increasing their general productive capacity and trade.

The Corporation is authorized to borrow up to £10,000,000, and operates on commercial principles in close consultation with Colonial Governments in order to ensure that its activities will be conducted in the best way to promote the welfare of Colonial peoples.

Chairman (part-time), Lord Reith, P.C., G.C.V.O., G.B.E., C.B., T.D. £3,500

Deputy Chairman (part-time), Sir Nutcombe Hume, K.B.E., M.C. £750

Members (part-time), Sir Hugh Beaver, K.B.E.; A. Gaitskill, C.M.G.; Sir John Hathorn Hall, G.C.M.G., O.B.E., D.S.O., M.C.; Lord Macdonald of Gwaenysgor, P.C., K.C.M.G.; G. Tyser each £500

COLONIAL INCOME TAX OFFICE

26 Grosvenor Gardens, S.W.1

The Official Representative is appointed by the Secretary of State for the Colonies and acts in respect of those Colonies, Protectorates, etc., which have decided to avail themselves of his services in connexion with Colonial Income Tax and Excess Profits Tax.

Official Representative, W. Williams £2,100

Deputy, H. G. Ward £1,875

COMMONWEALTH ECONOMIC COMMITTEE

a Queen Anne's Gate Buildings, S.W.1

[Whitehall: 5586]

Chairman, W. A. Horrocks (South Africa).

Secretary, G. S. Dunnett, C.M.G., O.B.E.

COMMONWEALTH RELATIONS OFFICE

Downing Street, S.W.1

[Whitehall: 2323]

In July, 1925, a new Secretaryship of State for Dominion Affairs was created, and as a result the Dominion Office was established to take over from the Colonial Office the business connected with the self-governing Dependencies, the self-governing Colony of Southern Rhodesia and the South African territories (Basutoland, Bechuanaland Protectorate and Swaziland) and business relating to the Imperial Conference.

In July, 1947, the titles of the Secretary of State for Dominion Affairs and the Dominions Office were altered to the Secretary of State for Commonwealth Relations and the Commonwealth Relations Office respectively. As from August 15, 1947, the Secretary of State for Commonwealth Relations assumed responsibility for relations with India and Pakistan and as from February 4, 1948, for relations with Ceylon.

On September 3, 1953, the self-governing Colony of Southern Rhodesia became part of the Federation of Rhodesia and Nyasaland, and the Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and the Federation.

Secretary of State for Commonwealth Relations, THE EARL OF HOME, P.C......£5,000

Private Secs., H. Smedley, M.B.E.; Miss J. M. D. Ward.

COMMONWEALTH SHIPPING COMMITTEE

Berkeley Square House, W.1

[Mayfair: 9494, Ext. 2281]

Chairman, Sir Clement W. Jones, C.B.

Secretary, W. H. J. Crees, M.B.E.

COMMONWEALTH TELECOMMUNICATIONS BOARD

28 Pall Mall, S.W.1
[Whitehall: 5511]

On May 31, 1949, the Commonwealth Telecommunications Board was incorporated by Act of Parliament, and superseded the former Commonwealth Communications Council.

Chairman (vacant).

Members, Col. D. McMillan, O.B.E. (United Kingdom); J. H. Tudhope, M.C. (Canada); R. V. McKay (Australia); H. W. Curtis (New Zealand); Lieut.-Col. H. Myers, O.B.E. (South Africa); S. P. Patel (India); E. Bridgman, M.B.E. (Pakistan Observer); Lieut.-Col. V. A. Nicholas, M.B.E. (Ceylon); G. T. Anstey, C.B. (Rhodesia); W. J. Bigg, C.M.G. (Colonies).

Secretary-General, Colonel W. W. Shaw-Zambra, C.V.O., C.B.E., T.D.

CONSERVANCY BOARDS

THAMES CONSERVANCY

2-3 Norfolk Street, Strand, W.C.2

[Temple Bar: 4982]

The Conservation of the River Thames was granted to the delegated to the being reconstituted

Authority, by an Act of 1908, took over, as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington. In 1932 the various Acts relating to the Conservators were repealed and a consolidating Act (The Thames Conservancy Act, 1932) was passed. This Act was amended by the Thames Conservancy Act, 1950, which extended the powers of the Conservators, made further provision for their revenue, and increased the number of Conservators to 38. The Conservators are also the Drainage Board of the Thames Catchment Area.

Chairman, Sir Jocelyn Bray.

Vice-Chairman, Lt.-Col. Sir Humphrey Haslam, O.B.E.

Secretary and Solicitor and Parliamentary Officer, G. E. Walker.

Chief Engineer, H. C. Bowen, O.B.E., T.D.

Treasurer and Accountant, C. T. Bailey.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place

Strand, W.C.2

This Board was established by the *Land Drainage Act, 1930*, as the flood prevention authority for the Lee watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts, 1868-1938*, and the *Rivers (Prevention of Pollution) Act, 1951*) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture, Fisheries and Food, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, E. F. Cooper.

Vice-Chairman, C. W. F. Ridley.

Clerk of the Board, J. L. Spiller, D.F.C.

Engineer, N. Medington.

Treasurer, W. E. Adams.

Protection of Water Officer, F. W. Swain.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Forth of Forth within the limits prescribed in the Order.

Chairman, Capt. Cedric A. Salvesen, M.C.

Clerk and Treasurer, M. D. Kennedy, W.S., 14 Princes Street, Falkirk.

Engineers, Messrs. Leslie & Reid, C.E., 53 Manor Place, Edinburgh.

Marine Superintendent, Capt. E. Roynon-Jones, R.N.

COTTON BOARD

Royal Exchange 6th Floor, Manchester 2

Established under the Cotton Industry Development Council Order, 1948.

Chairman, Sir Raymond Streat, C.B.E.

Other Independent Members, W. D'Arcy Madden, C.B.E.; Sir Leslie Roberts, C.B.E.

Members representing the Employers, W. T. Winterbottom, C.B.E.; E. Noble; H. Haygarth Jackson, M.C.; A. V. Symons.

Members representing Employees, C. Schofield, C.B.E.; Sir A. Roberts, C.B.E.; L. T. Wright; W. L. Heywood, O.B.E.

Director-General, J. Broatch.

CROWN AGENTS FOR OVERSEA GOVERNMENTS AND ADMINISTRATIONS

4 Millbank, Westminster, S.W.1.

[Abbey: 7730]

(Stock Transfer Office, Lloyds Bank Buildings, Moorgate, E.C.2.)

COMMISSIONERS OF CROWN LANDS

55 Whitehall, S.W.1
[Trafalgar: 2211]

THE CROWN LANDS.—The Land Revenues of the Crown in *England and Wales* have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1956, the total Receipts by the Commissioners were £2,854,627. The Land Revenue (including interest on loans allowed) was £2,414,391. The total of £2,400,000 was paid to the Exchequer in 1955-56 as *Surplus Revenue*, being a net sum from which no deductions have to be made for administration.

The Land Revenues in *Ireland* have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in *Scotland* were transferred to the Commissioners in 1833.

Commissioners (ex officio). The Minister of Agriculture, Fisheries and Food and the Secretary of State for Scotland *Unpaid*
Commissioner, Sir Malcolm Trustram Eve, Bt., C.B.E., M.C., T.D., Q.C.

MINISTRY OF DEFENCE

Storey's Gate, S.W.1

[Whitehall: 7000]

The Ministry of Defence was formally constituted on January 1, 1947, under the *Ministry of Defence Act, 1946* which provides that the Minister "shall perform the duties of the Ministry of Defence."

These responsibilities are further defined in a White Paper *Central Organization for Defence* (Cmd. 6923) issued in October 1946 as including—

(a) The apportionment, in broad outline, of

government research and development and the correlation of production programmes;

(b) The settlement of questions of general administration on which a common policy for the three Services is desirable;

(c) The administration of inter-Services organizations.

Intelligence Bureau.

To these have since been added responsibilities arising from United Kingdom participation in international defence organizations.

The Minister of Defence is the Deputy Chairman of the Defence Committee of the Cabinet. The Prime Minister is the Chairman.

Minister of Defence. THE RT. HON. SIR WALTER TURNER MONCKTON, K.C.M.G., K.C.V.O., M.C., Q.C., M.P. £5,000

DEVELOPMENT COMMISSION

3 Dean's Yard, Westminster, S.W.1

[Abbey: 1777]

The Development Commission was established and constituted under the *Development and Road Improvements Fund Act, 1909*, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act, 1919*, the *Ministry of Transport Act, 1919* and

the *Fisheries Act, 1955*, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater.

Chairman, The Countess of Albemarle, D.B.E.
Other Commissioners, Lt.-Col. Hon. R. E. Beaumont, T.D.; C. I. C. Bosanquet; I. K. Elmhirst; Prof. Sir James Gray, C.B.E., M.C., Sc.D., LL.D., F.R.S.; J. L. Longland; J. Sullivan, C.B.E.
Secretary, F. S. O. Broughton.....£2,600

NATIONAL DOCK LABOUR BOARD

9-20 Upper Brook St., W.1

The National Dock Labour Board administers the scheme for giving permanent employment to dock workers under the *Dock Workers (Regulation of Employment) Act, 1947*.

Chairman, The Lord Crook.
General Manager and Secretary, M. R. Haddock, O.B.E.
Chief Accountant, H. C. Harper.
Chief Welfare Officer, F. G. Thomas.

THE DUCHY OF CORNWALL

Buckingham Gate, S.W.1

[Victoria: 7346-7]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R. H. The Duke of Cornwall, F.R.S., G.C.B., M.C.; The Earl Waldegrave; Brig. The Lord Tryon, K.C.V.O., D.S.O.; Hon. Charles Russell, Q.C. (*Attorney-General of the Duchy*); Sir John Carew Pole, Bt., D.S.O.; P. G. T. Kingsley, C.V.O. (*Secretary*).

Other Officers of the Duchy of Cornwall

Auditor, Sir Nicholas Waterhouse, K.B.E.
Solicitor, B. B. D. Stopford.
Asst. Secretary, G. H. H. Syms, M.V.O.
Deputy Receiver, R. C. B. Raby, M.V.O.
Sheriff (1956-57), Maj. Simon Edward Bolitho, M.C.

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.4

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The EARL OF SELKIRK, O.B.E., A.F.C.....£5,000
Private Secretary, G. A. Gardner.
Vice-Chancellor, Sir Leonard Stone, O.B.E.

Attorney-General and Attorney and Serjeant within the County Palatine of Lancaster, E. Milner Holland, C.B.E., Q.C.
Receiver-General, Brig. the Lord Tryon, K.C.V.O., D.S.O.
Clerk of Council and Keeper of Records, R. Somerville, C.V.O.
Solicitor, K. R. E. Taylor, C.V.O.
Chief Clerk, E. R. Wheeler, M.B.E.
Registrar, Manchester District, R. A. Forrester.
Do. Liverpool District, W. E. Helsby.
Do. Preston District, W. E. Helsby.

THE COUNTY PALATINE OF DURHAM

Registrar's Chambers, St. Nicholas Court, Market Place, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1280 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I. in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Northam and Islandshire (roughly the northern quarter of Northumber-

measure to exercise its ancient powers on behalf of the Crown.

Chancellor, His Hon. John Charlesworth, LL.D.

Attorney-General, G. R. Hinchliffe, Q.C.

Solicitor-General, G. de P. Veale, Q.C.

Registrar of Chancery Court, Lt.-Col. H. L. Swinburne.

MINISTRY OF EDUCATION

Curzon Street, W.1

[Mayfair: 9400]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration was estimated at £1,181,209 in the financial year 1956 with £1,207,102 for inspection and examination.

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4
[Fleet Street: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons

the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

Comptroller and Auditor General: Sir Frank Newton

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER

17 North Audley Street, W.1

[Mayfair: 7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Scientific Societies Act, the Trustee Savings Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act, the Superannuation and other Trust Funds (Validation) Act and the Prevention of Fraud (Investments) Act. Under the Industrial Assurance Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

MINISTRY OF FUEL AND POWER

Thames House South, Millbank, S.W.1.

[Abbey: 7000]

Set up in June, 1942, when it absorbed the former *Mines and Petroleum Departments* and the functions of the Board of Trade in relation to *Gas and Electricity*, the Ministry of Fuel and Power deals with policy considerations affecting the coal, oil, gas and electricity industries and is responsible for the general administration of the statutes dealing with those industries. While the need for regulation of supplies continues, it controls the distribution of solid fuels.

THE GAS COUNCIL

1 Grosvenor Place, S.W.1
 [Sloane: 4554]

the Gas Act, 1948, and Power on the to assist the Area ir functions. It is id issue of British Sir Harold Smith, K.B.E. (£6,000). Deputy Chairman, Sir Henry Jones, M.B.E. (£5,000). The Members are the Chairmen of the 12 Area Gas Boards.

Area Gas Boards

Twelve Area Gas Boards are established by the Act. The assets and liabilities of former Gas Undertakings vested on May 1, 1949, in these Boards which are responsible for the manufacture and distribution of Gas and for the production of residuals.

Chairmen

Scottish, S. Smith.
Northern, E. Crowther, C.B.E.
North Western, D. P. Welman.
North Eastern, Dr. R. S. Edwards.
East Midlands, R. S. Johnson, M.B.E., T.D.
West Midlands, G. le B. Diamond, C.B.E.
Wales, T. Mervyn Jones.
Eastern, Sir John Stephenson, C.B.E.
North Thames, M. Milne-Watson, C.B.E.
South Eastern, W. K. Hutchison, C.B.E.
Southern, C. H. Leach.
South Western, C. H. Chester, C.B.E....each £4,500

Gas Consultative Councils

Twelve Gas Consultative Councils were set up by the Minister of Fuel and Power, one for the area of each of the Gas Boards to represent the interests of consumers. These Councils deal with specific complaints and consider matters of general interest to the consumer. Under the Act the Area Boards are required to inform the Councils of their general plans and arrangements. Each Council Chairman is an *ex officio* member of his Area Board.

Chairmen

Scottish, Sir Robert Nimmo.
Northern, J. Hoy, M.B.E., B.E.M.
North Western, C. E. P. Stott.
North Eastern, H. Sutcliffe.
East Midlands, A. H. Wood.
West Midlands, J. H. Lewis, O.B.E.
Wales, Sir George Hamer, C.B.E.
Eastern, Lt.-Col. R. I. Musson, M.C.
North Thames, E. Bayliss.
South Eastern, Dame Alix Meynell, D.B.E.
Southern, F. C. Rea, O.B.E.
South Western, Sir Colin Campbell, O.B.E.

GENERAL REGISTER OFFICE

(England and Wales)
 Somerset House, W.C.2
 [Temple Bar: 2407]

The Registration of Births, Marriages and Deaths is believed to have been inaugurated by Thomas Cromwell in 1542, but it was not until 1837 that the General Register Office was established, when a system of civil registration of births, marriages and deaths was introduced in England and Wales. In 1926 provision was made for the registration of still-births, for the

re-registration on the Registrar General's authority of the births of legitimated persons and for the maintenance of a register of adopted children. The Registrar General controls the local registration officers appointed under the consolidating Registration Service Act, 1953, in the execution of their duties, which are set out mainly in two consolidating Acts, the Marriage Act, 1949 and the Births and Deaths Registration Act, 1953. These duties relate to the registration of births,

tion of certain Nonconformist marriages. Central records of births, still-births, marriages and deaths are maintained at Somerset House.

The Registrar General is also responsible for the collection, processing and analysis of statistics relating to population, fertility, births, marriages, deaths and diseases and for the arrangements for the periodical census of population.

Officers

Registrar General, Sir George North, C.B., M.C., LL.D. £3,500
Establishment Officer and Deputy to Registrar General, A. E. Joll (Establishments, Accounts, International and General, Statistics, Census and Publications) £2,000 to £2,600
Assistant Secretary, H. M. Fletcher (Registration, Marriages and Local Services) £2,000 to £2,600
Chief Statistician, B. Benjamin, Ph.D. £2,000 to £2,600

Do. (Medical), W. P. D. Logan, M.D., Ph.D. £2,850

Principals, R. M. Blaikley; L. M. Feery; W. J. Littlewood; W. D. Mathieson, O.B.E., M.C.; G. Rhodes; F. A. Rooke-Matthews £1,375 to £1,950

Statisticians, A. J. Boreham; J. R. L. Schneider; Miss E. M. Brooke; Miss M. P. Newton Men, £1,375 to £1,950; Women, £1,288 to £1,826

Statisticians (Medical), M. A. Heasman; A. McKenzie £1,650 to £2,250

Chief Executive Officers, D. J. Smale; F. T. Stobart, I.S.O. £1,635 to £1,845

Senior Executive Officers, H. G. Corbett; V. M. Harris; I. Hutchinson; J. R. Jeffery; W. A. Rolph; R. P. Thorby, £1,285 to £1,530; Miss C. M. Friday, M.B.E.; Miss A. V. Lock £1,191 to £1,408

Chief Inspector, E. J. Bowman £1,285 to £1,530

THE GOVERNMENT ACTUARY

Caxton House East, Tothill Street, S.W.1

[Abbey: 4234]

Government Actuary, Sir George Maddex, K.B.E. £4,000

Deputy Government Actuary, H. Tetley £2,600

Principal Actuaries, W. S. Hocking, O.B.E.; L. G. K. Starke, C.B.E.; F. Gordon Smith; G. C. Turner £1,700 to £2,200

Actuaries, W. T. C. Blake; C. E. Clarke; P. R. Cox; W. Elrick; Miss I. A. Laurence; W. M. Low; L. V. Martin; J. R. Patterson; W. V. Webb £1,260 to £1,570

THE GOVERNMENT CHEMIST

(Government Laboratory)

13 Clements Inn Passage, Strand, W.C.2

[Chancery: 6331]

In 1842 a laboratory was established by the Board of Excise (later the Board of Inland Revenue) for the purpose of checking the adulteration of

tobacco and subsequently for the examination of all excisable commodities. In 1875 the Board of Customs formed a laboratory for duties connected with its responsibilities under the *Food and Drugs Act* and in the assessment of revenue on imported materials. These two laboratories were amalgamated in 1894 as the Government Laboratory, the facilities of which were then made available to other Departments for advice and assistance on chemical matters. In order to promote the centralization, as far as possible, of all Government Chemical work and to place all Departments on the same footing as regards its services, the Laboratory was constituted as a separate Department in 1911 under the Government Chemist.

Besides having statutory functions under the *Food and Drugs Act* and the *Fertilisers and Feeding Stuffs Act*, the Department carries out analytical, advisory and investigatory chemical work for most other Government Departments.

Government Chemist, G. M. Bennett, C.B., Sc.D., F.R.S. £2,600

Deputy Government Chemist, E. H. Nurse £2,050 to £2,225

Senior Principal Scientific Officers, J. King, O.B.E.; S. A. Ashmore; B. A. Ellis; J. Longwell £1,700 to £1,950

Principal Scientific Officers, P. M. Mooney; J. F. Hirst; C. O. Harvey; R. H. Settle; P. McGregor; B. E. Dixon; J. Fraser; E. H. Warren; J. L. Buchan; J. W. A. Woodley; H. L. Bolton; J. C. G. Daubney; H. G. Smith; P. J. Hardwick; A. W. Russell; J. G. N. Gaskin; E. Q. Laws; C. R. Hoskins; R. A. Jones; E. G. Kellett; G. W. G. MacLennan; E. I. Johnson; J. A. C. McClelland; W. F. Waters; G. A. Sergeant; D. J. Coomber; R. J. Savage £1,150 to £1,570

Senior Executive Officer, R. E. Findlay £1,030 to £1,230

↑ On loan to another Department.

GOVERNMENT HOSPITALITY FUND

The Treasury, Whitehall, S.W.1

[Whitehall 1481]

Instituted in 1908 for the purpose of organizing official hospitality on a regular basis, with a view to the promotion of international goodwill.

Minister in Charge, RT. HON. P. G. T. BUCHAN-HEPBURN, M.P.

Secretary, Sir Graham Vincent, K.C.M.G., C.B., C.V.O. £2,500

MINISTRY OF HEALTH

Savile Row, W.1

[Regent: 8411]

The Ministry of Health was established by the *Ministry of Health Act*, 1919, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the 'National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare

NATIONAL HEALTH SERVICE

(For main article, see Index)

Regional Hospital Boards

England and Wales are divided into 14 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

34 Chester Terrace, Regent's Park, N.W.1.

[Weibek: 7711]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and prepare inventories of the ancient and every building, earthwork or other monument on up to the year 1714. The first list of monuments was published in 1909. The Commission has published up to present date inventories covering nine counties. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, they have no power to implement their recommendations.

Chairman, The Earl of Ilchester, G.B.E., F.S.A.
Commissioners, Miss Rose Graham, C.B.E., D.Litt., F.S.A.; Sir Mortimer Wheeler, C.I.E., M.C., D.Litt., F.B.A.; Pres.S.A.; Sir Cyril Fox, D.Litt., Ph.D., F.B.A.; F.S.A.; Walter Godfrey, C.B.E., F.R.I.B.A., F.S.A.; H. S. London, F.S.A.; Sir Albert Richardson, K.C.V.O., P.R.A., Litt.D., F.S.A., F.R.I.B.A.; Professor I. A. C. Dickinson, M.C., I.D.; G. P. H. Watson, M.B.E., F.R.I.B.A., R.S.W.; Mrs. A. I. Dunlop, O.B.E., Ph.D., D.Litt., I.D.
Secretary, A. Graham, F.S.A. £1,600

HOME OFFICE

Whitehall, S.W. 1
 [Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Government and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of

children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, byelaws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonials and formal business connected with honours.

CENTRAL OFFICE OF INFORMATION

Norgeby House, 83 Baker Street, W.1

[Welbeck: 4420]

The Central Office of Information came into being on April 1, 1946, as a non-Ministerial Department with a separate vote; it operates in England and Wales, the regional work in Scotland being undertaken by the Scottish Home Department, and in Northern Ireland by the Government of Northern Ireland. The Department performs common technical and production functions, and gives specialized assistance and advice to other departments, for both home and overseas publicity purposes. Some of its principal functions are: (a) To act as the central Government agency for the preparation of publicity material required by departments, such as films, press and poster advertising, photographs, books, pamphlets and

magazines and exhibitions; to maintain liaison with departments on their publicity requirements; and to provide technical advice and assistance, both at home and overseas. (b) To undertake publicity as required on home matters of inter-departmental scope. (c) To provide a daily service of comment and background information for the use of press officers and other British representatives overseas. (d) To provide a regional publicity organization in this country for the use of departments requiring such services. (e) To provide the machinery in this country for the central issue of Government news.

Director-General, T. Fife Clark, C.B.E. £4,250
Private Secretary, Miss E. M. Butler, M.B.E.

BOARD OF INLAND REVENUE

Somerset House, W.C.2

[Temple Bar: 2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, estate duty, stamp duties and other direct taxes, and also for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. Salaries and expenses of the Board for 1956/57 are estimated at £38,014,000.

The Board

Chairman, Sir Henry D. Hancock, K.C.B., K.B.E., C.M.G.£6,000

Private Secretary, W. D. Pattinson.

Deputy Chairmen, Sir Edward H. Ritson, K.B.E., C.B.; J. H. Evans, C.B.£4,250

Private Secretary, F. I. Robertson.

Other Members, E. R. Brookes, C.B.; W. W. Morton; R. O. M. Nicholas, C.B.; J. R. McK. Willis, C.B., C.M.G.

Secretaries' Office

Secretaries, E. R. Brookes, C.B.; W. W. Morton; R. O. M. Nicholas, C.B.; J. R. McK. Willis, C.B., C.M.G.£3,250

MINISTRY OF LABOUR AND NATIONAL SERVICE

8 St. James's Square, S.W.1
[Whitehall: 6200]

The office of Minister of Labour was created by the *New Ministries and Secretaries Act, 1916*, which provided for the transfer to the Ministry of Labour of certain of the duties of the Board of Trade. Under the *Minister of National Service Order, 1939*, the title of the Ministry was changed to the Ministry of Labour and National Service and the offices of Minister of Labour and National Service are held by the same Minister. The principal functions of the Ministry of Labour and National Service are: (1) Administration of the *Employment and Training Act, 1948*, and provision of facilities and services for the purposes of assisting persons to select, fit themselves for, obtain and retain employment suitable to their age and capacity, of assisting employers to obtain suitable employees, and generally for the purpose of promoting employment in accordance with the requirements of the community, including the operation of, (a) a national system of Employment Exchanges; (b) the Technical and Scientific Register and Nursing Appointments Offices; and (c) Government schemes for vocational training and industrial rehabilitation. (2) Central administration through the Central Youth Employment Executive of a comprehensive Youth Employment Service, which may be provided locally either by the local education authority under a scheme approved by the Minister or the Ministry's local office. (3) Collection and publication of information and statistics relating to manpower, employment and unemployment.

partments on matters of general employment policy including the distribution of industry and the maintenance of a high and stable level of employment. (5) Registration, medical examination and calling-up of men under the *National Service Acts*; deferment and postponement of call-up; reinstatement in civil employment. (6) Resettlement in civil employment of men called up under the *National Service Acts* or released from service in the Regular Forces. (7) Administration of the *Disabled Persons (Employment) Act, 1944* to enable disabled persons to secure employment, including provision where necessary of courses of industrial rehabilitation and vocational training. (8) Administration and enforcement of the *Factories Acts 1937 and 1948*, and the *Employment of Women and Young Persons Act, 1936* and dealing generally with questions concerning the safety, health and welfare of workpeople in factories and certain other premises. (9) Administration of the *Anthrax Prevention Act, 1919* and of the Government Wool Disinfecting Station at Liverpool. (10) Generally dealing with industrial relations, i.e. questions affecting relations between employers and employed, in particular with: (a) assistance in the prevention or settlement of industrial disputes, including the administration of the *Conciliation Act, 1866*; (b) encouragement of good personnel management and of arrangements for joint consultation in industry. (11) Employment of foreign workers in Great Britain. (12) Dealing with labour policy in the international field, including relations with the International Labour Organization, and with over-

seas questions concerning labour and employment. (13) Agency work for other Government Departments in connexion with National Insurance, National Assistance, repayment of income tax to unemployed persons and the issue of passports.

The gross amount for the services administered by the Ministry (Parliamentary Vote, Class VI. 8) was estimated at £23,873,500 for the year ending March 31, 1957, reduced by Appropriations in Aid to a net sum of £20,783,000. The gross estimate is made up as follows: Salaries, £14,937,000 for Headquarters Departments and Outstations: £380,000 for travelling, etc.; expenses: £174,000 for telegraph and telephone services; £172,700 for incidental administrative expenses; £68,800 for Adjudication, Advisory Services, etc.; £6,678,500 for Employment, Training and Rehabilitation, including £3,531,500 for special facilities for seriously disabled persons; £690,000 for expenses in connexion with National Service; £80,000 for repayment of loan charges in respect of Employment Schemes; £258,500 in connexion with the International Labour Organization, including a subscription to the Organization of £245,000; and £34,000 for other services. The appropriations in aid amounting to £3,090,500 include estimated repayments of some £2,500,000 for agency services.

The Central Land Board was appointed on November 11, 1947, under the *Town and Country Planning Act, 1947*, 10 & 11 Geo. 6, ch. 51, and the

corresponding Scottish Act, 10 & 11 Geo. 6, ch. 53. The functions of the Board in relation to the financial provisions of the Acts have been radically altered by the *Town and Country Planning Acts, 1953 and 1954*. The membership of the Commission and of the Board is identical and there is a common staff for both bodies.

Chairman (part-time), Sir Thomas W. Phillips, G.B.E., K.C.B.

Deputy Chairman and Secretary, Sir Robert Fraser, K.C.B., K.B.E.

Members, Dame Myra Curtis, D.B.E.; Sir Luke Fawcett, O.B.E.; Sir Basil Gibson, C.B.E.; A. Macdonald, C.B.E.; Sir J. Randall Philip, O.B.E., Q.C.; J. R. Rutherford, C.B.E.

Deputy Commissioners, W. H. Ansell, C.B.E., M.C.; E. G. Bigwood; W. E. A. Bull; P. V. Burnett; G. A. Coombe, M.C.; J. R. Edwards, M.B.E.; A. Hollis; T. C. Howitt, O.B.E., D.S.O.; J. K. Stephens; G. C. Wilson.

Deputy Secretary, H. B. Usher, C.B. £3,250

Assistant Secretaries, H. N. V. Clarke; L. W. N. Homan; G. M. Ratcliff, O.B.E.; H. A. Shaw; A. Thom, I.S.O. (*Establishment and Finance Officer*); A. J. D. Woods, C.B.E. £2,000 to £2,600

Principals, Miss S. D. Clements; H. Jones, O.B.E.; W. A. Kirkpatrick; E. G. Lewis; J. G. C. Richardson (*Scotland*); A. G. Stirling; W. A. Walker. £1,375 to £1,950

Chief Technical Adviser, L. P. Rees, C.B.E. £2,600

H.M. LAND REGISTRY

Lincoln Inn Fields, W.C.2

[Holborn: 3488]

H.M. Land Registry was established in pursuance of a recommendation of a Royal Commission by the Land Registry Act 1862. The aim of the Act was to render dealings with land more simple and

such changes in the system as the experience of a generation had shown to be necessary. The keynote of the system is that the machinery for the purchase and sale of land is assimilated to that for stocks and shares. Absolute titles granted by the Land Registry are guaranteed by the State. Simple forms, analogous to those

registered land. It is open to any County Council or Council of a County Borough to apply to the Privy Council for an order making registration of title compulsory in its area. The Land Registry is administered under the Lord Chancellor by the Chief Land Registrar, who also controls the Land Charges Department under the Land Charges Act, 1925, and the Agricultural Credits Act, 1928 (Sec. 9).

Registration of Title

Chief Land Registrar, Sir George Curtis, C.B. £2,850

Senior Registrar, Miss E. M. Price, C.B.E. £2,200

Registrars, E. D. Wetton; W. E. B. Pryer; T. B. F. Ruoff; T. I. Casswell; D. Johnston. £2,100 to £2,600

Act. Registrar R. S. Hand. S. I. Whiteley; C. C. O. Nutt; Waterer;

Men, £1,500 to £2,000; *Women,* £1,375 to £1,860

Organization Officer, A. J. Sullivan, M.B.E. £1,635 to £1,845

Senior Executive Officers, A. G. L. Brown; E. Gayfer; A. Cooper; E. J. Dalby; P. L. Umfreville; A. J. Jenkins; C. D. Garrett; S. Wallis; G. V. Cumber; B. Lombard; E. H. C. Livemore; P. Gittings; R. T. Adams; K. C. Walpole. £1,030 to £1,230

Chief Superintendent (Plans Branch), E. A. Malby, M.B.E. £1,635 to £1,845

Deputy Chief Superintendent, C. J. Sweeney, M.B.E.; G. H. Ricks; F. H. Parker. £1,285 to £1,530

Chief Assistant (Establishment) and Clerk of Accounts, W. J. Walling, O.B.E. £1,800 to £2,000

Deputy Chief Assistant (Establishment) and Clerk of Accounts, C. C. Woods. £1,285 to £1,530

LAW OFFICER'S DEPARTMENT

Royal Courts of Justice, W.C.2

[Holborn: 7641]

The Law Officers of the Crown for England and Wales (the Attorney-General and the Solicitor-General) represent the Crown in courts of justice, advise Government departments and represent them in court. The Law Officers are assisted by Junior Counsel to the Treasury. The Attorney-General has also certain administrative functions, including supervision of the Director of Public Prosecutions.

Attorney-General, Rt. Hon. Sir Reginald Manningham-Buller, Bt., Q.C., M.P. £10,000

Parliamentary Private Secretary, F. P. Crowder, M.P. £7,000

Solicitor-General, Sir Harry Hylton-Foster, Q.C., M.P. £7,000

Parliamentary Private Secretary, P. J. M. Thomas, M.P. £1,750 to £2,250

Legal Secretary, A. Macdonald. £1,500 to £2,000

Asst. Legal Sec., G. E. Dudham. £1,085 to £1,475

Legal Asst., E. O. Jackson. £1,085 to £1,475

its voluntary basis. In 1897 the Land Transfer Act introduced the principle of compulsory registration, and four Orders in Council under that Act between 1898 and 1902 made the system compulsory on sale in the administrative county of London. By a further Order made in 1925 registration was made compulsory on sale in Eastbourne, under an order made in 1928 in Hastings, in 1936 in the administrative county of Middlesex, in Dec. 1938 in the County Borough of Croydon, in 1952 in the administrative County of Surrey, and in 1954 in the City of Oxford. Registration will become compulsory in the Medway area of Kent and in the County Borough of Leicester in 1957. The Land Registration Act, 1925, consolidated the previous Acts, and made

THE NATIONAL LIBRARY OF WALES

LLYFGENEL GENEOLAETHOL CYMRU

Aberystwyth

Readers' room open on weekdays, 10 a.m. to 5 p.m.; closed on Sundays. Admission by Reader's Ticket.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. One of the six libraries entitled to certain privileges under Copyright Act. Contains approx. 1,500,000 printed books, 30,000 manuscripts, 3,500,000 deeds and documents, and numerous maps, prints and drawings. Specializes in manuscripts and books relating to Wales and the Celtic peoples. Repository for pre-1858 Welsh probate records. Bureau of the Regional Libraries Scheme for Wales and Monmouthshire.

Librarian, Dr. Thomas Parry.
Deputy Librarian, G. Tibbott.

NATIONAL CENTRAL LIBRARY

Malet Place, W.C.1

[Euston: 6262]

Incorporated by Royal Charter and maintained by annual grants from the Treasury, Municipal and County Authorities, University and special libraries, Adult Education bodies, and public Trusts.

The Library is a national centre for the loan of books (other than fiction and students' text-books) to readers in all parts of the British Isles, through their public, university, or other library. It is able to draw on over 21,000,000 books in nearly all the principal British libraries. Special Departments include the Information Department (for the supply of bibliographical information), the Adult Class Department (which lends books to organized classes of adult students), the Bureau of American Bibliography (which contains the chief American bibliographies and catalogues), and the British National Book Centre for the recording of duplicates and "unwanted" books and periodicals and their redistribution to suitable libraries at home and abroad. The Library also maintains an International Lending Service.

Applications to borrow books must be made through the reader's library and not directly to the National Central Library.

Librarian and Secretary to the Trustees, R. H. Hill
Deputy Librarian, S. P. L. Filon.

SCOTTISH CENTRAL LIBRARY

Lawnmarket, Edinburgh, 1

Carries out in Scotland functions similar to those of the National Central Library, i.e. acts as a clearing-house for inter-library lending, and maintains a Union Catalogue and other records of books held by Scottish libraries. Its own stock of 30,000 books is freely available to all. *Applications to borrow books must be made through the reader's library.*

Librarian and Secretary to the Trustees, M. C. Pottinger, D.S.C.

Assistant Librarian, Miss E. M. Swinton.

MEDICAL RESEARCH COUNCIL

38 Old Queen Street, Westminster, S.W.1.

[Whitehall: 4884]

The Council was formerly the Medical Research Committee, established in 1913 under the National Health Insurance Act, but was incorporated under its present title by Royal Charter on April 1, 1920. It is now under the administrative direction of a Committee of the Privy Council, consisting of the Lord President, the Minister of Health (England

and Wales), and the Secretaries of State for Scotland, for Commonwealth Relations, for the Colonies, and for Home Affairs; the Secretary of the Medical Research Council is *ex officio* Secretary to this Committee.

The Council applies moneys voted by Parliament or received from private sources for the furtherance of medical research. Its reports, published by H.M. Stationery Office, are obtainable through any bookseller.

Social Medicine Research Unit. London Hospital, E.1. **Director.** J. N. Morris.

Social Psychiatry Research Unit. Maudsley Hospital, S.E.5. **Hon. Director.** Prof. Aubrey J. Lewis, M.D.

Statistical Research Unit. London School of Hygiene and Tropical Medicine, W.C.1. **Hon. Director.** Prof. A. B. Hill, C.B.E., D.Sc., F.R.S.

Toxicology Research Unit. M.R.C. Laboratories, Woodmansterne Road, Carshalton. **Director.** J. M. Barnes.

Tropical Metabolism Research Unit. University College of the West Indies, Mona, St. Andrew, Jamaica, B.W.1. **Director.** J. C. Waterlow, M.D.

Tuberculosis Research Unit. M.R.C. Laboratories, Hampstead, N.W.3. and at Birmingham and Manchester. **Director.** P. D'Arcy Hart, C.B.E., M.D.

Unit for Research on the Experimental Pathology of the Skin, Dept. of Experimental Pathology, The Medical School, Birmingham. *Hon. Director*, Prof. J. R. Squire, M.D.

Unit for Research on the Molecular Structure of Biological Systems, Cavendish Laboratory, Cambridge. *Hon. Director*, M. F. Perutz, Ph.D., F.R.S.

Wernher Research Unit on Deafness, King's College Hospital Medical School, Denmark Hill, S.E.5. *Director*: T. S. Littler, Ph.D.

Research Groups

Group for Research on Atmospheric Pollution, St. Bartholomew's Hospital, E.C.1. *Director*, P. J. Lawther.

Betatron Research Group, Christie Hospital and Holt Radium Institute, Manchester, 20. *Hon. Director*, J. Ralston Paterson, C.B.E., M.D.

Group for Research on Bilharzia, Winches Farm, St. Albans, Herts. *Director*, J. Newsome.

Group for Research in Chemotherapy, Molteno Institute, University of Cambridge. *Director*, Miss A. Bishop, Sc.D.

Carcinogenic Substances Research Group, University of Exeter. *Hon. Director*, J. W. Cook, D.Sc., F.R.S.

Group for Research on Drug Sensitivity in Tuberculosis, ... *Director*, ... W.12.

Experimental Investigation of Behaviour Research Group, University College, Gower Street, W.C.1. *Hon. Director*, Prof. R. W. Russell, Ph.D.

Group for Research on the General Effects of Radiation, Hammersmith Hospital, Ducane Road, W. 12. *Director*, W. M. Court Brown.

Group for Research in Industrial Psychology, University College, 17 Gordon Square, W.C.1. *Hon. Director* (vacant).

Group for Research on Infantile Malnutrition, Mulago Hospital, Kampala, Uganda. *Director*, R. F. A. Dean, Ph.D.

Group for Research in Occupational Optics, Institute of ... W.C.1. *Director*, ...

Group for Research in ... Diseases, ... W.C.1. *Hon. Director*, ... F.R.S.

Group for Research on the Occupational Aspects of the Ageing, Department of Psychology, University of Liverpool, 7 Abercrombie Square, Liverpool. *Director*, ...

Group for Research in ..., ... *Director*, ...

Prof. G. W. Pickering, M.D.
Virus Research Group, London School of Hygiene, Keppel Street, W.C.1. *Director*, F. K. Sanders, D.Phil.

Group for Research in Ophthalmological Genetics, Royal College of Surgeons, W.C.2. *Hon. Director*, Prof. A. Sorsby.

Trachoma Research Group, Ophthalmic Hospital, Jerusalem, Jordan. *Hon. Director*, Sir Stewart Duke-Elder, K.C.V.O., M.D., D.Sc.

External Staff

S. L. Rowles, D.Phil., Birmingham; G. H. G. Davis; M. V. Stack, Ph.D., Bristol; J. M. N. Boss, Ph.D., A. V. Few, Ph.D., J. I. Harris, Ph.D., Miss A. Heim, Ph.D., H. W. Laser, M.D., Sc.D., F. Sanger, Ph.D., F.R.S., L. F. Smith, Ph.D., F. G. Spear, M.D., Miss M. A. Vince, Miss K. P. Watts, M. Webb, Ph.D., Cambridge; P. Sainsbury, M.D., Chichester; B. M. Shizynski, Ph.D., Edinburgh; C. M. Jones, Farnborough; P. J. R. Burch, Ph.D., Leeds; Miss W. A. F. Webber, Ph.D., Liverpool; P. S. Andrews, I. N. Asheshov, M.D., H. Davson, D.Sc., Miss H. M. Ferres, Miss J. M. Horton, H. E. Huxley, M.B.E., Ph.D., A. B. Kinnier

Wilson, Mrs. S. D. Lawler, M.D., D. J. Lewis, Miss M. E. Mackay, Ph.D., A. McPherson, A. R. Ness, P. S. B. Newling, Miss S. Ridley, Mrs. S. A. Simpson, P. H. Staple, Ph.D., J. S. Tait, Ph.D., Miss J. Wright, D.M., London; N. B. Finter, Northampton; Miss J. Lascelles, D.Phil., R. H. Leach, Miss K. Little, D.Phil., G. C. F. Newton, M.C., D.Phil., D. S. Robinson, Ph.D., Mrs. J. W. Webb, A. Q. Wells, D.M., Oxford; D. A. J. Tyrell, M.D., Sheffield; F. D. Stott, D.Phil., Stoke Mandeville.

Clinical Research Board

(Appointed in consultation with the Ministry of Health and the Department of Health for Scotland.)

Chairman, Prof. Sir Geoffrey Jefferson, C.B.E., F.R.S. *Secretary*, F. J. C. Herrald.

Public Health Laboratory Service

(Administered by the Medical Research Council on behalf of the Ministry of Health.)

Director of Public Health Laboratory Service, G. S. Wilson, M.D.

CENTRAL PUBLIC HEALTH LABORATORY,

LONDON, N.W.9

Director, Lt.-Col. H. J. Bensted, O.B.E., M.C., R.A.M.C. (ret.).

REFERENCE LABORATORIES

(With names of Directors)

Central Enteric Reference Laboratory and Bureau, E. S. Anderson.

Salmonella Reference, Mrs. J. Taylor.

Streptococcus and Staphylococcus Reference, R. E. O. Williams, M.D.

Virus Reference, F. O. MacCallum, M.D.

Dysentery Reference, Mrs. K. P. Carpenter.

Mycological Reference (London School of Hygiene and Tropical Medicine), Mrs. J. Walker, Ph.D.

Veneral Diseases Reference, London Hospital, E.1.

Malaria Reference, Horton Hospital, Epsom, Surrey, Sir Gordon Coveil, C.I.E. (part-time).

SPECIAL LABORATORIES

(With names of Directors)

Epidemiology Research Laboratory, W. C. Cockburn.

Epidemiology Research Unit, Cirencester, R. E. Hope-Simpson.

Food Hygiene, Miss B. E. Hobbs, Ph.D.

National Collection of Type Cultures, S. T. Cowan, M.D.

Standards Laboratory for Serological Reagents, Lt.-Col. H. J. Bensted, O.B.E., M.C., R.A.M.C. (ret.).

CONSTITUENT PUBLIC HEALTH LABORATORIES

(With names of Directors)

Aberystwyth, Miss M. V. N. Sudds.

Bath, P. G. Mann, M.D.

Bedford, W. F. Lane.

Birkenhead, J. M. Ritchie.

Birmingham, B. R. Sandiford, M.D.

Carlisle, D. G. Davies.

Coventry, R. E. Jones.

Dorchester, G. H. Tee.

Edmonton, Miss M. E. M. Thomas.

Epsom, Miss D. M. Stone, M.D.

Exeter, B. Moore.

Guildford, G. T. Cook, M.D.

Hereford, D. R. Christie.

omlinson.

First appointed Feb. 11, 1931. The functions of the Commission are:—(1) To advise generally on

questions relevant to the most effective development of the National Institutions as a whole and on any specific questions which may be referred to them from time to time; (2) to promote co-operation between the National Institutions themselves and between the National and Provincial Institutions; (3) to stimulate the generosity and direct the efforts of those who aspire to become public benefactors.

Chairman, The Earl of Rosse, I.L.D., F.S.A.

Members, The Earl of Ilchester, G.B.E., F.S.A.; Sir Henry Dale, O.M., G.B.E., F.R.S.; G. M. Young, C.B., D.Litt.; The Earl Spencer, T.D., F.S.A.; Sir Charles Darwin, K.B.E. M.C., Sc.D., F.R.S.; Prof. Sir Albert Richardson, K.C.V.O., F.R.A., F.R.I.B.A., F.S.A.; E. C. Gregory; The Lord Kenyon; (one vacancy).

Secretary, Sir Harold Cloughton, C.B.E.

THE BRITISH MUSEUM

Bloomsbury, W.C.1

[Museum: 1555]

Entrance, Montague Place, W.C.1. Open weekdays 10 to 5 and Sundays 2.30 to 6. Closed on Good Friday and Christmas Day. Admission free.

Reading-room open daily to readers, from 9 to 5, and Newspaper Room (at Colindale), from 10 to 4 throughout the year, except Good Friday, Christmas and Boxing Day and Sundays. Closed for cleaning the week beginning with first Monday in May. Long-period tickets of admission for purposes of research and reference which cannot be carried on elsewhere, are granted on written application beforehand to the Director. The applicant should state abode, business or profession and full particulars of purpose, and should send a recommendation from a person of recognized position.

The British Museum may be said to date from 1753, when Parliament granted funds to purchase the collections of Sir Hans Sloane and the Harleian manuscripts, and for their proper housing and maintenance. The building (Montague House) was opened in 1759. The present buildings were erected between 1823 and the present day, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. The administrative expenses were estimated at £462,996 in 1955-56, and were met by a vote under "Education and Broadcasting," Class IV of the Civil Estimates.

STANDING COMMITTEE

The Three Principal Trustees, The Archbishop of Canterbury; The Lord High Chancellor; The Speaker of the House of Commons—*ex officio*; *Appointed by the Sovereign*, The Marquess of Cambridge, G.C.V.O.; *Other Trustees*, Earl of Crawford and Balcarres, K.T., G.B.E.; Earl of Ilchester G.B.E., D.Litt.; Visct. De L'Isle, V.C.; Lord Normand, P.C.; Hon. David Bowes-Lyon; Rt. Hon. J. Chuter Ede, C.B., M.P.; Sir Henry Tizard, G.C.B., A.F.C., F.R.S.; Sir Henry Dale, O.M., G.B.E., F.R.S.; Sir George Clark, D.Litt., F.R.A.; G. M. Young, C.B., Litt.D.; V. M. R. Goodman, C.B., O.B.E., M.C.; Sir James Gray, C.B.E., M.C., F.R.S.; Professor A. V. Hill, C.B., O.B.E., D.Sc., F.R.S.; Professor D. M. S. Watson, F.R.S.; Rev. Canon C. E. Raven, D.D., D.Sc., F.R.A.; T. S. R. Boase, M.C., I.L.D.

OFFICERS

Director and Principal Librarian, Sir Thomas Kendrick, K.C.B. £2,600

Secretary, B. P. C. Bridgewater

Assistant Secretary, P. Brown . . . £1,460 to £1,660
Principal Keeper of Printed Books and Hon. Curator of the King's Music Library, C. B. Oldman, C.B. . . £2,050 to £2,200

Keepers, F. C. Francis; R. A. Wilson

Deputy Keepers, N. F. Sharp; A. H. Chaplin; R. A. Skelton £1,700 to £1,950
Superintendent of Reading Room, N. F. Sharp

Assistant Keepers, *W. A. Smith, O.B.E.; *J. C. W. Horne; *A. H. King; *G. H. Spinney; R. G. Lyde; G. A. F. Scheele; Annie O'Donovan; Margaret S. Scheele; *H. M. Nixon; Audrey C. Brodhurst; *J. L. Wood; G. D. Painter; *H. G. Whitehead; R. Pine-Coffin; E. J. Miller; R. F. L. Bancroft; R. J. Fulford; A. F. Allison; F. J. Hill; G. J. R. Arnold; P. A. H. Brown; D. F. Foxon; Lorna M. Arnold; D. E. Rhodes; Anna E. C. Simoni; L. J. Thomas; T. T. Tuckey-Smith; O. W. Neighbour; Helen M. Wallis; I. R. Willison; A. M. Cain; C. E. N. Childs; P. J. Fairs; P. C. Meade; J. W. Jolliffe; C. D. P. McDonald.

Keeper of Manuscripts and Egerton Librarian, B. Schofield £1,700 to £1,950

Deputy Keepers, T. C. Skeat; H. R. Aldridge; C. E. Wright £1,460 to £1,660

Assistant Keepers, Margery L. Hoyle; *G. R. C. Davis; L. J. Gorton; T. J. Brown; K. W. Grandson; Antonia Grandson; G. I. Bonner; Pamela Willetts; J. P. Hudson.

Keeper of Oriental Printed Books and Manuscripts, J. Levean £1,700 to £1,950

Assistant Keepers, G. M. Meredith-Owens; L. D. Barnett, C.B.; C. Moss; M. Lings; K. B. Gardner.

Keeper of Prints and Drawings, E. F. Croft Murray

Deputy Keeper, P. M. R. Pouncey . . . £1,700 to £1,950

Assistant Keepers, J. A. G. Gere; P. H. Hulton; C. J. White

Keeper of Coins and Medals, J. Walker

Assistant Keepers, *G. K. Jenkins; R. A. G. Carson; R. H. Dooley; J. P. C. Kent

Keeper of Egyptian Antiquities, I. E. S. Edwards

Keeper of Western Asiatic Antiquities, R. D. Barnett

Assistant Keeper, D. J. Wiseman, O.B.E.

Keeper of Greek and Roman Antiquities, D. E. L. Haynes £1,700 to £1,950

Assistant Keepers, R. A. Higgins; P. E. Corbett.

Keeper of British and Medieval Antiquities, R. L. S. Bruce-Mitford £1,700 to £1,950

Assistant Keepers, *J. W. Brailsford; P. E. Lasko; G. H. Tait; D. M. Wilson.

Keeper of Oriental Antiquities, B. Gray

Deputy Keeper, R. S. Jenyns . . . £1,700 to £1,950

Assistant Keepers, W. Watson; D. E. Barrett; R. H. Pinder-Wilson.

Keeper of Ethnography, A. Digby . . £1,700 to £1,950

Deputy Keeper, W. B. Fagg . . . £1,460 to £1,650

Assistant Keepers, B. A. L. Cranstone; Margaret A. Bennet-Clark.

Keeper of Laboratory, H. J. Plenderleith, M.C.

Principal Scientific Officer, A. E. A. Werner

£1,150 to £1,570

* Receives an allowance.

THE BRITISH MUSEUM (NATURAL HISTORY)

Cromwell Road S.W.7

[Kensington: 6323]

Open free on week-days (except Good Friday and Christmas Day) 10 to 6, and on Sundays from 2.30 to 6.

Official Guide-lecturers conduct visitors round some portion of the collections at 3 p.m. daily free of charge on weekdays, and their services are available at other times for special parties (also free of charge) by arrangement with the Director. Students are admitted daily for the special study of the collections, and to make drawings and take photographs of specimens, under special regulations to be obtained from the Director. The Museum issues a large variety of publications, comprising scientific monographs and catalogues, popular guide-books and manuals, instructions for collectors, economic pamphlets, and picture post-cards, both monochrome and in colour.

The Natural History Collections were removed from the British Museum (Bloomsbury) to South Kensington in 1881-85, the new Museum being opened to the public in 1881. The collections comprise all branches of natural history. During the war the Museum was badly damaged and nearly all the exhibition galleries were devastated but apart from the botanical gallery, they have now been re-opened to the public. The Zoological Museum, Tring (Tring: 225), bequeathed by the second Lord Rothschild, has formed part of the British Museum (Natural History) since 1938.

The administrative expenses were estimated at £360,193 in 1956-57.

Director, Sir Gavin de Beer, D.Sc., F.R.S. £3,250

Secretary, T. Wooddisse, L.S.O. £1,375 to £1,950

Senior Principal Scientific Officer (Library), A. C. Townsend £2,000 to £2,300

Senior Experimental Officer, G. W. F. Claxton £1,285 to £1,530

Chief Exhibition Officer, Miss M. R. J. Edwards £1,477 to £1,692

Senior Experimental Officers, S. L. Stammwitz;

A. G. Leutscher £1,285 to £1,530

Keeper of Zoology, H. W. Parker £2,400 to £2,700

Deputy Keepers, F. C. Fraser; M. Burton £2,000 to £2,300

Principal Scientific Officers, Miss I. Gordon; Miss E. Trewavas; J. D. Macdonald; J. P. Harding;

W. J. Rees; N. B. Marshall; W. P. Crowcroft

Men, £1,375 to £1,950; Women, £1,267 to £1,795

Senior Experimental Officers, R. W. Hayman; E. Browning; J. C. Battersby; S. Prudhoe

..... £1,285 to £1,530

Keeper of Entomology, W. E. China £2,000 to £2,300

Deputy Keeper, J. P. Doncaster £2,000 to £2,300

Principal Scientific Officers, W. H. L. Jams; R. B. Brown;

L. L. Perkins; J. B. Britton; H. Oldroyd;

P. L. Mattingly; P. Freeman; J. W. A. F. Balfour-Browne; J. H. A. Yarrow

..... £1,375 to £1,950

Miss T. R. Clay £1,267 to £1,795

Senior Experimental Officers, D. E. Kimmins; R. J. Izzard £1,285 to £1,530

Keeper of Geology, E. J. White £2,000 to £2,300

Deputy Keeper, Miss H. M. Muir-Wood £1,865 to £2,163

Senior Principal Scientific Officers, K. P. Oakley;

L. R. Cox £2,000 to £2,300

Principal Scientific Officers, H. D. Thomas; W. E. Swinton; A. T. Hopwood; L. Bairstow

..... £1,375 to £1,950

Senior Experimental Officers, R. H. Spire; F. M. Wonnacott; H. A. Toombs; C. P. Castell; A. E. Rixon

..... £1,285 to £1,530

Keeper of Mineralogy, G. F. Claringbull £2,000 to £2,300

Senior Principal Scientific Officer, H. M. Hey £2,000 to £2,300

Principal Scientific Officers, J. D. H. Wiseman;

A. A. Moss £1,375 to £1,950

Senior Experimental Officers, S. E. Ellis £1,285 to £1,530; Miss J. M. Sweet £1,168 to £1,378

Keeper of Botany, J. E. Dandy £2,400 to £2,700

Deputy Keeper, A. W. Exell £2,000 to £2,300

Principal Scientific Officers, A. H. G. Alston; R. Ross

..... £1,375 to £1,950

Mrs. F. L. Balfour-Browne £1,267 to £1,795

Senior Experimental Officer, E. B. Bangertor

£1,285 to £1,530

THE LONDON MUSEUM

Kensington Palace, W.8

[Western: 6325]

Lancaster House, St. James's S.W.1

[Whitehall: 2484]

Main collections and offices re-opened at Kensington Palace, July, 1951.

The London Museum was instituted, on the lines of the Carnavalet at Paris, for the conservation of antiquities and other objects associated with the history of London. The Collection was originally housed in Kensington Palace, and was reopened in 1914 at Lancaster House. The Museum was closed during and after the Second World War, when the greater part of Lancaster House was used for conferences. It was granted temporary accommodation at Kensington Palace by King George VI.

Director and Accounting Officer, D. B. Harden, O.B.E., F.S.A. £1,800

Asst. Keepers, M. R. Holmes; B. W. Spencer; J. T. Hayes.

THE SCIENCE MUSEUM

South Kensington, S.W.7

[Kensington: 6371]

Open free on weekdays 10 to 6; Sundays 2.30 to 6. Closed on Good Friday and Christmas Day.

For Science Museum Library, see below.

The Science Museum, which is the National Museum of Science and Industry, was instituted in 1853 under the Science and Art Department as a part of the South Kensington Museum, and opened in 1857. It was added in 1861 the Collections of the Natural Museum. In 1903 the administration of the Science Collections was separated from that of the Natural Museum, which were transferred to the Natural Museum. The Collections in the Science Museum are devoted to the development of science and engineering and related industries.

The seven departments into which the exhibits are grouped are shown below.

The administrative expenses of the Museum and Library were estimated at £215,357 in 1956-57 to be met by a vote under Education.

Director and Secretary, T. C. S. Morrison-Scott, D.S.C. £2,325

Museum Superintendent, K. G. Hill

£1,190 to £1,390

Department of Physics

Keeper, F. A. B. Ward £1,800 to £2,050

Deputy Keeper, D. H. Follett £1,185 to £1,745

Assistant Keeper (First Class), J. A. Chalcott

£1,013 to £1,610

Department of Chemistry and Photography

Keeper, A. Barclay £1,800 to £2,050

Deputy Keeper, S. E. Janson £1,185 to £1,745

Assistant Keepers (First Class), F. Greenaway; W. Winton £1,013 to £1,610

Department of Land and Water Transport and Mining

Keeper, F. Lebeter £1,800 to £2,050

Deputy Keeper, H. P. Spratt £1,185 to £1,745

Assistant Keepers (First Class), G. F. Westcott; C. F. Caunter £1,013 to £1,610

Department of Electrical Engineering and Communications

Keeper, F. St. A. Hartley, C.B.E. £1,800 to £2,050

Deputy Keeper, G. R. M. Garratt £1,185 to £1,745

Assistant Keeper (First Class), Miss M. K. Weston

£919 to £1,488

Education, who includes in the Estimate for his Department an annual grant-in-aid from Parliament to supplement the annual grants to the Institute from Overseas Empire Governments and the annual income from its invested endowment funds.

The management of the Institute is vested in a Board of Governors of which the Viscount Hudson, *K.C.*, is the Chairman and Sir Griffith Williams, *M.P.*, is a member.

The Institute is a member of the Commonwealth of the Commissioners in London of the Commonwealth Governments and of representatives of Colonial, educational, cultural and commercial interests as appointed by the Minister. United Kingdom Government Departments are represented by Assessors.

Exhibition Galleries open weekdays, 10 a.m. to 4.30 p.m.; Sundays, 2.30 p.m. to 6 p.m. Cinema, every afternoon. Admission free. Closed Good Fridays and Christmas Days.

Director, K. G. Bradley, *C.M.G.*..... £1,850
Deputy Director and Chief Education Officer, Mrs. M. Burke..... £1,300
Accountant and Establishment Officer, B. Daly..... £1,030 to £1,230
Curator, Exhibition Galleries, R. V. Hatt..... £1,030 to £1,230

IMPERIAL WAR MUSEUM

Lambeth Road, S.E.1
[Reliance: 2636]

Open free daily (except Good Friday and Christmas Day), 10 a.m.; Sundays, 2 p.m. Closes at 6 p.m.

The Museum was founded by the War Cabinet in March, 1917, and established by Act of Parliament in 1920 as a memorial of the effort and sacrifice made by the men and women of the Empire during the Great War of 1914-1918 and to provide a record and a place for the study of that period. On the outbreak of the Second World War in 1939, the Trustees were authorized to collect exhibits and records of the War of 1939-1945 on similar lines. In 1953 it was decided that the Museum should concern itself with all operations in which British Forces have been, or shall be, engaged since August 1914. The exhibition galleries contain relics, models, weapons, uniforms, badges, and medals and record the achievements of the three fighting services and the war effort and experiences of the home front. There are also picture galleries containing works by prominent British artists who recorded the wars in paintings, drawings, or sculpture. The reference library contains more than 70,000 printed and manuscript works in many languages, dealing with all aspects of the military, social, political and economic history of the wars, and files of the many service journals and other periodicals published during those periods. The Photographic Department contains all the official and many unofficial war photographs, to a total of over 3,000,000 prints. Prints may be purchased and reproductions authorized. The official cinematograph war films are also in the Trustees' custody.

Director, L. R. Bradley, *C.B.E.*..... £1,900
Keeper of Photographs and Deputy Director, A. J. Charge, *M.B.E.*..... £1,013 to £1,610
Keeper of Pictures, W. P. Mayes, *F.S.A. (Scot.)*..... £1,013 to £1,610
Librarian (vacant).

NATIONAL MARITIME MUSEUM

Greenwich, S.E.10
[Greenwich: 4422]

Open weekdays 10 till 6; Sundays 2.30 to 6. Closed on Good Friday, Christmas Eve and Christmas Day. Admission free. The Octagon Room at the Royal Observatory now forms part of the Museum and is open at the same times.

Reading Room and Students' Section of the Print Room open on weekdays 10 to 5 (Saturdays, 12.30); tickets of admission on written application to the Director.

The National Maritime Museum was established by Act of Parliament on July 24, 1934, for the illustration of the maritime history, archaeology and art of Great Britain. The Museum, which has absorbed the Royal Naval Museum and the Painted Hall Collections, is accommodated in the Queen's House (built by Inigo Jones, 1616-35) and the Caird Galleries (converted at the expense of Sir James Caird, *Bt.*). The collections include paintings; ship models; ships' lines; prints and drawings; navigational instruments. The amount for the Grant-in-Aid was estimated at £51,379 in 1956-57.

Director and Accounting Officer, Frank G. G. Carr, *C.B.E.*..... £1,650 to £2,025
Deputy Director, Cmdr. W. E. May, *R.N.*..... £995 to £1,530
Assistant Keepers (First Class), G. P. B. Naish; M. S. Robinson; J. Munday £895 to £1,430
Establishment Officer, R. Lowen, *M.B.E.*..... £930 to £1,195

THE NATIONAL MUSEUM OF WALES

AMGUEDDFA GENEDLAETHOL CYMRU
Cardiff

Open free on weekdays, 10 a.m. to 5 p.m. (on Thursdays in Summer to 8 p.m.). Sundays (admission 6d.) 2.30 to 5 p.m.

Founded by Royal Charter, 1907, and maintained by Annual Grant from the Government and Museum rate from the Cardiff City Council. The collections consist of:—(Geology), Relief Maps of Wales, "David Davies" collection of fossil plants, "Griffith J. Williams" collection of minerals, and extensive collections relating to geology in Wales. Botany, the Welsh National Herbarium illustrating the flora of Wales, and collection of plants, including the natural and forest botany (Zoology). Collections of skins, British mammals and birds, eggs of British birds, extensive entomological collection of insects of interest, and a collection of human and animal bones. The collections are maintained by Richard Wilson, *R.A.*, Augustus John, *O.M.*, and Sir Frank Brangwyn, *R.A.*, are well represented; the Gwen-doline Davies Bequest of works of the 19th-century French School, the British School and Old Masters; Pyke-Thompson collection of water-colour drawings and a general collection of paintings in oil; sculpture, including many works by Sir W. Goscombe John, *R.A.*, Swansea and Nantgarw porcelain, the De Winton collection of Continental porcelain, and the Jackson collection of silver, etc.

President, The Lord Kenyon.
Vice-President, The Lord Raglan, *F.S.A.*
Director, Dr. D. Dilwyn John, *T.D.*
Secretary, R. J. H. Lloyd, *T.D.*
Keepers (Geology), Dr. F. J. North, *O.B.E.*; (Botany), H. A. Hyde; (Zoology), Colin Matheson (Archaeology), Dr. H. N. Savory, *F.S.A.*; (Art) R. L. Charles, *M.C.*

Welsh Folk Museum

Amgueddfa Werin Cymru
St. Fagans

The museum is situated 4 miles west of Cardiff. Open weekdays (except Monday) 11 a.m. to 7 p.m. April to September, and 11 a.m. to 5 p.m. October to March (admission 1s.). Open Sundays from 2.30 p.m. The museum was made possible by the gift of St. Fagans Castle and its grounds

Chief Medical Officer, Dr. J. M. Rogan.
Chairmen of Divisional Boards, R. W. Parker
(Scottish Division); L. Graham (Northern (North-
umberland and Cumberland)); E. H. D. Skinner

NATIONAL PARKS COMMISSION

3 Chester Gate, Regent's Park, N.W.1
 [Welbeck: 0366]

The National Parks Commission, a body corporate, was established under the National Parks and Access to the Countryside Act, 1949. Members are appointed by the Minister of Housing and Local Government, to whom the Commission reports annually. This report is laid before each House of Parliament.

The Commission is entrusted with the task of designating National Parks and areas of outstanding natural beauty. The former are extensive tracts of country affording facilities for open-air recreation. The Parks, when approved by the Minister of Housing and Local Government, are administered by Local Planning Authorities, subject to a general supervision by the Parks Commission. The Commission is also required to report to the Minister of Housing and Local Government on long-distance routes, on which there will be continuous right of way for walkers and riders, e.g. the Pennine Way, to make representations to Ministers or Local Planning Authorities on any proposed development likely to be prejudicial to the natural beauty of any area, and to provide information services for the public.

Chairman, The Lord Strang, G.C.B., G.C.M.G., M.B.E.
£2,000

Deputy Chairman, The Lord Lawson, P.C., D.C.L.
£1,000

Members, Brig. P. B. E. Acland, O.B.E., M.C., T.D.;
Mrs. Nancy G. Davies; Mrs. John Dower, O.B.E.;
H. J. G. Griffin, C.B.E.; G. Huxley, C.M.G., M.C.;
A. Lubbock; D. F. Morgan, O.B.E.; Prof. P. W.
Richards, sc.d.; F. Ritchie; W. H. Vaughan,
O.B.E.; H. Wardale; W. B. Yapp. unpaid
Principals, J. R. B. Ferguson; J. Locke

Field Officer, L. J. Watson. £1,150 to £1,570
Senior Executive Officer, E. J. S. Burbridge
£1,030 to £1,230

NATIONAL RESEARCH DEVELOPMENT CORPORATION

1 Tilney Street, W.1

[Grosvenor: 5431]

The National Research Development Corporation is a Public Corporation set up by the Board of Trade under the provisions of the Development of Inventions Act, 1948, mainly to exploit or develop in the public interest inventions resulting from research carried out by Government Departments or other public bodies, or any other research in respect of which financial assistance has been provided out of public funds.

Chairman, Sir Alan Saunders, O.B.E. unpaid
Managing Director, The Earl of Halsbury. £5,000

THE NATURE CONSERVANCY

19, Belgrave Square, S.W.2.

[Belgravia: 3241]

The Nature Conservancy was set up by Royal Charter in March, 1949, and is directly responsible to the Lord President of the Council as Chairman of the Privy Council Committee for Nature Conservation. The National Parks and Access to the Countryside Act, 1949, provided the necessary powers for the proper discharge of the responsibilities laid on the Conservancy.

The duties laid upon the Conservancy by the Royal Charter and the 1949 Act are—the provision of advice; the practice of conservation; and the stimulation and conduct of research. All three functions are intimately connected: advice and practice seek to apply the results of research in a field that is still largely unexplored; research aims at a better understanding of the general behaviour of natural and semi-natural communities of plants and animals; and this entails the acquisition and full control of a representative series of Reserves, as well as the establishment of laboratories.

In Great Britain forty-three Nature Reserves, covering some 81,683 acres, had been declared up to July 31, 1956. The Conservancy has powers under Part III of the National Parks and Access to the Countryside Act, 1949, to make byelaws for the protection of National Nature Reserves.

Research Stations have been set up at Merlewood, Grange-over-Sands, and Furzebrook, Warcham, and Field Stations at Moor House, Westmorland, and Anancaun, Ross-shire, where long-term ecological research is undertaken into such problems as the relation of vegetation to soils and climates, peat growth, effects of grazing and of moor burning, the spread of myxomatosis, coastal erosion and roadside spraying. Grants are made for research and the Conservancy awards a number of post-graduate studentships annually.

Reports and publications are issued through H.M. Stationery Office and are obtainable from any bookseller or from the above address.

*Chairman, Arthur Bryce Duncan.**

Members, Prof. A. R. Clapham, ph.D.; Dr. F.
Fraser Darling, F.R.S.; The Lord de Ramsey,*

South-East Region, 19 Belgrave Square, S.W.1.

ROYAL OBSERVATORIES

Royal Greenwich Observatory

[Herstmonceux: 3171; Greenwich: 1238]

[Abinger: 50]

The Royal Observatory, Greenwich, was established by Charles II in 1675. When international agreement on the selection of a zero or prime meridian from which the longitudes of all places should be measured was sought in 1884, the choice of the meridian through the transit circle of the Royal Observatory was a recognition of the importance of the contributions of the Observatory to astronomical and nautical science. With the growth of London, there has been a progressive deterioration in the conditions for astronomical observations at Greenwich, and the installation of brighter street lighting has made the skies at night too bright for long exposure photography. The removal of the Observatory from Greenwich to Herstmonceux, Sussex, is now in progress. The Admiralty has purchased Herstmonceux Castle, with about 370 acres of ground, as the home for the Royal Observatory. The Castle, built in 1440 and carefully restored and modernized in recent years, is one of the finest early brick buildings in England. It was built by Sir Roger de Fiennes, Treasurer to the Household of Henry VI. It is hoped to complete the removal early in 1957. The removal will entail no change in the prime

Herstmonceux.

H.M. Nautical Almanac Office

Director, H.M. Nautical Almanac Office

Secretary, H.M. Nautical Almanac Office

Principal Assistant, H.M. Nautical Almanac Office

Wellgate.....£1,150 to £1,570

H.M. Nautical Almanac Office

c/o The Royal Greenwich Observatory

The "Nautical Almanac" was first published for 1767 by the Board of Longitude. The Office is now a branch of the Royal Greenwich Observatory. Annual publications—Nautical Almanac, Abridged Nautical Almanac, Air Almanac, Apparent Places of Fundamental Stars, Star Almanac.

Superintendent, D. H. Sadler, O.B.E.

£2,000 to £2,300

Principal Scientific Officers, Mrs. F. McBain Sadler, £1,267 to £1,795; J. G. Porter, Ph.D.

£1,375 to £1,795

Royal Observatory, Cape of Good Hope

The Cape Observatory was founded by order in Council in 1820 to continue in the Southern Hemisphere the work being undertaken by Greenwich in the North. Extensive programmes are carried out to ascertain the positions, distances, magnitudes and radial velocities of stars.

Astronomer, R. H. Stoy, Ph.D.

Chief Assist., D. S. Evans, Ph.D.

Senior Observatory Officers, A. W. J. Cousins, Ph.D.; J. v. B. Lourens.

SCOTLAND

Royal Observatory

Blackford Hill, Edinburgh 9

[Edinburgh: 42303]

The Observatory was founded by the Astronomical Institution in 1818. A few years later it was taken over by the Government, Henderson being appointed Astronomer Royal in 1834. The Observatory was transferred to its present site in 1896. The work of the Observatory is chiefly astrophysical, the major programmes being concerned with stellar spectroscopy and solar phenomena. The Library contains the valuable collection of Lord Crawford.

Astronomer Royal for Scotland (£1,400) and Professor of Astronomy in the University of Edinburgh (£600) (vacant).

Principal Scientific Officers, M. A. Ellison, Sc.D.; H.

E. Butler, Ph.D., £1,150 to £1,570

Senior Scientific Officer, R. Wilson, Ph.D.

£975 to £1,150

PATENT OFFICE

(and Industrial Property Department, Board of Trade).

25 Southampton Buildings, W.C.2

[Holborn: 8721]

The duties of the Department, which deals mainly with the granting of patents, the registration of designs and trade marks, and with questions relating to literary and artistic copyright, are performed by a Comptroller-General with a staff of officials. In 1955 the Patent Office sealed 20,630 (sealed) patents and registered 8,121 designs and 7,884 trade marks.

Comptroller-General, J. L. Girling, £2,850

Private Secretary, Miss I. J. Dunk.

Patent Office Library

The Library (370,000 volumes) is open to the public daily from 10 a.m. to 9 p.m. Mondays to Fridays; Saturdays 10 a.m. to 1 p.m.

Chief Librarian, F. W. Gravell, £1,635 to £1,845

Manchester Office

51 Regent House, Cannon Street, Manchester.

[Blackfriars: 3759]

Keeper of Manchester Branch, W. E. Edwards

£1,285 to £1,530

PAYMASTER GENERAL'S OFFICE

Russell Square House, Russell Square, W.C.1

[Terminus: 3622]

The Paymaster General's Office was formed by

the consolidation in 1835 of various separate pay departments then existing, some of which dated back at least to the Restoration of 1660. Other offices were incorporated in 1848. Its function is that of paying agent for the different Government Departments, other than the Revenue Departments. The majority of its payments are made through banks (to whose accounts the necessary transfers are made at the Bank of England), but cash payments are also made, and the payment of pensions is an important feature of its work. The Establishment expenses were estimated at £390,770 in 1956-57.

Paymaster General (vacant).

Assistant Paymaster-General, J. H. Vetch

£2,000 to £2,600
Dep. Asst. Paymaster Gen., A. Gardner, O.B.E.

PUBLIC RECORD OFFICE

See RECORD OFFICES

PUBLIC TRUSTEE OFFICE

Sardinia Street, Kingsway, W.C.2

[Holborn: 4300]

This is a Government Office (opened in 1908) by means of which the State acts as executor and trustee under a will, or as trustee under a settlement, and in other capacities of a like nature. The value of the trusts accepted up to March 31, 1956, was £614,092,356.

The facts of any trust, new or old, in which it is desired that the Public Trustee should act may be brought to his notice by letter or by personal interview. The appointment is effected in the same way as a private trustee, or by an Order of the Court. He can act solely or jointly with others.

In the case of a will, all that the testator need say is, "I appoint the Public Trustee executor and trustee of this my Will"; or the appointment may be a joint one with others. Executors who have obtained probate can transfer their duties to him under an Order of the Court. He can also act as administrator with, or without, the will annexed.

Strict secrecy is observed in all matters dealt with in the Department. Accounts in simple form are furnished to the beneficiaries as required. An interview with the Public Trustee or with any of his senior officers can be arranged at any time. A pamphlet giving particulars and details of the fees can be obtained free of cost from the Office of the Public Trustee, Kingsway, W.C.2.

PUBLIC WORKS LOAN BOARD

19 Old Jewry, E.C.2

[Monarch: 6234]

The Board is an independent statutory body, consisting of 12 unpaid Commissioners appointed by the Crown to hold office for 4 years; 3 Commissioners retire each year and may be re-appointed.

The functions of the Commissioners, derived chiefly from the Public Works Loans Act, 1875, and the Local Authorities Loans Act, 1945, are to consider applications for loans by Local Authorities and other prescribed bodies, to make loans and to collect the repayments.

Funds for loans are provided by annual Acts of Parliament and are drawn from the Local Loans Fund through the National Debt Commissioners. Rates of interest on the Board's loans and fees to cover management expenses are fixed by the Treasury.

During the year ended March 31, 1956, 9,141 applications for loans totalling £224,160,239 were approved and 16,376 advances totalling £364,338,393 were made.

Secretary, R. L. Atkinson, O.B.E., M.C.

Registrar (National Register of Archives), Miss W. D. Coates.

SCOTTISH RECORD OFFICE

Register House, Edinburgh

[Edinburgh Waverley: 2561]

The Scottish Record Office has a continuous history from the 13th century. Its present home, the General Register House, was founded in 1774 and built to designs by Robert Adam, later modified by Robert Reid. Here are preserved, in accordance with the Treaty of Union, the public records of Scotland and many collections of private muniments lodged with the national records. Search Rooms open daily from 10 to 5; Saturdays, 10 to 1. Museum section open at the same hours in the summer months for exhibitions, and at other times by arrangement. Permanent exhibits include Bull of Pope Honorius III (1218), Declaration of Arbroath (1320), Treaty of Northampton (1328), National Covenant (1638) and Treaty of Union (1707).

DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH

Charles House, 5-11 Regent Street, S.W.1. (Whitehall: 9788.) Scottish Branch Office; 20 Walker Street, Edinburgh 3. (Edinburgh: 34994.) Welsh Branch Office; c/o Welsh Board of Health, Cathays Park, Cardiff (Cardiff: 28066).

A Committee of the Privy Council was appointed by Order in Council dated July 28, 1915 (amended February 6, 1928), to direct the application of any sums of money provided by Parliament for the organization and development of Scientific and Industrial Research. On December 15, 1916, a separate Department was created for the service of the Committee. The Department of Scientific and Industrial Research Act, 1956, placed the Department under a Research Council, and re-defined the Department's functions and the purposes for which it may make grants.

The aggregate net estimate for the Department in 1956-57 amounts to £7,552,100, a net increase of £1,023,930 on the same estimate for 1955-56. The gross estimate amounts to £8,468,622. Headquarters administration, £417,000; Grants for Research, £2,447,000; Research Work and Research Establishments, £4,575,000; American Aid, £95,000; European Nuclear Research, £930,000, and other international bodies, £4,500.

President of the Committee of the Privy Council, The Lord President of the Council.
